

Federal Funding Issues: the Needs of the Medical Examiner

J.C. Upshaw Downs, MD

BOD & Chair, NAME Governmental Affairs Committee

Vice-Chair, CFSO

Coastal Regional Medical Examiner, GBI, Savannah

Major Federal Issues

- Status
 - Workforce
 - Resources
- Uniform anatomical gift act
- Available federal funds – Coverdell NFSIA
- Disaster preparedness
- Unidentified dead
- Technology/research

NIJ Journal No. 256 • January 2007

**Missing Persons and Unidentified Remains:
The Nation's Silent Mass Disaster**

“The Bureau of Justice Statistics is finalizing a comprehensive census of the Nation’s medical examiners and coroners. This study—expected to be published in *early 2007*—*will* examine data from 2,000 medical examiners and coroners and *focus on the issue of unidentified human remains* .”

Uniform Anatomical Gift Act (UAGA)

- Disposition of remains
prohibitions/limits
- *Primum non nocere*
- Evidence
- Autonomy/authority

Program Description and Purpose

The Paul Coverdell Forensic Science Improvement Grants Program (the Coverdell program) awards grants to States and units of local government to help improve the quality and timeliness of forensic science and medical examiner services. Among other things, funds may be used to eliminate a backlog in the analysis of forensic evidence; and to train and employ forensic laboratory personnel, as needed, to eliminate such a backlog. States may apply for both "base" (formula) and competitive funds. Units of local government may apply for competitive funds.

All the eggs in one basket...

DNA Initiative - \$1B over 5 years

Coverdell Forensic Science Improvement Grant Program

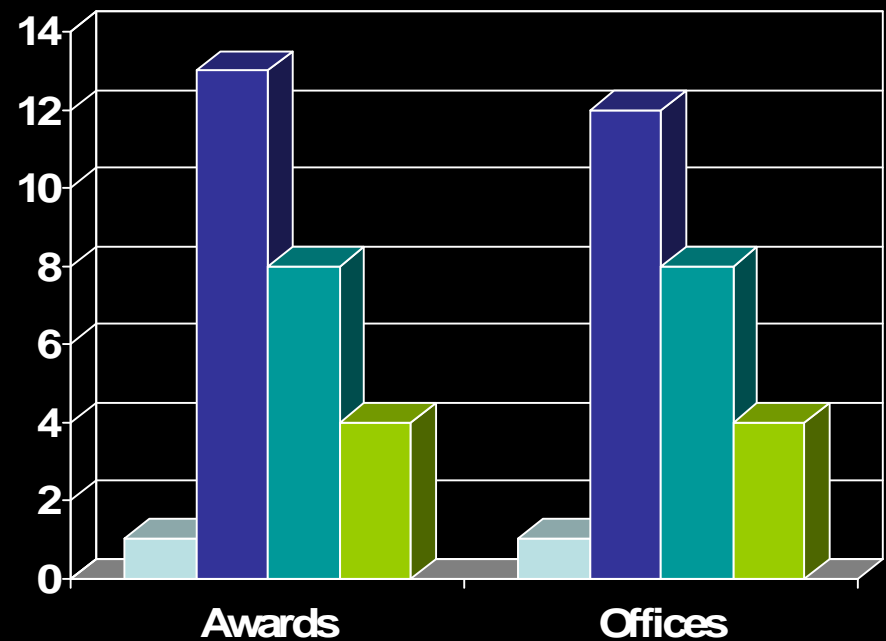

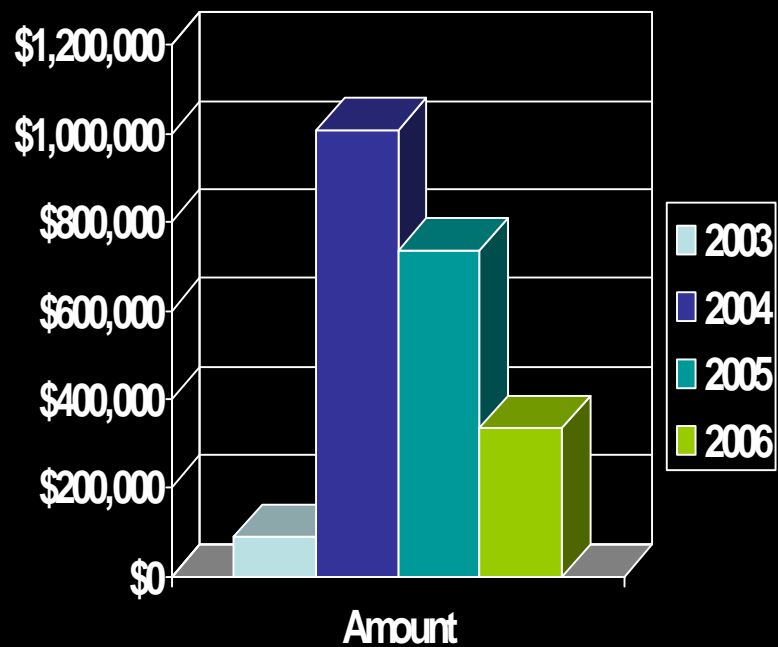

'Backlog' Defined

- A backlog in the analysis of forensic science evidence exists if forensic evidence has been stored in a laboratory, medical examiner's office, coroner's office, law enforcement storage facility, or medical facility, and has not been subjected to all appropriate forensic testing because of a lack of resources or personnel.

