

# New Challenges in IT

Peter Lee, Department Head

Computer Science Department

Carnegie Mellon University

April 24, 2008

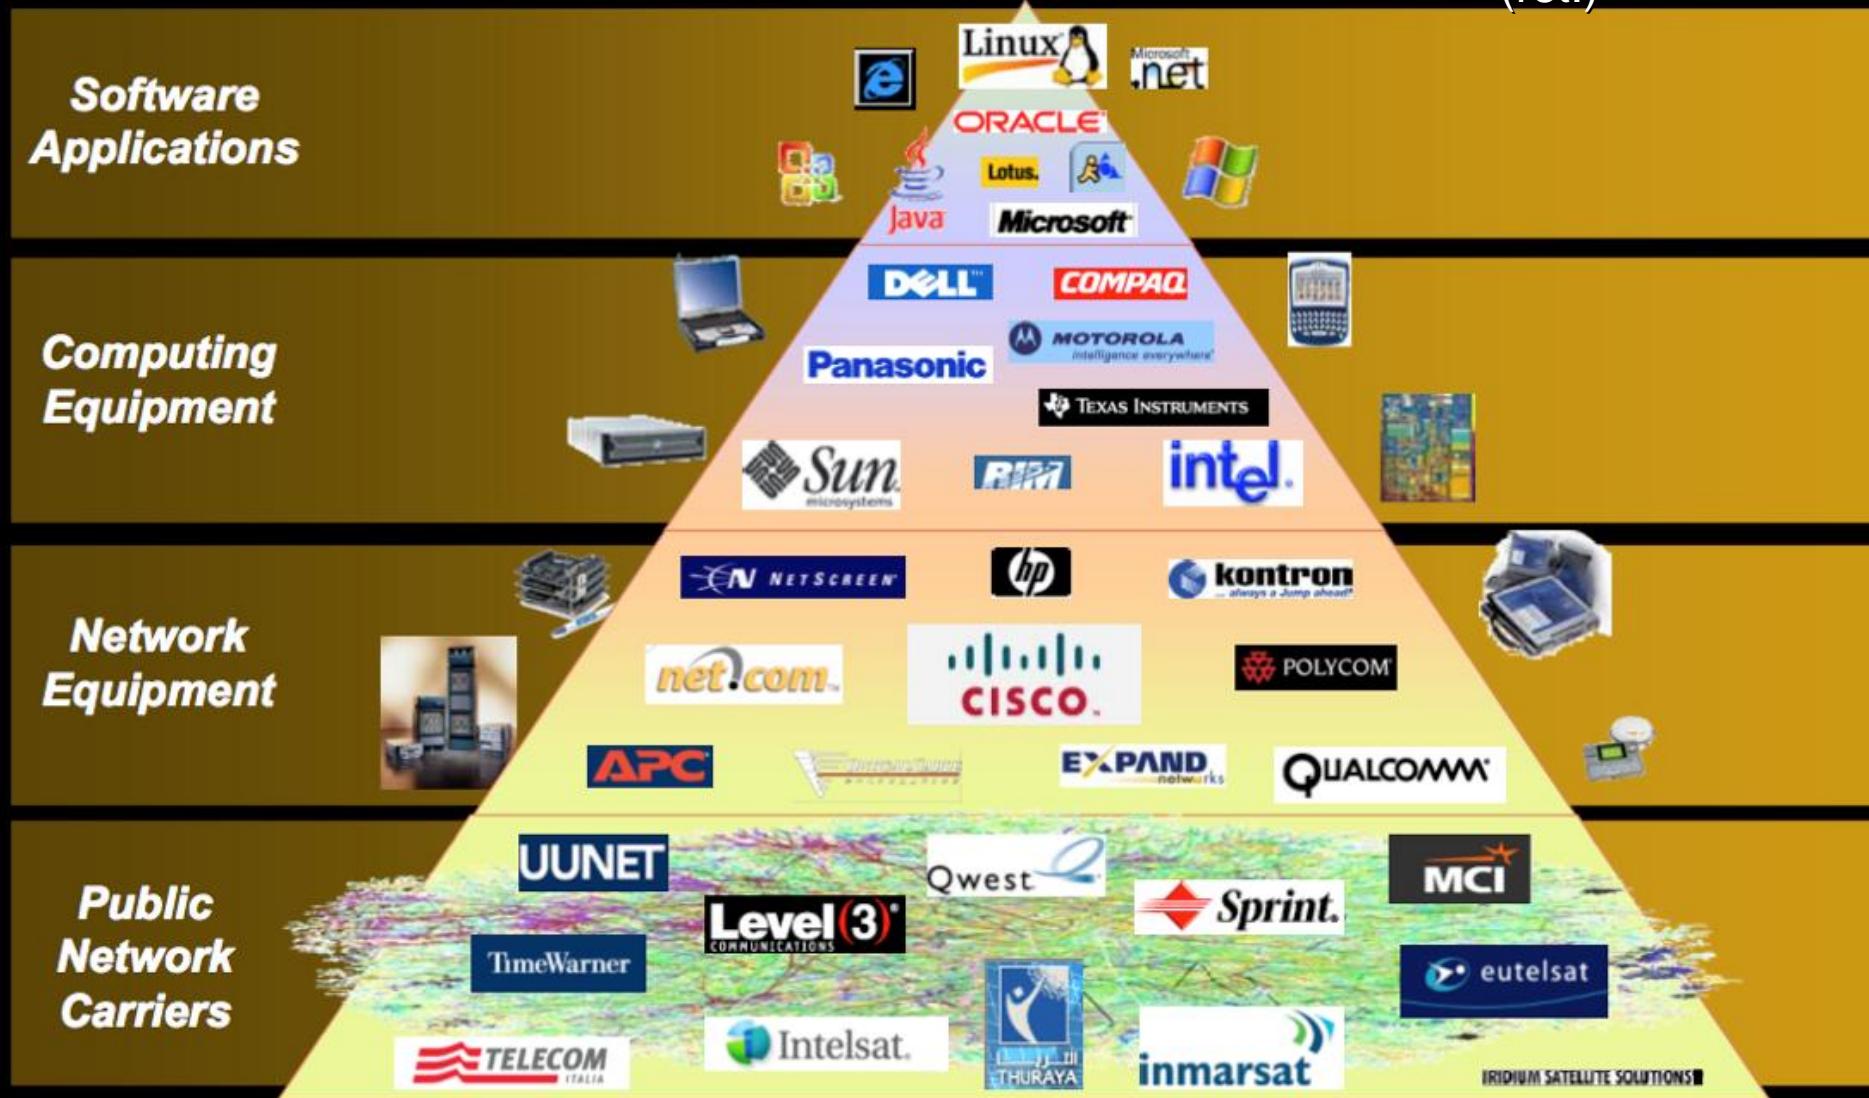

# IT research landscape

- Drivers of change in critical national IT needs:
  - globalization
  - data-intensive science, engineering, and commerce
  - multicore computing and the end of Moore's law
  - Internet as a social and computing mechanism

# DOD Networks

## Commercial Technology Inside

Courtesy, Gen. Steven Boutelle  
(ret.)

80% of DoD IT is COTS (including the classified bits!)

