

# **Federated Identity, InCommon and the Science Agencies**

Dr Ken Klingenstein  
Director, Internet2 Middleware and Security

# Topics

- Federated identity basics
- InCommon update
- Levels of assurance (LOA)
  - ICAM - Bronze, Silver and Gold
  - Assessing the domain and collaboration apps
  - Assessing the research administration apps
- InCommon and the science agencies
  - NIH
  - NSF
  - Dept of Energy

# Basics of federated identity

- Leverages institutional identity and authentication for inter-institutional use
- Based on SAML software, such as Shibboleth
- Industry tends to think of bilateral federated identity, e.g. for outsourcing; R&E does multilateral federations for collaborations and research and ...
- Provides privacy and security
- Extra value in passing attributes for access control

# Growth of Federated Identity

- InCommon continues exponential growth, greater than 4M users, 200 major universities, research centers, and companies
- Internationally, growth is even more rapid; 25+ countries representing > 100M users
- Typical organization (Penn State) does 70,000 transactions a day with trust based on InCommon; reduces help desk cost by 85%
- Used for financial transactions, scholarly content access, access to national scientific resources, collaboration tools, social networking, etc.

#### [Hypertext Atlas of Rare Lymphomas, version 0.51 January 2010](#)

Hypertext Atlas of Rare Lymphomas contains clinical and histological images: histological images available in very high resolution. The Atlas is available in:

#### [Hypertext atlas of Pathology, version 1.80 January 2010](#)

Hypertext Atlas of Organ Pathology contains teaching materials for pre-grad students. It contains only chapters with images to enable image sharing (see below). The Atlas is available in: English, German, French, Spanish, Italian, Portuguese, Dutch, Polish, Czech, and Russian. It also contains images from CT and MRI scanners and endoscopes.

#### [Demo page of the Atlas](#)

This page demonstrates technologies used in the Atlas on selected images.

#### [Tool for sharing images of this atlas in your HTML documents](#)

Images from our atlases can be (for teaching purposes) shared in your HTML documents. The functionality of the atlas (arrows, virtual microscope)

#### [Discussion forum for users of the atlases](#)

Registered users can discuss individual atlases (contents as well as technical issues).

Please select the language:  English  Czech

**Free registration is required to use the atlases. If you are not registered, click here to register.**

Atlases are accessible also through the identity federations. If you have an account in one of the following federations, you can log in directly:

# Multiple levels of assurance

- Defines the risks of an incorrect authentication to an application and identifies appropriate technologies and business processes for mitigating the risk
  - LOA 1 for wikis, outreach, etc
  - LOA 2 for grant administration
  - LOA 3/4 for sensitive data and apps
- Step-up processes to integrate user experience

# ICAM

- Current initiative by US Government to leverage external credentials for government apps, by officials, institutions and businesses and consumers
- Best but still fragile in a long list of such government efforts
- Will formalize much of the federated activities now underway
- Progress succeeds steadily in the meantime

# InCommon LOA

- InCommon – today's federation
- Bronze - A campus researcher uses their campus account to access an NIH clinical trial wiki
- Silver – A sponsored research accountant uses their secure campus account to modify documents on NSF Fastlane
- Gold - A campus security officer could use their local two factor authentication to participate in a Teragrid security incident

# InCommon and NIH

- Pioneering work started with federated access to controlled wikis
- CTSA wikis piloted with six institutions; now up to 75, all user driven
- Help desk calls drop dramatically
- NIH staff starting to use their identities externally
- Silver applications now moving forward –
  - eRA – 22 applications
  - caBIG and BIRN

# InCommon and NSF

- Centerpiece is research.gov
- Uses:
  - Grant submission
  - Grant management
- Teragrid
  - CI login
  - Federated incident handling

# InCommon and Energy

- Starting an aggressive program to federate labs and layer trust and services on top of InCommon
- Will likely add stronger levels of authentication, maybe some additional attributes/schema
- One additional focus is the citizen science capabilities
