# Context 2

Toward Improved Visualization of Unstructured Information

The definition:

Visualization in the context of large, unstructured, changing data sets where the relevance, significance, and conceptual links among the data have yet to be discovered

## Preliminary thoughts

Effective visualization of structured data is challenging

Unstructured data requires some type of structural mapping

- . The data discovery and analysis will be imperfect
- . The mapping will be imperfect, and task dependent

# An Example of Real Data

Toward Improved Visualization of Unstructured Information

A real-world story of intrigue...

About a cell of conspiring individuals...

Who set forth on a project...

Constrained by time and money...

Characterized by deception...

To advance their own cause.

The plot is ultimately discovered...

But not before the mission is accomplished.

# The Players and Their Motivation

Toward Improved Visualization of Unstructured Information

# The Strategy

Toward Improved Visualization of Unstructured Information

## Discovering “Project X”

Exploratory analysis...

is there some data that conforms to some pattern?

# The Investigation

Toward Improved Visualization of Unstructured Information

## Discovering “Project X”

Refining the pattern...but only some of the pattern is observable in the unstructured, varied, uncertain and continuously updated data

Retrospective analysis? Or prospective analysis?

# The Observables

Toward Improved Visualization of Unstructured Information

Establish aliases for purchase agents, and incorporate

## Relevant observations, (semi-)notional:

	COMPANY NAME	POC	STATE	DATE	
■ (	Compass East Group,	Roy Davis,	Delaware,	7 December 1964	)
■ (	Tomahawk Properties, Inc.,	Bob Price,	Florida,	January 1965	)
■ (	Latin-American Dev. and Mgmt. Corp.,	Roy Davis,	Florida,	February 1965	)
■ (	Ayefour Corporation,	Bob Price,	Florida,	February 1965	)
■ (	Bay Lake Properties, Inc.,	Bob Price,	Florida,	March 1965	)
■ (	Reedy Creek Ranch, Inc.,	M. T. Lott,	Florida,	June 1965	)

BTW... These entities are uncertain!!

Important information is dominated by irrelevant data

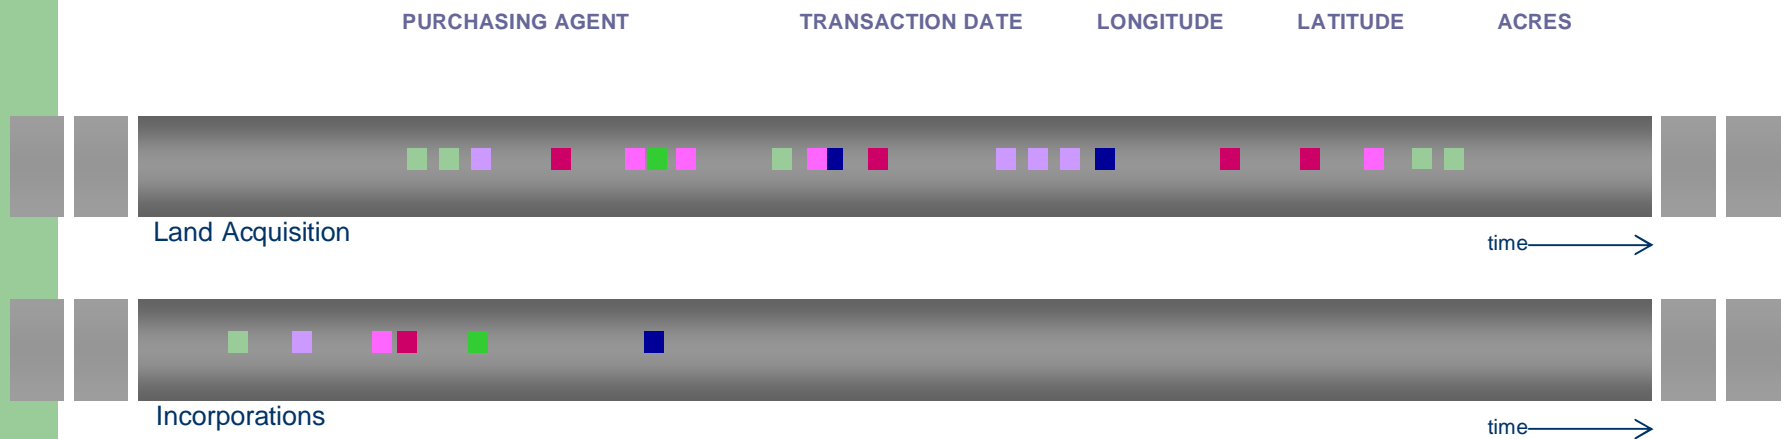

There's very little evidence on which to base decisions...

# More Observables

Toward Improved Visualization of Unstructured Information

## Purchase land

### Relevant observations:

The plot begins to unfold...

