

# Blazing a Green Building Trail: Strategies for Assessing and Greening Agency Building Inventories

---

Presentation for the Federal Facilities Council

---

Josh Silverman  
Department of Energy  
Office of Environmental Policy and Assistance  
May 19, 2009

# Overview

- DOE Policy Framework:
  - Establishing requirements and expectations
  - Embracing Sustainability within the Organization
- Getting to 15% by 2015
  - Assessing a Building Portfolio
  - Identifying Greening Options
  - Tracking and Reporting
- Building Assessment Tools
- Observations and Lessons Learned

# DOE Policy Framework

- Department formally required integrating “sustainability” into new construction and major renovations in 2006 (after signing Federal Green Building MOU)
  - Some DOE sites/programs on the leading edge of green buildings from the start
- Embedded EO 13423 sustainable building goals into DOE Goals & Orders in 2007-08

# DOE Policy Framework

- New Construction:
  - All new building construction projects required to comply with the Guiding Principles
  - Building projects over \$5M (new construction and major renovation) required to achieve LEED Gold certification
  - Top-Level commitment at Headquarters
  - Leadership by the DOE Laboratories

# DOE Policy Framework

- Leasing:
  - DOE established a preference for LEED Gold when seeking new leased space
    - If LEED Gold is not available, preference for LEED Silver, and then Certified
    - If none, then space conforming to the Guiding Principles for High Performance and Sustainable Buildings is preferred
    - DOE communicated this preference to GSA
  - DOE is incorporating LEED and Guiding Principle preferences into lease renegotiations

# DOE Policy Framework

- Existing Buildings:
  - Established Agency requirement to address the “15% by 2015” goal
  - Requirement flowed down to Programs and Sites
  - Internal DOE working group developing strategies to meet all the HPSB goals, including “15% by 2015”
    - Working group developed a multi-step approach to get to 15%
    - New assessment and tracking tools developed

# Embracing Sustainability

- Goals and policies are necessary, but not sufficient, to achieve success
- Teamwork, Tools, and Top-level support are critical as well
  - Teamwork: sustainability is inherently cross-cutting—no one organization owns it
  - Tools: integrating sustainability into existing processes is not always straightforward
  - Top-level support: important to manage the institutional resistance to change, secure funds needed to implement sustainability

# 15% by 2015: Swallowing an Elephant?

Three reasons why the 15% by 2015 goal is the most challenging requirement of EO 13423:

1. Relatively few new buildings in the pipeline; compliance will require addressing existing inventory
2. Minimal experience in “greening” existing buildings; lack of metrics, practical knowledge
3. Integrating sustainability is a group effort; multiple parties must be involved to achieve success

Success requires a multi-year, multi-party effort

- Like swallowing an elephant: one bite at a time

# First Steps: Determine Baseline, Eliminate Noise

- Determine your baseline inventory
  - Identify exclusions—reduce noise
  - Will you focus on buildings or square footage?
- Determine your target population
  - 15% goal leaves latitude to skip the difficult cases
  - Prioritize a small subset of buildings—reduce more noise
- Identify existing buildings that meet the Sustainability Requirements
  - Does it have the USGBC plaque on the wall?
  - Can you demonstrate it complies with the Guiding Principles?

# Determining the DOE Candidate Inventory

Number of Owned Buildings	9,872
Total Owned Square Footage	121,617,541
% above CAT	52.76% buildings / 89.70% sq. ft.
Other Building Threshold (OBT)	<p>Includes all enduring buildings:</p> <ul style="list-style-type: none"><li>- Greater than 1,000 square feet</li><li>- Not shut down or outgranted</li><li>- Will not be excessed by 2015</li></ul>
% of buildings above OBT	4,635 buildings (47% of total)
% square footage above OBT	72,462,514 (60% of total)

