

The Water-Energy NEXUS

Managing the energy footprint of water — and the water footprint of energy — is a two-pronged challenge. Today's water and energy providers and business leaders across multiple industries must address the challenge of sustaining both these essential resources to ensure future success.

Challenges facing today's industry

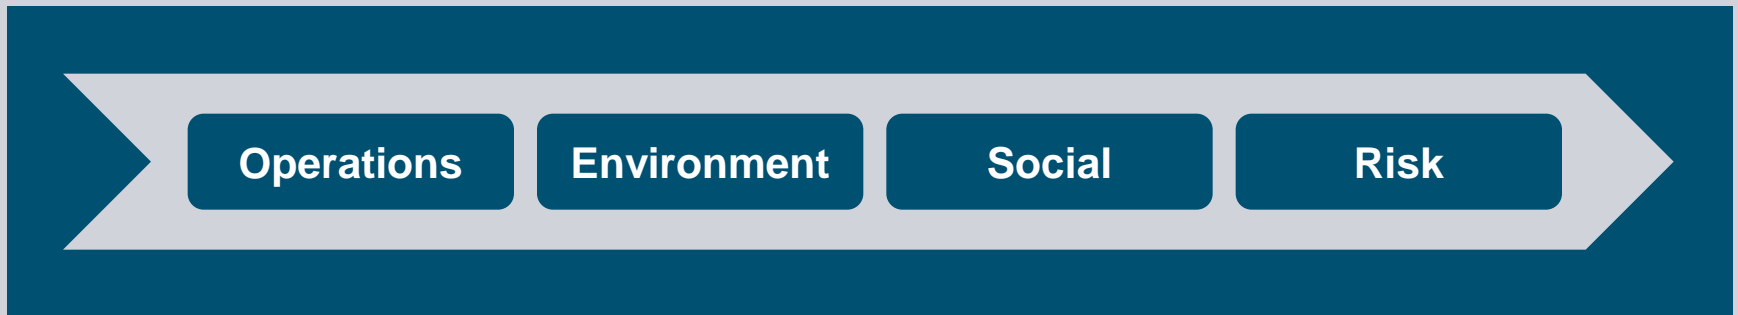

- The cost of doing business continues to rise
- Growth is expected in an extremely competitive environment
- Environmental and social pressures are massive
- We need to modernize
- Our business needs to be sustainable
- We are aware of the need to change
- We need to act now

