# JASON-1

**Jason-1 is a joint mission between France and the U.S. to monitor global ocean circulation, to improve global climate predictions, and to monitor events such as El Niño Southern Oscillation conditions and ocean eddies. Applications: coastal zone management, disaster management.**

## LAUNCH:

- Date: December 7, 2001

## ORBIT:

- Altitude: 1,336 km
- Inclination: 66 degrees
- Period: 122.4 minutes
- Repeat Cycle: 10 days
- Non-Sun-Synchronous

## DESIGN LIFE:

- 5 years

## INSTRUMENTS:

- Laser retroreflector array
- TOPEX radar altimeter 13.6 and 5.3 GHz
- Poseidon-2 radar altimeter 13.65 GHz
- DORIS (Doppler Orbitography and Radiopositioning Integrated by Satellite) receiver
- Jason Microwave Radiometer
- Turbo Rogue Space Receiver GPS tracking system

## MEASUREMENTS:

- Brightness temperature
- Water vapor content
- Liquid water content
- Ocean topography

## Tsunami - Jason data

**Aura hosts a suite of scientific instruments designed to make the most comprehensive measurements of atmospheric trace gases ever undertaken. The mission measures ozone, aerosols, and several key atmospheric constituents that play an important role in atmospheric chemistry, air quality, and climate. The United Kingdom and The Netherlands are providing some of the instruments for this mission. Applications: air quality management, carbon management, energy forecasting, public health.**

**LAUNCH:**

- Date: Summer, 2004

**ORBIT:**

- Altitude: 705 km
- Inclination: 98.2 degrees
- Period: 100 minutes
- Repeat Cycle: 16 days
- Sun-Synchronous, Polar

**DESIGN LIFE:**

- 3 years

**INSTRUMENTS:**

- OMI (Ozone Monitoring Instrument)
- MLS (Microwave Limb Sounder)
  - 118 GHz Primarily for temperature and pressure
  - 190 GHz Primarily for  $\text{H}_2\text{O}$ ,  $\text{HNO}_3$ ,
  - 240 GHz Primarily for  $\text{O}_3$  and  $\text{CO}$
  - 640 GHz Primarily for  $\text{N}_2\text{O}$ ,  $\text{HCl}$ ,  $\text{ClO}$ ,  $\text{HOCl}$ ,  $\text{BrO}$ ,  $\text{HO}_2$ , and  $\text{SO}_2$
  - 2.5 THz Primarily for  $\text{OH}$
- TES (Tropospheric Emission Spectrometer)
- HIRDLS (High Resolution Dynamics Limb Sounder)

**MEASUREMENTS:**

- Molecular species distribution
- Aerosol index, ozone content, reflectivity, erythral UV exposure, surface radiance
- Temperature and the locations of polar stratospheric clouds and cloud tops

# CloudSat

**CloudSAT, a cooperative mission with Canada, will use advanced radar to "slice" through clouds to see their vertical structure, providing a completely new observational capability from space. CloudSAT will look at the structure, composition, and effects of clouds and will be one of the first satellites to study clouds on a global basis. Applications: air quality management, aviation safety, disaster management, energy forecasting, water management and conservation.**

## **LAUNCH:**

- Date: 2005

## **ORBIT:**

- Altitude: 705 km
- Inclination: 98.2 degrees
- Period: 99 minutes
- Sun-Synchronous

## **DESIGN LIFE:**

- 2 years

## **INSTRUMENTS:**

- CPR (Cloud Profiling Radar- 94 GHz )

## **MEASUREMENTS:**

- Cloud properties

# ***NPOESS - National Polar-orbiting Operational Environmental Satellite System***

**The National Polar-orbiting Operational Environmental Satellite System (NPOESS) will provide the U.S. with an enduring capability to measure atmospheric, land, and oceanic environmental parameters globally. The system will provide timely and accurate weather and environmental data to weather forecasters, military commanders, civilian leaders, and the scientific community. The current plan is for the NPOESS constellation to consist of three polar-orbiting satellites. Each satellite will be designed for a 7-year lifetime and will host 10 to 12 sensor payloads. Applications: agricultural competitiveness, air quality management, disaster management, energy forecasting, homeland security, public health, water management and conservation.**

## **LAUNCH:**

- Date: September 1, 2010

## **ORBIT:**

- Altitude: 833 km
- Inclination: 98.75 degrees
- Period: 101 minutes
- Sun-Synchronous