*Buildings above the OBT comprise the Candidate Inventory*

# Generic Campus Greening Strategy

1. Form team and determine list of appropriate buildings  
*Get the right people; focus on the right targets*
2. Conduct “tabletop” assessments of selected buildings
3. Select best buildings to achieve 15% goal  
*Fewer is better—keep it as simple as possible*
4. Refine project costs/schedules estimates to achieve 15% goal  
*Integrate into site planning and budgeting*
5. Implement projects and track annual progress

# HPSB Assessment

- Assessment: a combination of a visual inspection and measurements to determine performance. The Assessment uses a set of standards to identify:
  - Site characteristics
  - Water use
  - Energy use
  - Materials and Resources, and
  - Indoor Environmental Quality
- Informal assessment is used to “triage” projects in the early stages
- Formal assessment required to document HPSB compliance
  - Critical to assign responsibility and accountability
  - Quality control and quality assurance is important

# DOE ASSESSMENT TOOLS

Integrating the Guiding Principles with the LEED  
NC and EB Worksheets

The DOE HPSB Assessment Tool is available at:

[http://www1.eere.energy.gov/femp/controlledaccess/sustainable\\_eo13423.html](http://www1.eere.energy.gov/femp/controlledaccess/sustainable_eo13423.html)

# New Construction

- The High Performance and Sustainable Buildings Guiding Principles (HPSB GP) have been matched with the LEED® New Construction (NC) credits.
- The LEED® credits that relate to the HPSB Guiding Principles are highlighted. Achieving all of the HPSB GP related credits will result in a potential LEED® Certified rating.
- Additional credits must be achieved to achieve LEED® GOLD.

LEED-NC has established credit scoring system and technical criteria

Guiding Principles:  
27 LEED® Credits  
5 Prerequisites

DOE requires LEED® Gold as minimum

# Existing Building Portfolio—15% by 2015

- Created assessment tool to facilitate & document compliance procedure
- DOE has modified the LEED® Existing Building Operations and Maintenance project checklist to serve as an assessment tool to match LEED credits to the corresponding Guiding Principles.
- The LEED® project checklist is a “planning and assessment tool” to identify measures for buildings.
- Created Summary Checklist to track Compliance.

Guiding Principle II. Optimize Energy Performance: **Energy Efficiency**

**High Performance Sustainable Buildings**  
**Explanation of Principle and Required Documentation for Existing Buildings**

HPSB Principle	How to Comply	Documents On File?	Related LEED Credit for U.S. Department of Energy
<p><b>Intent:</b> Demonstrate energy optimization performance. Establish a whole building performance target that takes into account the intended use, occupancy, operations, plug loads, other energy demands, and design to earn the ENERGY STAR targets for new construction and major renovation where applicable. For new construction, reduce the energy cost budget by 30 percent compared to the baseline building performance rating per the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., (ASHRAE) and the Illuminating Engineering Society of North America (IESNA) Standard 90.1-2004, Energy Standard for Buildings Except Low-Rise Residential. For major renovations, reduce the energy cost budget by 20 percent below pre-renovations 2003 baseline.</p>	<p>Document compliance with energy performance targets achieved through meter data, bills, energy usage modeling software, or data from Energy Service Performance Providers. Documentation and performance requirements are explained below. Or register with ENERGY STAR's Portfolio Manager and achieve a rating score of 75 or greater and print out the Statement of Energy Performance.</p>	<b>X</b>	EBc1.1-15; Energy Optimization:
<i>Documentation Options for Intent:</i>			
<p><b>Option A. Energy Usage Reduction</b>            Reduce measured building energy use by 30% compared to measured building energy use in 2003, design (not including designated mission, non-building intensive use).</p> <p><b>Option B. Energy Usage Reduction</b>            Reduce energy use by 20% compared to the current ASHRAE 90.1 baseline building design (not including designated mission, non-building energy intensive usage).</p> <p><b>Option C. Energy Star Rating</b>            For buildings ratable by ENERGY STAR's Portfolio Manager tool, achieve an energy performance rating of at least <b>75</b>. If unable to document through Portfolio Manager benchmark use LABS21 database to demonstrate a 25% improvement above average.</p>

✓ IAQ During Construction    ✓ Recycled Content    ✓ Biobased Content

#### Construction Specification:

#### Materials and Resources:

**Recycled Content.** Percentage of building materials (by cost) that contain post consumer and/or post-industrial recycled content.

