

Framing the Conditions for Successful STEM Learning

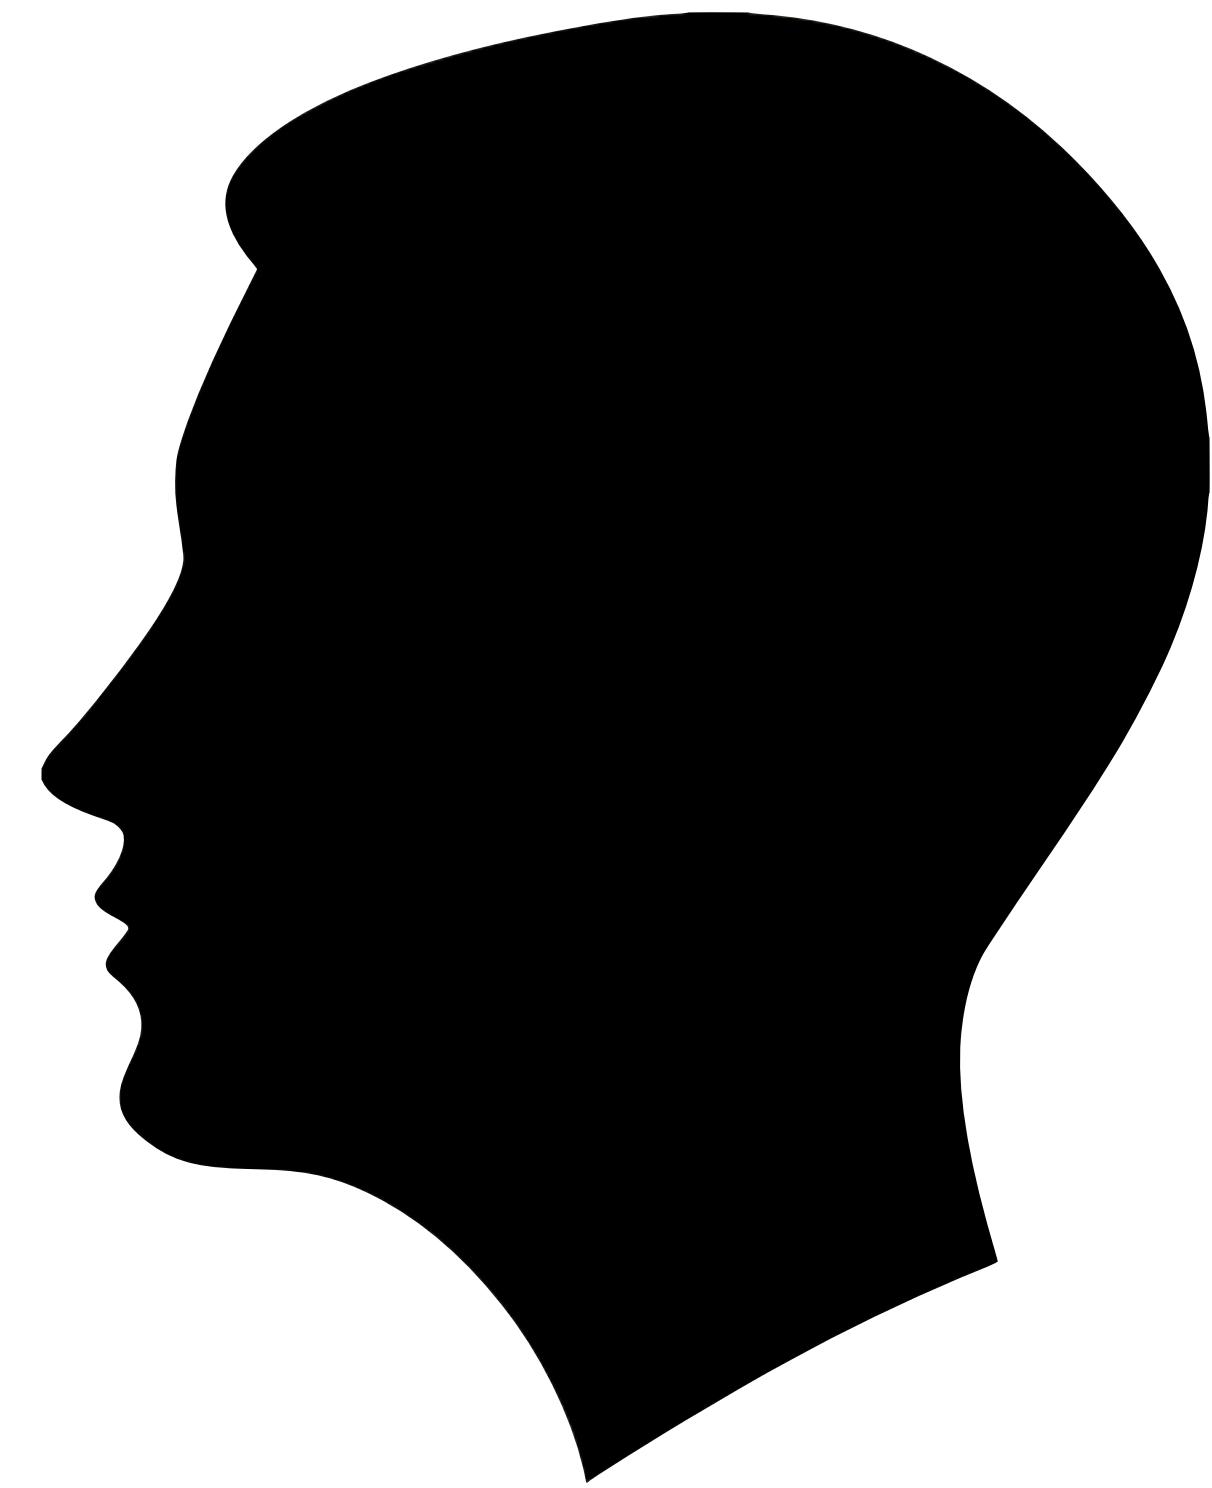

Nat Kendall-Taylor - *Vice President for Research*

Policy and Understanding

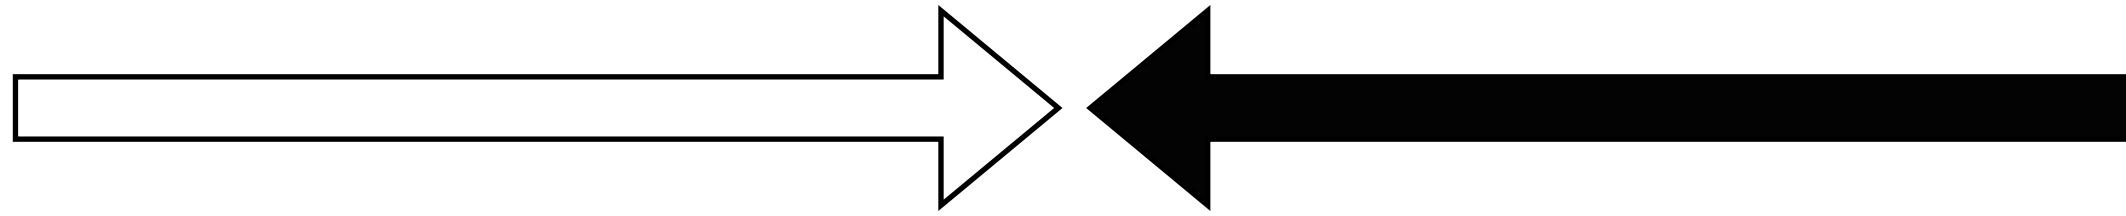

“...the initiation, contestation, adoption, implementation and evaluation of any policy is shaped in good part by the discursive, narrative, symbolic and other socially constructed practices that structure our understanding of that policy...”