## **DESIGN LIFE:**

- 5 years

## **INSTRUMENTS:**

- VIIRS (Visible/Infrared Imager/Radiometer Suite)
- CMIS (Conical Microwave Imager/Sounder 6.6, 18.7, 36.5, 60.4 GHz )
- CrIS (Crosstrack Infrared Sounder)
- GPSOS (Global Positioning System Occultation Sensor)
- OMPS (Ozone Mapping and Profiler Suite)
- SESS (Space Environment Sensor Suite)

## **MEASUREMENTS:**

- Atmospheric temperature and water vapor profiles
- Electron density and ionospheric profiles
- Vertical and horizontal distribution of ozone
- Total solar irradiance and solar spectral irradiance
- Earth radiation budget, land/water and sea surface temperature, ocean color, and low light imagery
- Characteristics of auroral boundary

# Aquarius

**Aquarius is a focused satellite mission to measure global sea surface salinity (SSS). Aquarius will resolve missing physical processes that link the water cycle, the climate, and the ocean. The Aquarius science goals are to observe and model the processes that relate salinity variations to climatic changes in the global cycling of water and to understand how these variations influence the general ocean circulation. One application of the Aquarius mission data will be to benefit coastal zone management.**

## LAUNCH:

- Date: 2008

## ORBIT:

- Altitude: 600 km
- Repeat Cycle: 8 days
- Sun-Synchronous
- DESIGN LIFE:

- 3 years

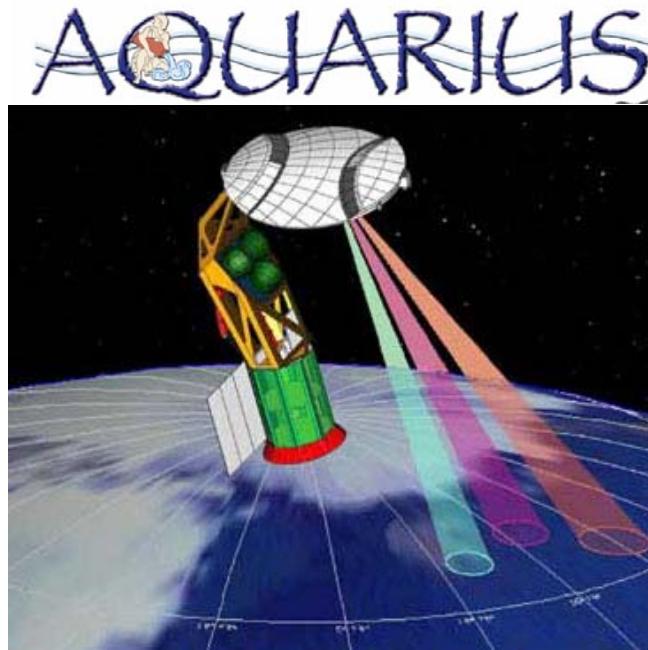

## INSTRUMENTS:

- Radiometer/Scatterometer

Radiometers at 1.413 GHz  
Scatterometer at 1.26 GHz

## MEASUREMENTS:

- Seawater emissivity sensitive to salinity

Routine Ship and Buoy Observations

One Month of Aquarius

## ***GPM – Global Precipitation Mapper***

***GPM is a joint mission with the National Space Development Agency (NASDA) of Japan and other international partners. Building upon the success of the Tropical Rainfall Measuring Mission (TRMM), GPM will initiate global precipitation measurement, a key climate factor. Its science objectives are to improve ongoing efforts to predict climate by providing near-global measurement of precipitation, its distribution, and physical processes; to improve the accuracy of weather and precipitation forecasts through more accurate measurement of rain rates and latent heating; and to provide more frequent and complete sampling of the Earth's precipitation. Applications: agricultural competitiveness, disaster management, water management and conservation.***

### **MEASUREMENTS:**

- Cloud structure and precipitation characteristics including rain rate, cloud type, 3D cloud structure, and drop-size distribution
- Global precipitation