Comprehensive strategies that align your drivers

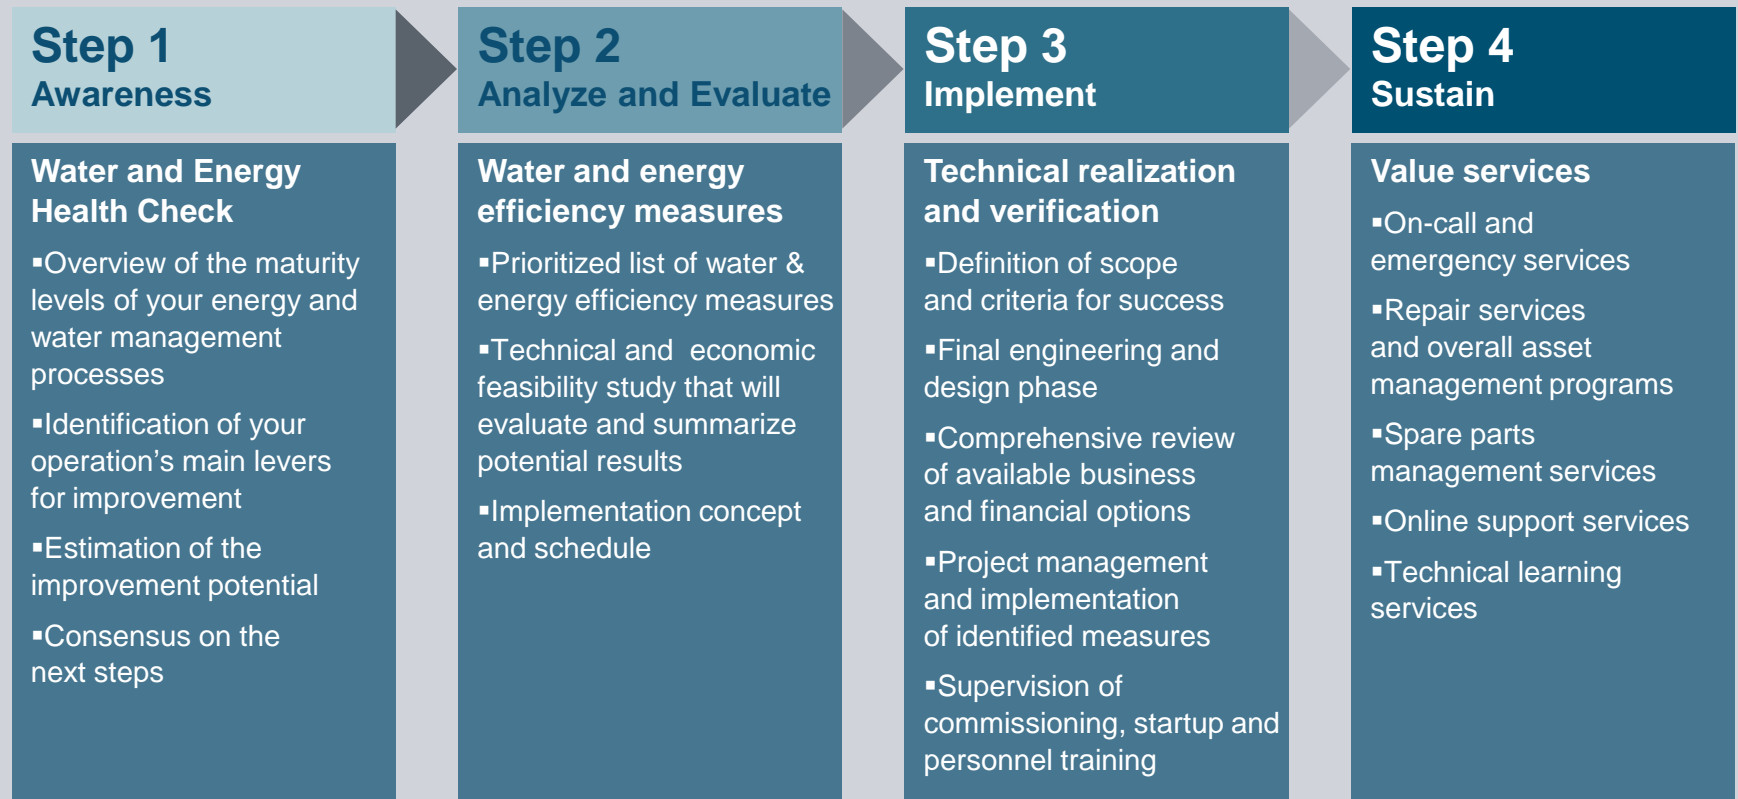

SIEMENS

Siemens integrates water and energy solutions to help our clients achieve continuous sustainable improvement with lower total cost of ownership.