**Locally Manufactured.** Percentage of building materials (by cost) manufactured regionally within a 300-mile radius.

**Locally Harvested.** Percentage of building materials (by cost) harvested and extracted within a 500 mile radius.

**Rapidly Renewable.** Percentage of building materials (by cost) that are rapidly renewable

**Resource Reuse.** Percentage of building materials (by cost) that are salvaged, refurbished or reused

Rapidly renewable materials can be planted and harvested in less than a 10 year cycle. Examples include bamboo flooring, cotton batt insulation, poplar OSB (oriented strand board) and linoleum (i.e., marmoleum) flooring. Include table as an appendix; list all products purchased for the building and those that are rapidly renewable to determine the % of rapidly renewable building materials. The LEED<sup>TM</sup> reference template may be used.

# HPSB Assessment Summary Table

Compliance Forms also tabulate a Guiding Principle Assessment Summary Table.

Provides area for comments/notes on meeting Guiding Principles.

High Performance Sustainable Buildings Existing Buildings Assessment Verification - Summary Table			
HPSB Principle	Action Required	% HPSB GPs Achieve	notes/comments
<b>1. Employ Integrated Design Principles</b>		<b>0.0%</b>	
Integrated design	LEED Accredited Professional Inter-sustainable team	<input type="checkbox"/>	
Commissioning	Commissioning: Investigation & Analysis.	<input type="checkbox"/>	
	Commissioning: Implementation	<input type="checkbox"/>	
<b>2. Optimize Energy Performance</b>			
Energy Efficiency	Energy Optimization	<input type="checkbox"/>	
Measurement and Verification	Energy Star's Portfolio Manager or Labs 21, or equivalent	<input type="checkbox"/>	
	Building level utility meters	<input type="checkbox"/>	
	Data entered into High Performance database	<input type="checkbox"/>	
<b>3. Protect and Conserve Water</b>			
Indoor Water	Indoor Plumbing Fixture Efficiency, 20 %	<input type="checkbox"/>	
Outdoor Water	Water Efficient Landscaping, Reduce by 50%	<input type="checkbox"/>	
	Storm-water management	<input type="checkbox"/>	
<b>4. Enhance Indoor Environmental Quality</b>			
Ventilation and Thermal Comfort	Ashrae Standard 55 & 62.1	<input type="checkbox"/>	
Moisture Control	Moisture Control Strategy	<input type="checkbox"/>	
Daylighting	Lighting Control for 50% of building occupants	<input type="checkbox"/>	
	2% daylight factor in 75% of all spaces	<input type="checkbox"/>	
Low-Emitting Materials	Materials and products with low VOCs	<input type="checkbox"/>

# Assessments Conducted and Planned (FY 08 data)

- 2,661 buildings were assessed for sustainability
  - 43% of *Candidate Inventory* (CI) square footage
- 2,256 buildings were assigned dates by which sustainability assessments are to be conducted.
  - Comprise 61% of square footage
- 20 buildings (1.7M ft<sup>2</sup>) reported as sustainable
  - 2.2% of square footage
- Applied “business rules” to complete assessments

# Tracking and Reporting Progress

- DOE uses FIMS (Facility Information Management System) as the sole source for its real property data
- FIMS now includes sustainability metrics
  - Results from existing building assessments entered into FIMS
  - Agency calculates progress towards 15% using FIMS data
  - Assessment data (calculations, spreadsheets and similar information) is maintained by the site, along with all supporting documentation

