## Agenda

### **Projects using 2010 Census data**

1. Calculate Floodplain Weights
2. Benchmark Existing Home Sales (EHS)

# Calculating Floodplain Weights

# Calculating Floodplain Weights

## Step 1

Overlay the NFHL delineating 100- and 500-year floodplains with the 2010 Census block centroids and aggregate the total number of housing units in the Census Blocks that intersected the floodplain

## Step 2

Aggregate the floodplain housing units to the Census track level

## Step 3

Calculate the share of a Census track's housing units in the 100-year and 500-year floodplains

## Step 4

Weigh 2018 ACS estimates at the Census track level by floodplain weights

NATIONAL  
ASSOCIATION of  
REALTORS®

# Example: Characteristics of the housing in the floodplain

**Maricopa County, AZ ----- 92.0% of homes intersect the floodplain**

## ***Housing in the floodplain***

- 1.61 million housing units*
- 911,000 owner-occupied units*
- 626,000 units with a mortgage*
- 1.05 million single-family homes (64% of homes in the floodplain)*

# Example: How many home sales will be affected by a NFIP lapse

## Calculating Floodplain Weights

### Nationwide

About 40,000 closings per month or 1,300 per day

### Most impacted states

Florida (13,500 closings)

Texas (3,150 closings)

California (1,850 closings)

# Recent EHS Benchmarks

Benchmarking Existing Home Sales (EHS)

# Results of the last re-benchmark

	Reported Annual EHS	Re-Benchmarked EHS	Revision
2007	5,652,000	5,018,000	-11%
2008	4,913,000	4,123,000	-16%
2009	5,156,000	4,335,000	-16%
2010	4,908,000	4,182,000	-15%
Total	20,629,000	17,658,000	-14%

Benchmarking Existing Home Sales (EHS)