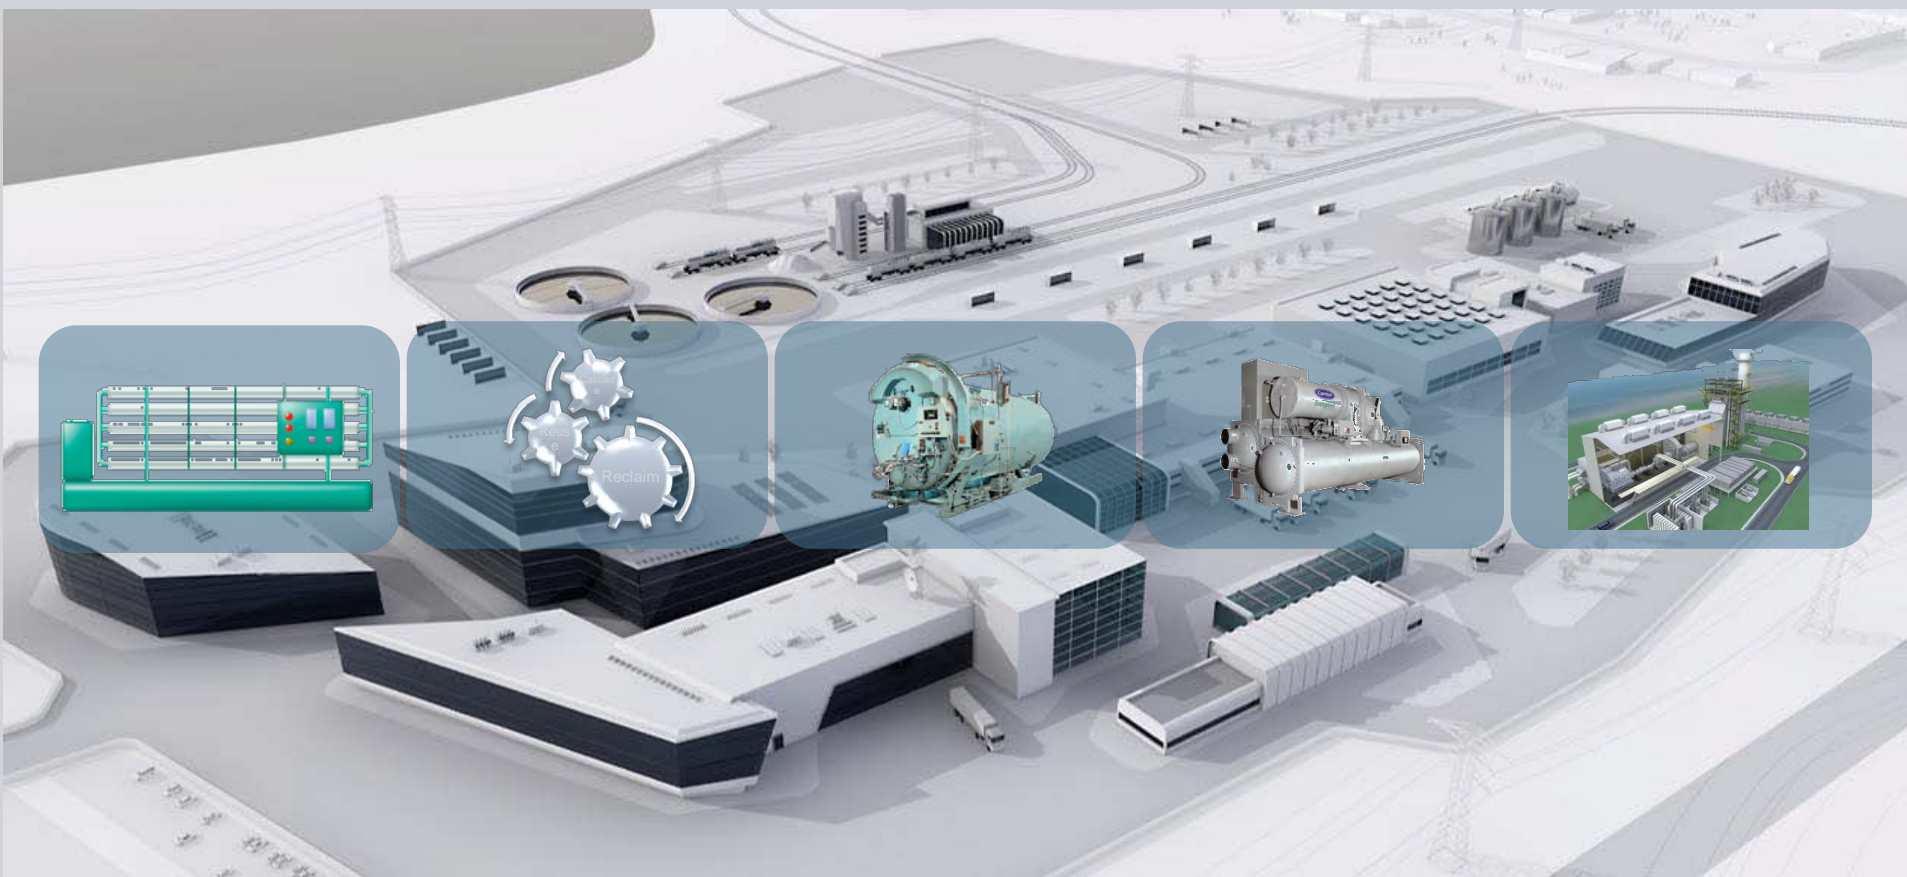

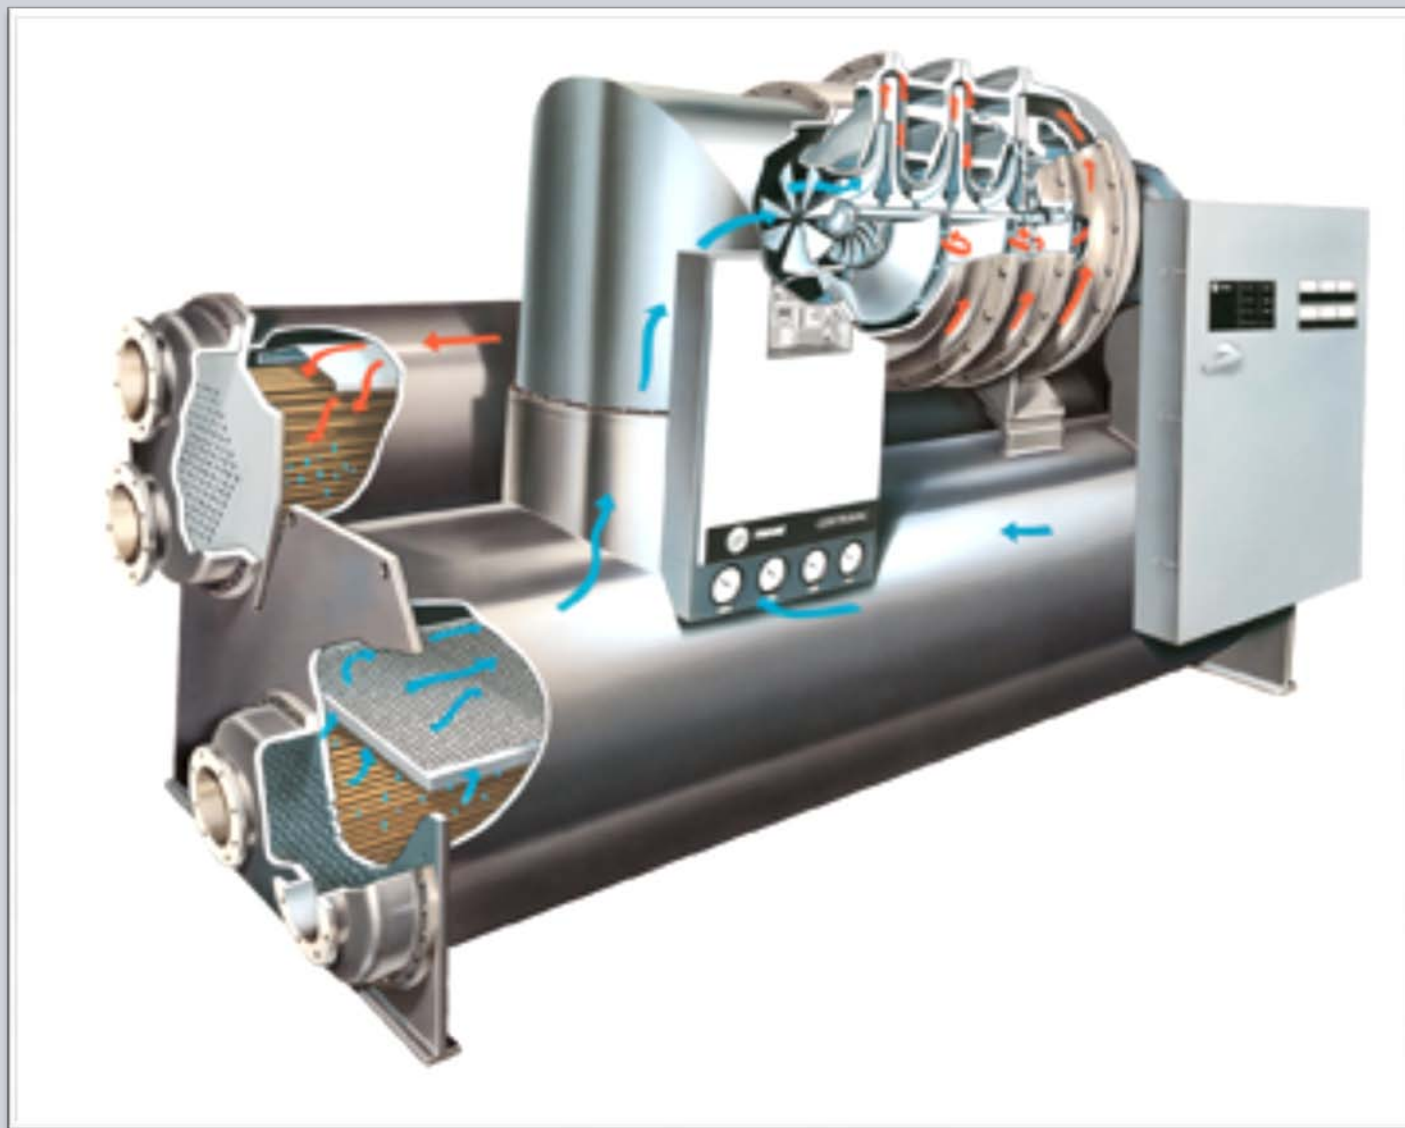

