Use of Electronic Health Record Data Collection by the National Health Care Surveys

Clarice Brown M.S.,
National Center for Health Statistics

National Academy of Sciences
Workshop on Use of Alternate and Multiple Data Sources for Federal Statistics
December 16, 2015
Overview

NCHS’s National Health Care Surveys -- Moving to electronic data collection

Potential Presented by Electronic Health Records

Development of Interoperability Data Standards

Leveraging Public Health Reporting for Meaningful Use Incentive Program
National Center for Health Statistics

Monitor the nation’s health by collecting, analyzing, and disseminating health data

NCHS’s National Health Care Surveys

Produce accurate objective, nationally-representative statistics on health care to inform health care policy and serve a variety of research needs
National Health Care Surveys

• National Ambulatory Medical Care Survey
  ▪ Physician Offices
  ▪ Community Health Centers

• National Hospital Ambulatory Medical Care Survey
  ▪ Emergency Departments
  ▪ Outpatient Departments
  ▪ Ambulatory Surgery Centers

• National Hospital Care Survey
  ▪ Inpatient Departments
  ▪ Emergency Departments
  ▪ Outpatient Departments including Ambulatory Surgery

• National Study of Long Term Care Providers
Examples of the Data

**Patients**
- Demographics
- Insurance status
- Residential Zip
- Medical Conditions
- Smoking history
- Personal Identifiers for linkage (e.g. to the National Death Index)

**ENCOUNTER**
- Reason for Visit
- Diagnosis
- Procedures and services
- Medications or immunizations
- Laboratory and other diagnostic tests
- Types of providers seen
What is an EHR?

Electronic health records (EHR)

- System that pulls information from multiple sources
- Developed by commercial software vendors
- Types of data that can be extracted:
  - Patient demographics
  - Vital signs
  - Medications
  - Diagnoses
  - Labs
  - Active problems
  - Visit dates and times
  - Procedures
  - Test results
  - Clinical notes
Why move to electronic health record data?

Potentially

• Less burden of the provider
• More secure
• More timely
• More clinical detail and depth
• Greater volume of data
Adoption of Electronic Health Record Systems by office-based physicians and acute care hospitals: United States

Why now?
What will it take to move to EHR data collection?

Data Standards
- HL7 Implementation Guide for the National Health Care Surveys

Incentives to change
- Medicare and Medicaid Electronic Health Record Incentive Programs
- 2015 Edition of Health IT Certification Criteria
Draft Standard for Trial Use

Provides a standardized format to submit data to fulfill the requirements of National Health Care Surveys

Automates the survey process via
- Streamlines the collection of data
- enabling increased sample pool allowing providers who want to participate in the surveys to do so

The HL7 CDA Implementation Guide (IG) is listed in the 2015 Interoperability Standards Advisory.
- IG is named as the best available content/structure and standard for national health care surveys.
Leveraging Meaningful Use Incentive Program

NHCS is included in the recently published final rule for Meaningful Use (MU) (October 2015)

• Hospitals and Eligible providers (physicians) can use submission of NHCS data as one of their options to fulfill the public health objective for Meaningful Use Incentive Program.
Declaration of Readiness for Public Health Reporting

The Centers for Disease Control and Prevention’s National Center for Health Statistics (NCHS) is currently asking for data for the National Health Care Surveys from Eligible Professionals (EP), Eligible Hospitals (EH), and Critical Access Hospitals (CAH) to fulfill the Meaningful Use Electronic Health Records (EHR) Incentive Programs Public Health Objective, Measure 3, submission of data for specialized registry reporting.

To meet this objective, EPs, EHs, and CAHs are requested to electronically submit data from Certified Electronic Health Record Technology (CEHRT) to NCHS.

To register, please call 301-458-4321 or E-mail NCHSMUL@cdc.gov.
Moving Forward...

Work with EHR vendors to test and improve the HL7 CDA IG

Develop and implement onboarding system for hospitals and providers using a web portal

Continue to register physicians and hospitals for public health reporting

National Hospital Care Survey:
• Continue to recruit sampled hospitals and obtain EHR data
• Prepare for integration of claims data with the EHR data from hospitals

National Ambulatory Medical Care Survey:
• Continue to register physicians for MU credit
• Obtain EHR data from sampled physicians
• Prepare for integration of abstracted data and EHR data
What will the National Health Care Surveys look like when we’re done?

Clinical Depth/Richness
- Collect clinical information objectively without need for medical record abstraction.
- Medications, laboratory tests, Imaging, Results

Volume
- Obtain all inpatients and ambulatory visits including self-pay, charity and prisoners.
- Rare conditions

Linkage to Other Data
- National Death Index (30, 60, 90 day mortality)
- Medicare and Medicaid Claims
