Take-Aways

What's the value of the NCA?
-   Public awareness
-   Decision support

Uneasily perched between the two

Take-Aways

Classes/typologies
- Of decisions and decision makers
- Of decision problems
- Of decision-making frameworks
- Of hazard types

Bounding the problem from above is extremely important
- Single most relevant analytic output
- Many analyses of consequences flow naturally from this

Take-Aways

Constructing a risk assessment report
- Without coproduction, we're still living the linear model
- Guidance to authors much less useful without active facilitation
- Consensus is not always useful

Take-Aways

But probably a lot more of the NCA should be about responses and solutions and not just risks