INTEGRATED WATER AND ENERGY SUSTAINABILITY PLATFORM

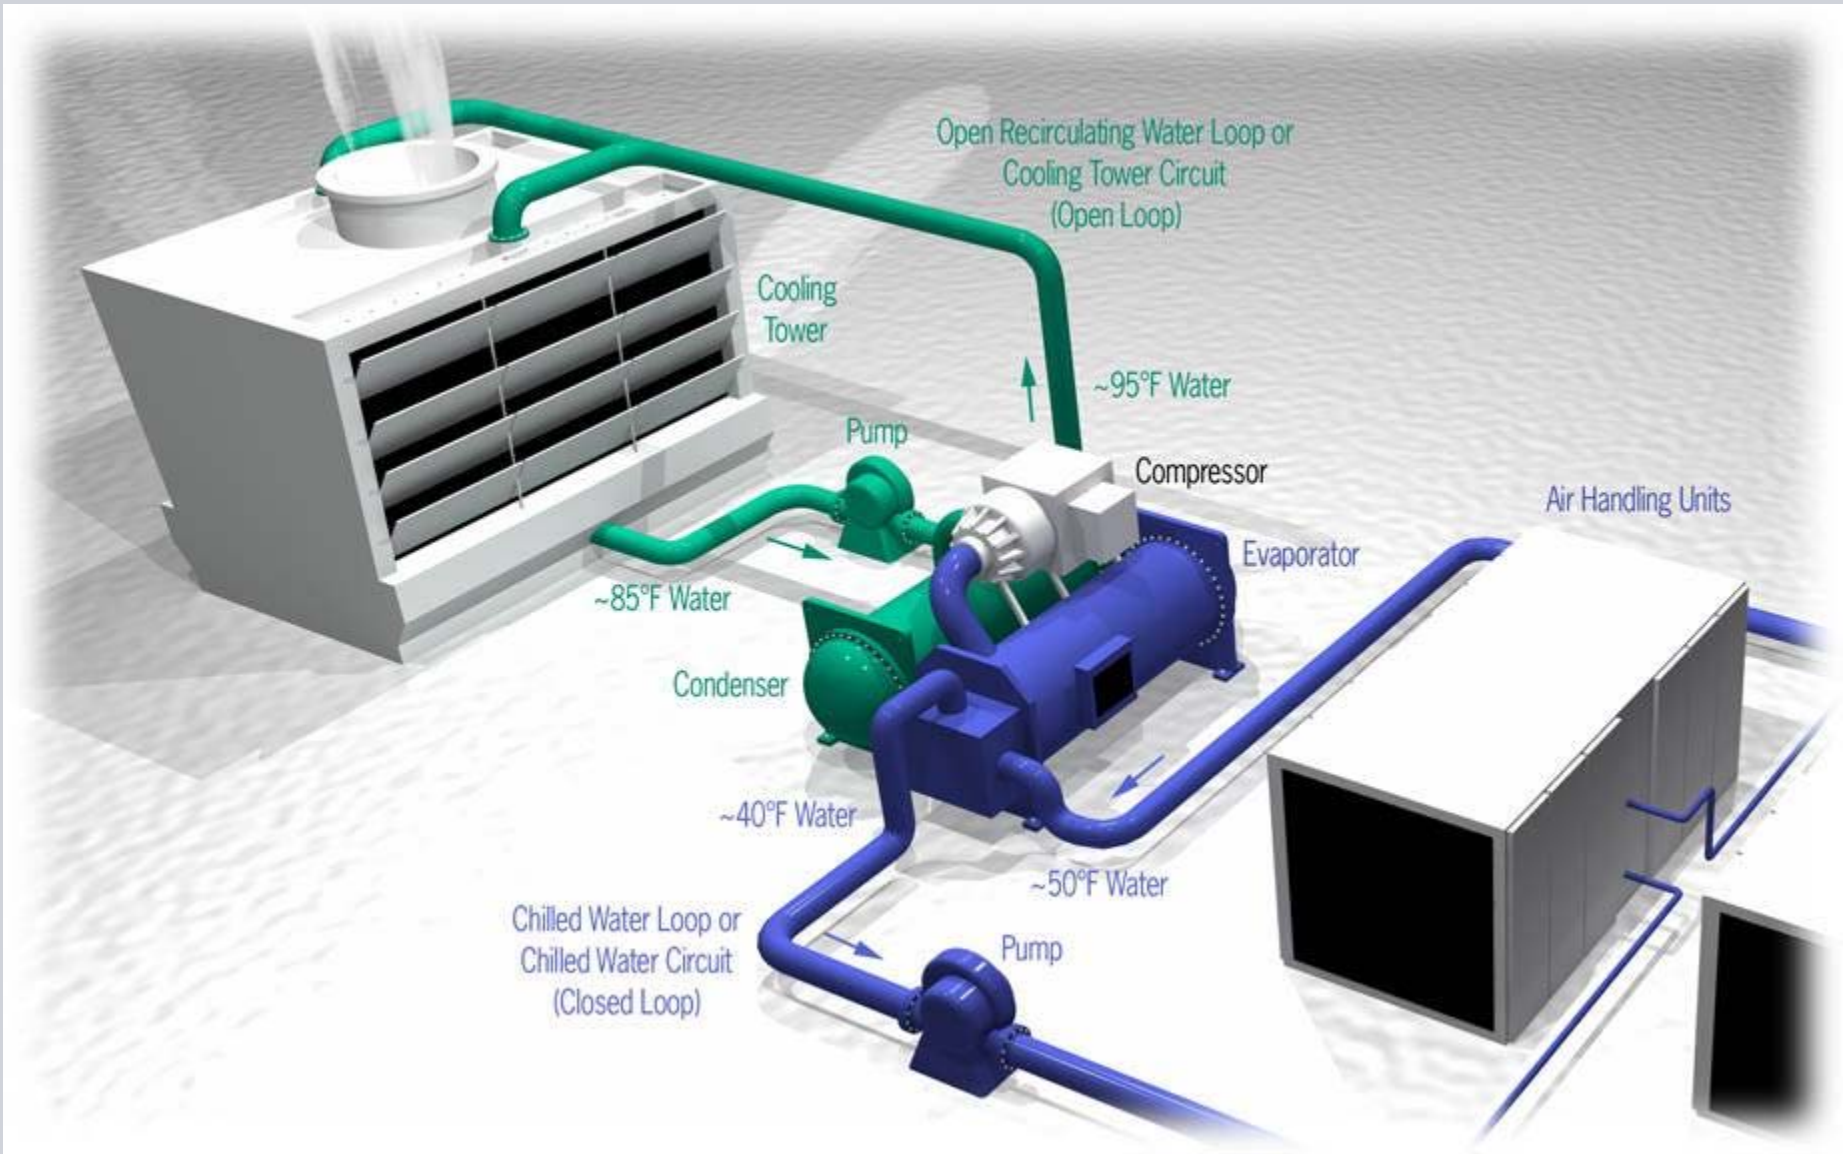

The 'concept to construction' approach identifies, evaluates and realizes improvements
