The interstitium, the Largest Organ We Never Knew We Had

New Human 'Organ' Was Hiding in Plain Sight
The interstitium, scientists found, is under our skin and between our organs. Understanding it may eventually help treat disease.

Study says we have an undiscovered organ. It's called the interstitium
Connecting journalists to credible, articulate scientists. On deadline. For free.

THIS FRIDAY!
SciLine by the Numbers

Total in-scope reporter requests to date: **476**

We filled: **464** (**97.5%** success)

More than **700** scientists recommended to reporters

80% of resulting stories quote a SciLine expert

More than **150** participants in media briefings

More than **10,000** scientists in our database

Hundreds of reporters & science communicators visited in universities and newsrooms across **27** cities in **13** states.
The 'Space Gene' That Wasn't

A viral story about twin astronauts shows what happens when science writing goes awry.