Coverdell Forensic Science Improvement Grant Program

- Forensic science (crime lab) & medical examiner services
- States & local government units
- Uses
 - improve the quality and timeliness
 - eliminate/reduce backlogs, including
 - firearms examination
 - latent prints
 - toxicology
 - controlled substances
 - forensic pathology
 - questioned documents
 - trace evidence
 - train & employ forensic laboratory personnel (backlog)
- Program leading to accreditation

Why do we have DMORT?

To assist local authorities during a: **Mass Fatality Incident**

A Mass fatality incident can be defined as:

'An incident where more deaths occur than can be handled by local resources'

DMORT is a program of the U.S. Department of Homeland Security that responds **ONLY** when requested. DMORT may be requested by any municipality in need by going through the departmental procedures for requesting federal assistance. Please contact your local **Emergency Management Agency** for further information on requesting federal assistance.

Issues

- Recognized disaster
- Direction of teams
- Part-time job
 - variable skills

Missing Persons and Unidentified Remains: The Nation's Silent Mass Disaster

by Nancy Ritter

About the Author

Nancy Ritter is a writer/editor at the National Institute of Justice and Editor of the *NIJ Journal*.

If you ask most Americans about a mass disaster, they're likely to think of the 9/11 attacks on the World Trade Center, Hurricane Katrina, or the Southeast Asian tsunami. Very few people—including law enforcement officials—would think of the number of missing persons and unidentified human remains in our Nation as a crisis. It is, however, what experts call "a mass disaster over time."

NIJ Journal No. 256 • January 2007

**Missing Persons and Unidentified Remains:
The Nation's Silent Mass Disaster**

“Very few people—including law enforcement officials—would think of the number of missing persons and unidentified human remains in our Nation as a crisis. It is, however, what experts call ‘a mass disaster over time.’”

Identifying Remains: Lessons Learned From 9/11

by Nancy Ritter

About the Author

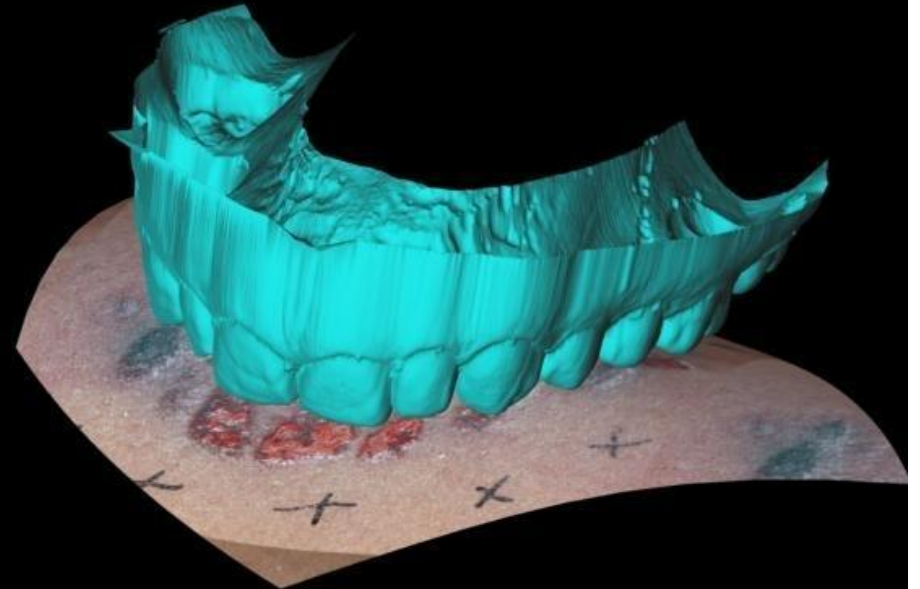

Nancy Ritter is a writer/editor at the National Institute of Justice and Editor of the *NIJ Journal*.

Nothing in the history of mass fatality events prepared America's forensic community for the task of identifying those who died when terrorists attacked the World Trade Center in New York City on September 11, 2001. The number of victims, the condition of their remains, and the duration of the recovery effort made their identification the greatest forensic challenge ever undertaken in this country.
