

# Global Sustainability – The Influence of Business on the Transition

## Objectives:

- Understand progress that global corporations have made in transitioning to sustainability over the last 20 years.
- Identify national and international policies and regulations that have promoted or impeded the transition both internally within companies and externally.
- Examine metrics and tools used to measure progress.
- Assess the role of science and technology in facilitating the development of more sustainable processes and products.
- What are/were the drivers for adopting and pursuing a sustainability strategy.
- Next steps for the Roundtable (?)
