Opportunities and Challenges in Synthetic Biology
Tools and Techniques – Enabling Innovation

Synthetic bioystems

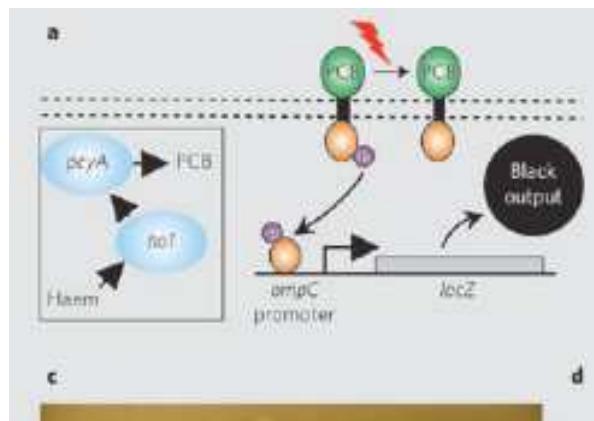

Fabrication tools

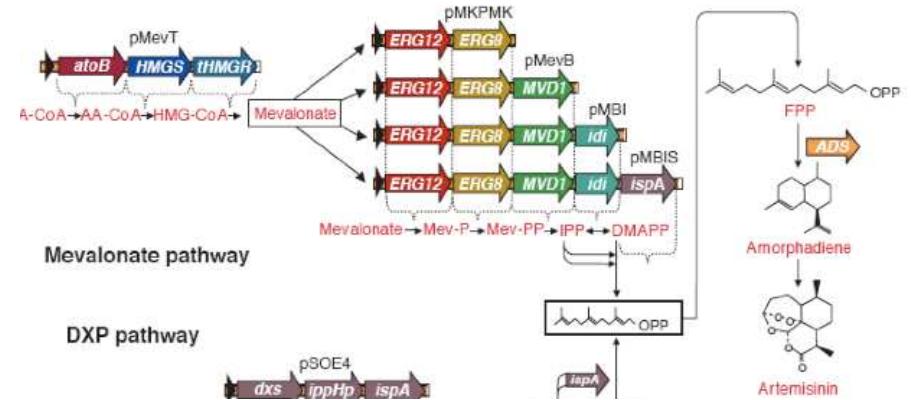

Itaya M, et al. 2005. PNAS. 102: 15971-6
Gibson DG. 2008. Science. 319: 1215-20

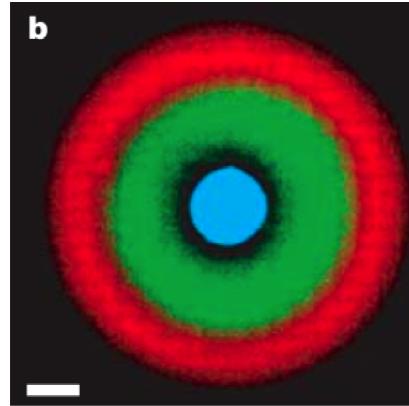

Model circuits

Biosynthesis applications

Why the gap between tools and applications?