Correlated events emerge (both within and across streams)

# The Discovery

Toward Improved Visualization of Unstructured Information

## Orlando Sentinel

Dateline—May 4, 1965

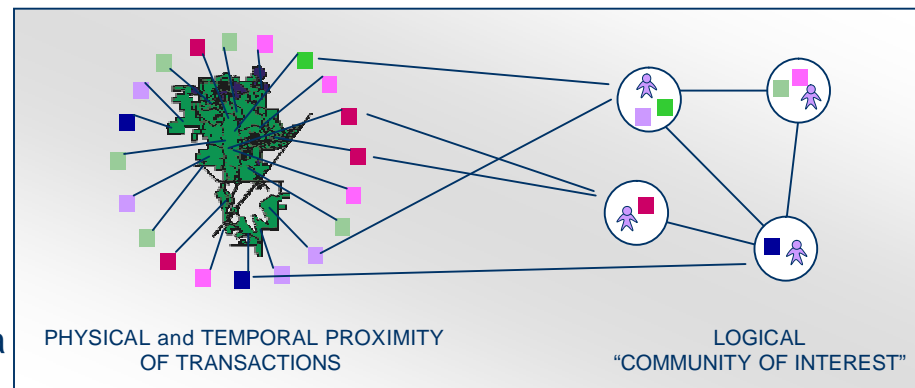

Reported that two real estate transactions totaling over \$1.5 million had been made...for nearly 9,000 acres of land near the small Florida farming town of Orlando

Dateline—October 20, 1965

Reported that Walt Disney was secretly behind the purchase of land

## Challenges

Vagueness (Dynamism) of Hypotheses  
Unknown Sources of Data and Information  
Relevant Data Concealed by “Noise”  
Uncertain and Erroneous Observations  
(Causally) Incomplete Context...Missing Data  
Logical and Physical Structures

# But It Was Too Late

Toward Improved Visualization of Unstructured Information

## Disney's "Project X"

Began in the early 1960's

The Florida site was selected on November 22, 1963

Ayefour Corporation buys the first parcel of land on October 23, 1964

An official announcement was made by Disney on November 15, 1965

They had acquired 27,443 acres of land SW of Orlando...

And they had "big plans"

What did it cost? About \$185/acre, on average

The first acre: \$80

The final acre: \$80,000

# Why is This Context Interesting?

Toward Improved Visualization of Unstructured Information

The definition:

Visualization in the context of large, unstructured, changing data sets where the relevance, significance, and conceptual links among the data have yet to be discovered

To enable understanding!

Reactions and discussion

# Reactions and Discussion...

Toward Improved Visualization of Unstructured Information

Context 2...the definition:

Visualization in the context of large, unstructured, changing data sets where the relevance, significance, and conceptual links among the data have yet to be discovered

## Yesterday's Discussion...

Perception and cognition of visualization

Reasoning under uncertainty

# Perception and Cognition of Visualization

Toward Improved Visualization of Unstructured Information

## Map-making

### Simplification

What's important? **Who's the intended audience?**  
How might we measure interpretability?

### Classification

### Symbolization

### Induction

## Visualize...

### Existence

Notation on a map that a point or area exists

### Associative existence

Added absolute or relative quantity to the identified points and areas

### Spatially associated existence

Spatial relationships between points and areas

This representation of the Orlando metropolitan area is targeted at tourists...

Maps are a specific type of diagram with which most people have experience

# Perception and Cognition of Visualization

Toward Improved Visualization of Unstructured Information

How can we capture the dynamic nature of data?

Maps are snapshots...but they require little additional training

Can we place thematic overlays on top of term-document landscapes?  
as a means of creating different views of the same data...

How do we encourage interactivity?

What can't be represented using topography only?

For unstructured data...

What kind of mappings can we impose?

Some structure may be due to contact or context (not content)...

What might roads represent?

What about rest areas? National Parks? Hospitals?

How is uncertainty represented?

# Reasoning Under Uncertainty

Toward Improved Visualization of Unstructured Information

A critical aspect of Context 2

Visualization of the hypotheses...

Capture the intent of the task and subject matter expertise

Guide the exploration and analysis

Customize the visualization

# Reasoning Under Uncertainty

Toward Improved Visualization of Unstructured Information

Multiple (competing) hypotheses

Alternative models, at the onset...

or after improved/diminished understanding

Machine-learning can (should?) offer data as...

Supporting evidence

Contradictory evidence

Change in the actual plan

Changing world events

# What to Visualize?

Toward Improved Visualization of Unstructured Information

How do we decide what's important?

We (probably) don't need all of these observations?

# Final Thoughts

Toward Improved Visualization of Unstructured Information

So...

Visualization influences hypothesis generation

Hypothesis generation influences analysis

Analysis influences visualization

# Reactions and Discussion...

Toward Improved Visualization of Unstructured Information

Select relevant information from assembled data

Impose some kind of structure...

Apply graphic techniques

To enable understanding...

**Challenges**

Vagueness (Dynamism) of Hypotheses  
Unknown Sources of Data and Information  
Relevant Data Concealed by "Noise"  
Uncertain and Erroneous Observations  
(Causally) Incomplete Context...Missing Data  
Logical and Physical Structures