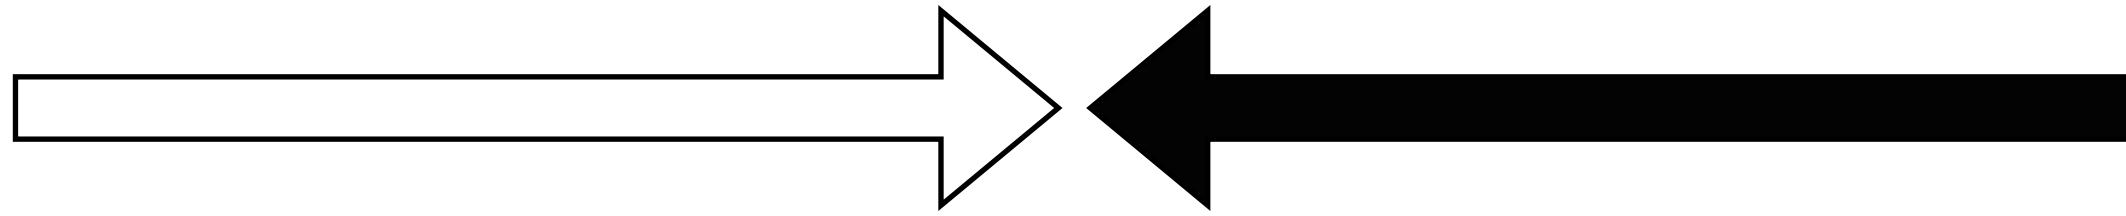

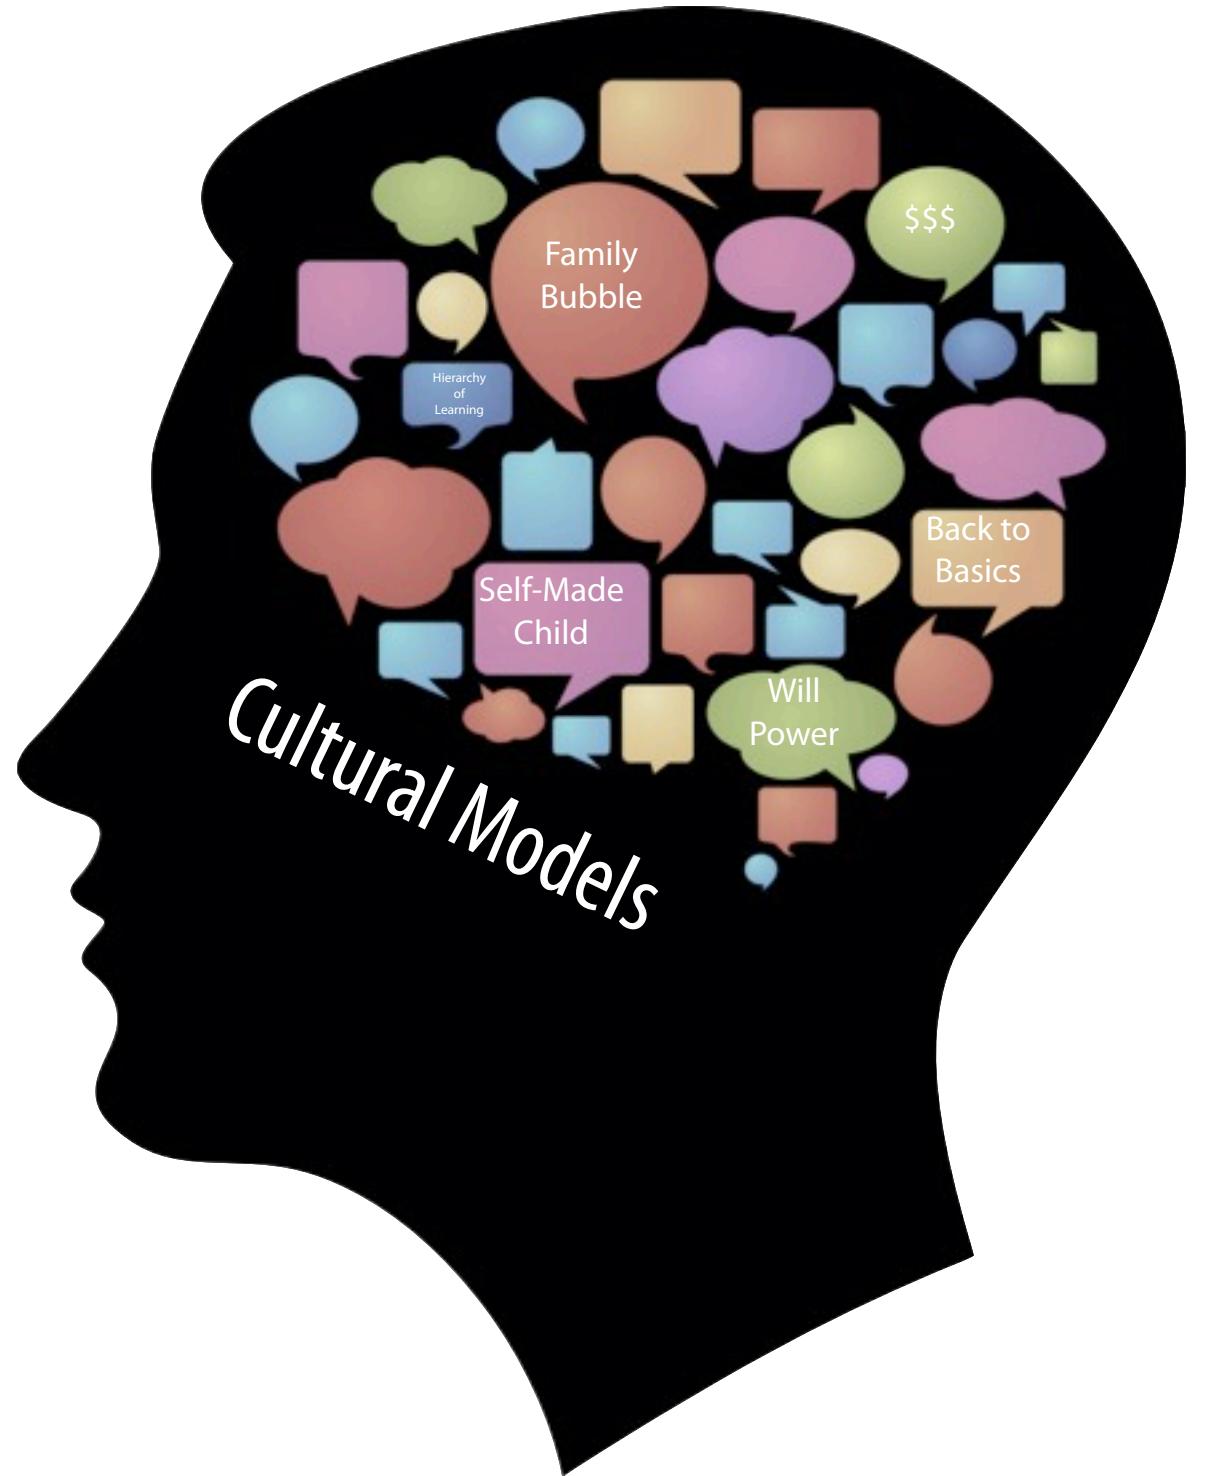

Sanford F. Schram, Words of Welfare, 1995

Out of school time is key for helping kids learn STEM subjects and skills. We need to focus more attention on these learning opportunities.

We can't even get the formal part right! We need to get a handle on the education that is happening in schools before we even think about all this out of school stuff.

Children need access to multiple high quality charging stations that give them the chance to charge up learning and engage their interests. Making sure that children have access to these charging stations wherever they are.

We need to make sure that these opportunities to charge up learning are out there--so that, regardless of where kids live, they can plug in and power up their learning.

Creating Space and Momentum for Better Policy

Creating Space and Momentum for Better Policy

“Objectively, you do the right amount of education; do the right amount of meeting and greeting and everything else. That ain't what it's about. It's about where the political will is, and how much passion there is around the issue by a wide enough audience, that these guys will say - this train is going and I don't want to be off the train.”

-Interview with state legislator
