

# **Using Mass Incarceration and the Affordable Care Act to Improve the Health of Those Who *Aren't* Incarcerated**

Christopher Wildeman  
Yale University

December 5, 2012

# I have only one major suggestion

- ▶ But I think it seizes on a massive opportunity

# I have only one major suggestion

- ▶ But I think it seizes on a massive opportunity.

# Mass incarceration as a health intervention

- ▶ Much research sees mass incarceration as a health intervention, with some positive and some negative effects.
- ▶ To that end, we talk a great deal about how to minimize the negatives of mass incarceration and maximize the positives.

# Mass incarceration as a health intervention

- ▶ Much research sees mass incarceration as a health intervention, with some positive and some negative effects.
- ▶ To that end, we talk a great deal about how to minimize the negatives of mass incarceration and maximize the positives.

# Mass incarceration as a health intervention

- ▶ Much research sees mass incarceration as a health intervention, with some positive and some negative effects.
- ▶ To that end, we talk a great deal about how to minimize the negatives of mass incarceration and maximize the positives.

# But we need to think more broadly (1)

- ▶ The incarcerated are not the only vulnerable population here
- ▶ Indeed, their families and friends also experience many of the same conditions they faced prior to incarceration, so we should expect their health to also be suboptimal – and this doesn't assume that family member incarceration harms health.
- ▶ (There is mounting evidence that it does, however.)

## But we need to think more broadly (1)

- ▶ The incarcerated are not the only vulnerable population here.
- ▶ Indeed, their **families and friends** also experience many of the same conditions they faced prior to incarceration, so we should expect their health to also be suboptimal – and this doesn't assume that family member incarceration harms health.
- ▶ (There is mounting evidence that it does, however.)

- ▶ (There is mounting evidence that it does, however.)

## But we need to think more broadly (2)

- ▶ The population of individuals tied to inmates such (as their family members) is far larger than the population of inmates
- ▶ So the public health impact of getting those folks enrolled in healthcare, which many of them are not, could be huge

## But we need to think more broadly (2)

- ▶ The population of individuals tied to inmates such (as their family members) is far larger than the population of inmates.

- ▶ The population of individuals tied to inmates such (as their family members) is far larger than the population of inmates.
- ▶ So the public health impact of getting those folks enrolled in healthcare, which many of them are not, could be huge.

# To that end

- ▶ I propose using prison and jail admission as an opportunity to get this vulnerable population signed up using information gleaned from their recently incarcerated family members.
- ▶ Many folks would not want to provide information on their family members to government officials, so it seems like this is a policy intervention that would also need external buy-in.

## To that end

- ▶ I propose using prison and jail admission as an opportunity to get this vulnerable population signed up using information gleaned from their recently incarcerated family members.
- ▶ Many folks would not want to provide information on their family members to government officials, so it seems like this is a policy intervention that would also need external buy-in.

- ▶ Many folks would not want to provide information on their family members to government officials, so it seems like this is a policy intervention that would also need external buy-in.

# Even if you don't like that suggestion

- We still need to think of ways to enhance the health of vulnerable populations through interventions that involve individuals connected to current and former inmates.

## Even if you don't like that suggestion

- ▶ We still need to think of ways to enhance the health of vulnerable populations through interventions that involve individuals connected to current and former inmates.