# The Next Step: Validating Assessment Data

DOE already has a robust FIMS validation process

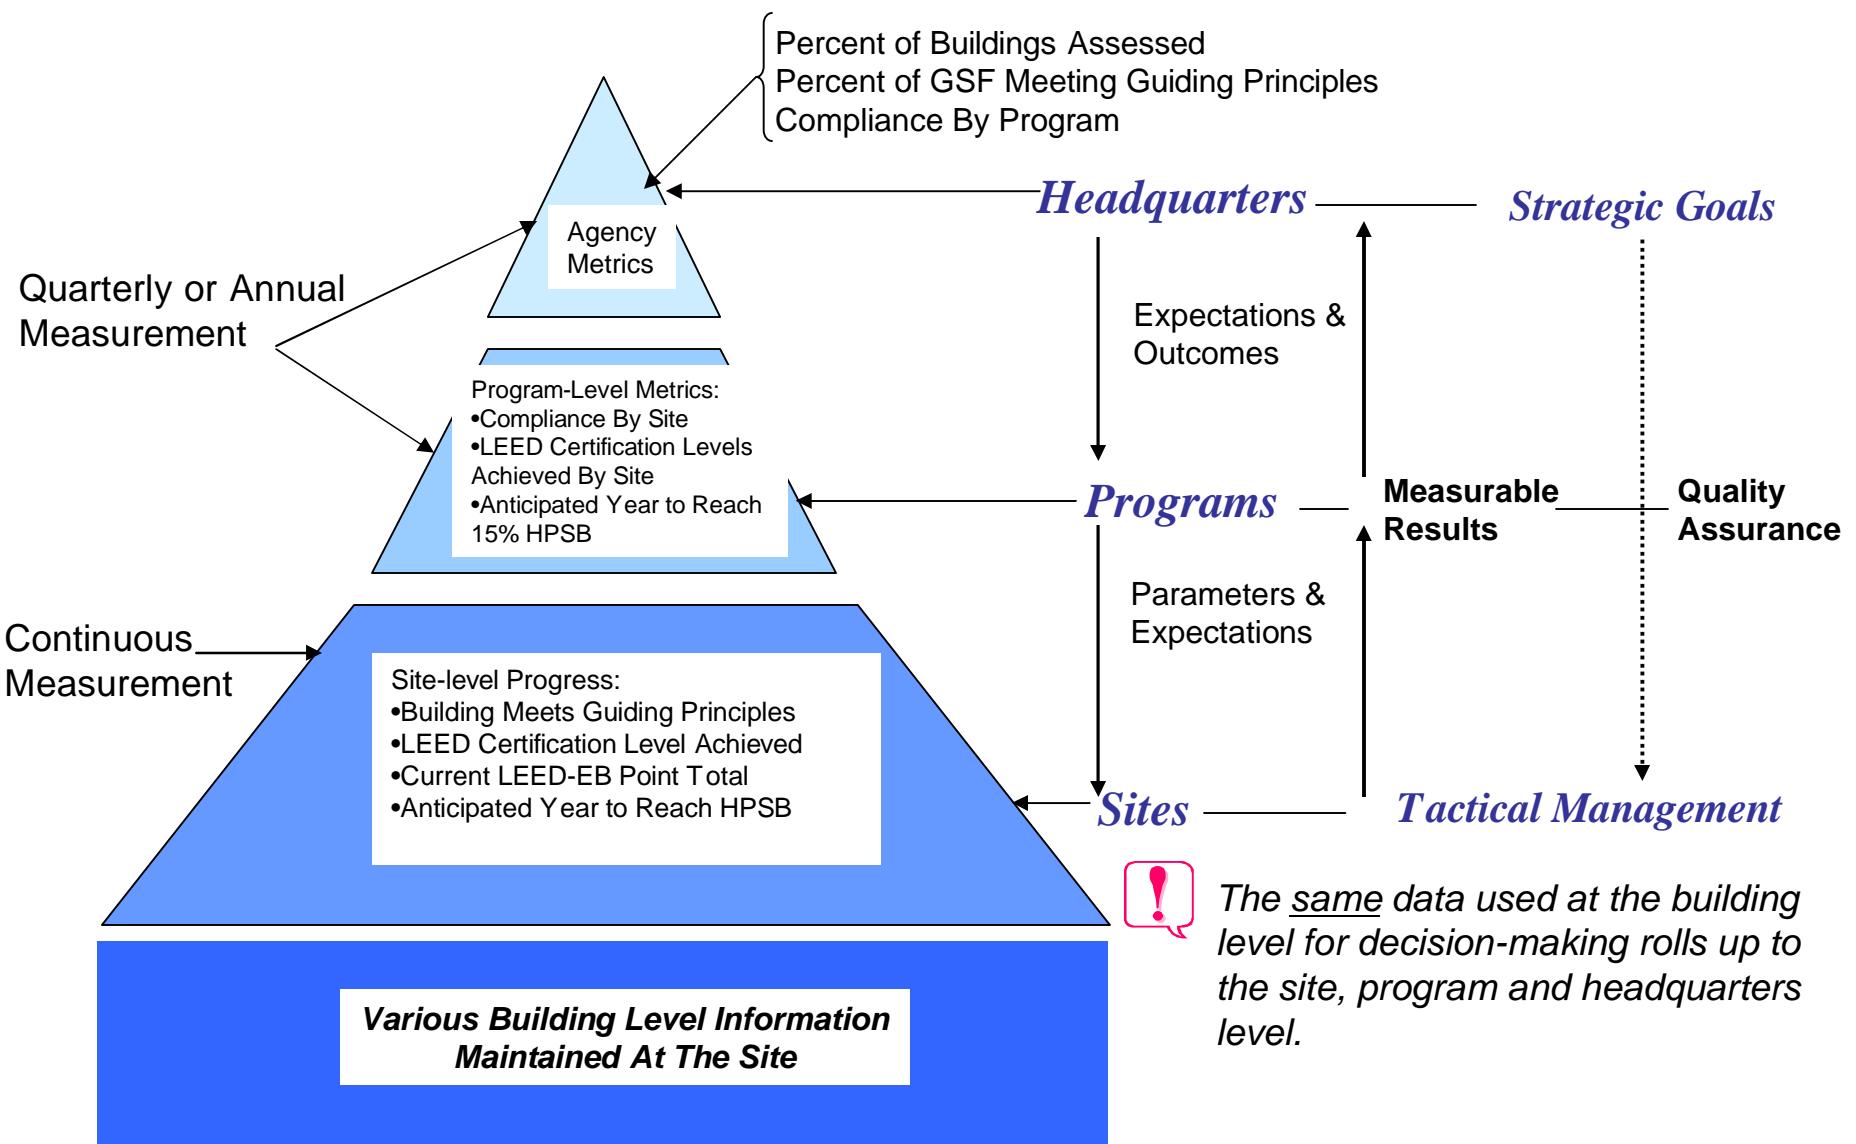

- Sites validate their data each year
- HQ review teams visits sites on a rotating basis
  - Sites typically gets a HQ review every 4 years
  - More frequent visits when problems are identified

DOE Incorporating Sustainability Data Review into the FIMS Validation Process

- Sites must validate sustainability data annually
- HQ teams will include review of sustainability data
  - Focus on buildings claiming to meet the Guiding Principles
- Reviews will follow the criteria embedded in the DOE Assessment Tool

# Performance Measures

## (Aligns to DOE Management Processes)

# On the Horizon: Greenhouse Gas (GHG) Management

Greenhouse Gas tracking and mitigation is coming

- EPA to us Clean Air Act to regulate GHGs
- Legislation and Executive Order are likely to establish aggressive GHG reduction goals
- Agencies will need GHG management plans that align with new requirements

Emphasize Sustainable Design, Construction, and O&M as GHG Management Tool

- Buildings are DOE's largest emissions source
- Significant opportunities for reductions

# Key Observations

- Sustainability cuts across sites/agencies
  - Need to look beyond design and construction to integrating sustainability cradle to grave
  - Sustainability will be key to GHG management
- Integration is key to success
  - Need to integrate energy and environment into design, construction, operations, and maintenance
  - Involve key stakeholders at site and HQ level
- Look at organizations, not just buildings
  - Plans and policies, Campus-wide approaches
  - Leverage site Environmental Management Systems

# Questions? Comments?