### **LAUNCH:**

•Date: November 2007

### **ORBIT:**

- Altitude: 400 km
- Inclination: 65 degrees
- Sun-Synchronous

### **DESIGN LIFE:**

- 3 years

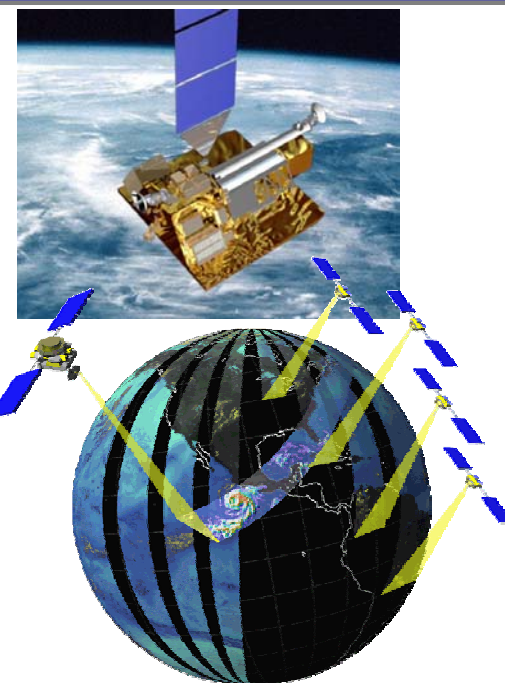

### **INSTRUMENTS:**

- DPR (Dual-frequency Precipitation Radar)
  - KuPR 13.597 & 13.603 GHz
  - KaPR 35.547 & 35.553 GHz
- GMI (GPM Microwave Imager)
  - Ch # Center Freq (GHz) Pass-band Bandwidth

|   |       |      |
|---|-------|------|
| 1 | 10.65 | 100  |
| 2 | 10.65 | 100  |
| 3 | 18.7  | 200  |
| 4 | 18.7  | 200  |
| 5 | 23.80 | 200  |
| 6 | 36.5  | 1000 |
| 7 | 36.5  | 1000 |
| 8 | 89.0  | 4000 |
| 9 | 89.0  | 4000 |

(150 or 166 GHz and 183 GHz are TBD high frequency channel enhancement options)

- Constellation of passive microwave radiometers

## *Hydros - The Hydrosphere State Mission*

Hydros is expected to provide the first global view of the Earth's changing soil moisture and land surface freeze/thaw state. It will conduct hydroclimatology of the soil moisture at 40 km, hydrometeorology of the soil moisture at 10 km, and observe freeze/thaw conditions at 3km during a 2 year mission. Science applications from Hydros include an enhanced understanding of processes that link water, energy, and carbon cycle, and improved weather and climate prediction.

### **LAUNCH:**

- Date: 2007

### **ORBIT:**

- 6AM/6PM sun-synchronous orbit at km, for a 2 year mission

- Altitude: 670 km

### **DESIGN LIFE:**

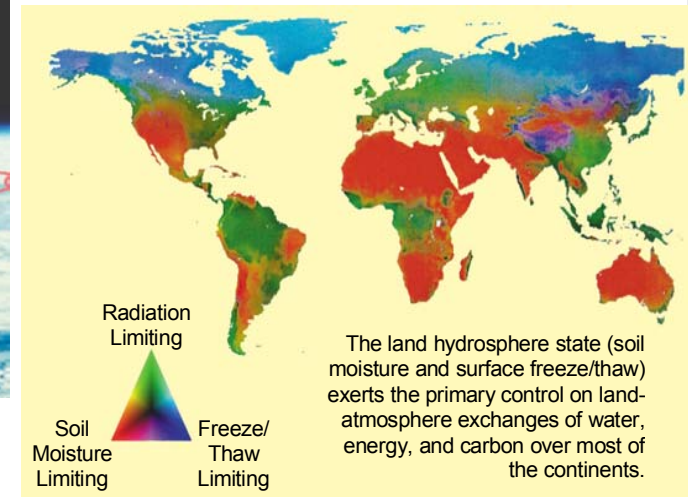

- 2 years

### **INSTRUMENTS:**

- L-band radar 1.24 GHZ and radiometer 1.41 GHz using one deployable antenna;
- Radiometer from GSFC
- Radar from ASI (Italian)
- Antenna from CSA

### **MEASUREMENTS:**

- Hydroclimatology of the soil moisture at 40 km
- Hydrometeorology of the soil moisture at 10 km
- Observe freeze/thaw conditions at 3km

# Integrated Observations

## Vantage Points

## Observation Capabilities

### Solar System

Communications infrastructure and space/Mars; In situ observation Exploratory vehicles

### LI/L2/GEO/HEO

Communications infrastructure  
In situ lunar vehicles; Sentinel satellites for continuous monitoring of Earth & Space

### LEO/MEO

Active & passive sensors for trends & process studies

### Suborbital

In situ measurement in research campaigns & validation of new remote sensors

### Surface-Based Networks

Ocean buoys, air samplers, strain detectors, ground validation sites

### Information Systems

Data management, data assimilation, modeling & synthesis