# The certification challenge

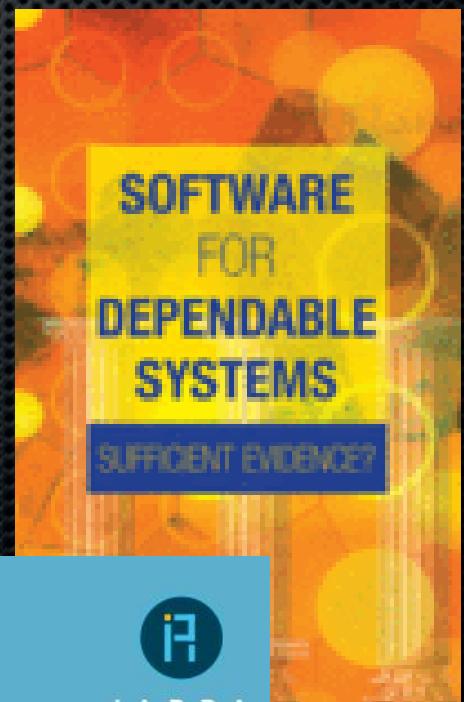

- Today, **certification** (esp. in defense and intelligence agencies) **does not focus on the actual code**
  - based on standards and conformance tests
  - a significant national security risk
- Is there a new certification technology?

Chip manufacturers are betting that multicore processor technology will keep US industry on the Moore's Law curve

# The multicore challenge

- **Performance is not scaling with transistor count**
- We don't know how to write software for multicore!
  - one of the holy grails of computer science, particularly urgent today
  - Not just algorithms, but also languages, architecture

# A Story: Machine Translation Research

Beijing January 17 / Shinhua / the Chinese and Russian officials urged all  
parties concerned to " remain calm and exercise restraint " over the  
nuclear issue of the Democratic People's Republic of Korea.

He met with vice Chinese foreign minister Yang Chang won the deputy of  
the Russian foreign minister Alexander Losyukov at a lunch with invited  
interested parties to continue the search for a peaceful solution through  
dialogue under the current complicated situation.

# 2005 NIST MT Challenge

- Google “comes out of nowhere”, employing massive data-intensive computing to win
- Confirms the scalability of a range of algorithms

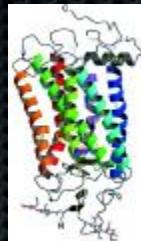

# The underlying algorithms have impact beyond machine translation!

Group	Perfect match	Good match	OK match
Missing rungs	0	1-2	3 or more
PDB-ID	<b>1czf</b>	1air, 1bhe, 1bn8, 1dbg, <b>1ee6</b> (right), 1idj, 1ktw(left), 1qcx, 1qjv, 1rmg	<b>1dab</b> (left), 1ea0, <b>1tyu</b> (right)

# A New Era in Scientific Discovery?

Data-Intensive  
eScience

Theory &  
Experimentation

Modeling &  
Simulation

# The DISC challenge

- DISC: Data-Intensive Scalable Computing
- Is there a scalable, reliable, sharable computing architecture for dealing with data-intensive problems?
- Can “cloud computing” provide a basis for eScience?
  - can we make this as accessible and interactive as, say, Google.com?

## Security Check

Type both words separated by a space below

excellent Yes

Type both words:

[Get a new word](#)

[Vision Impaired](#)

[Help](#)

**The Security Check allows us to:**

**Ensure Fair Access to Tickets**

Automated programs known as "Bots" cannot read distorted text as well as humans. The Security Check helps prevent automated programs from blocking other customers from getting tickets.

**Digitize Books One Word at a Time**

By entering the words in the box, you are also helping to digitize books from the Internet Archive and preserve literature that was written before the computer age.

**Provide an Audio Option for Visually Impaired Customers**

An audio option allows visually impaired customers to hear a set of 8 digits that can be entered instead of the word challenge.

You do not have permission to access this website if you are using an automated program.

About 200M CAPTCHAs are solved every day.

This amounts to about 500,000 hours of daily human effort.

Enter **both** words below, separated by a **space**. What's This?  
Can't read this? Try another.

# The society-scale computing challenge

- For the first time in history, we have the ability to marshall the abilities of hundreds of millions of people
- How can this be used to solve problems of critical national importance?

# Summary

- Significant changes are driving IT research into new directions that are relevant to NIST areas
- Some examples
  - certification
  - multicore computing
  - DISC
  - society-scale computing
