

The Big Data Revolution: What Does It Mean for Research?

Government-University-Industry Research Roundtable Meeting

**** GUIRR celebrates 30 years! ****

October 14-15, 2014

The advent and pervasive nature of big data and what it means for science is being realized every day. This meeting will focus on how big data is changing the way we do science, looking particularly at the challenges of working with and analyzing big data sets, ethics and privacy concerns, workforce and training issues, and opportunities for public-private partnerships. While acknowledgement will be made of the technical side of big data, our discussion will focus primarily on the role and impact of big data in scholarly research.