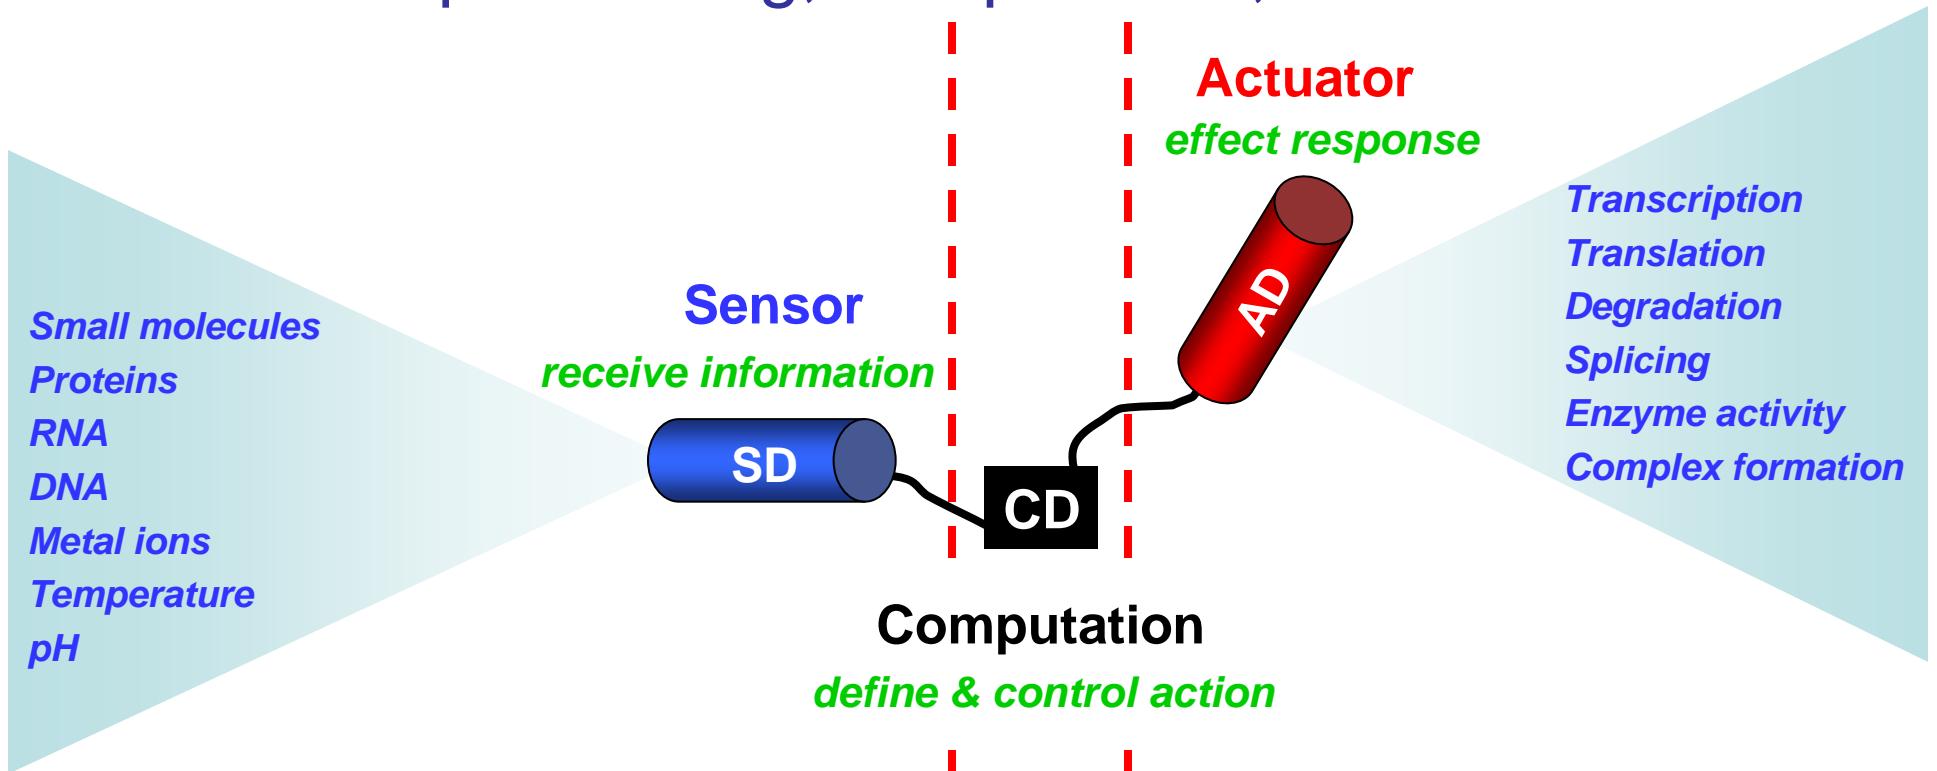

Levskaya A, et al. 2005. *Nature*. 438: 441-2
Basu S, et al. 2005. *Nature*. 434: 1130-4

Martin VJ, et al. 2003. *Nat Biotech*. 21: 796-802

1. Refinement and optimization of tools for applications represents a significant challenge

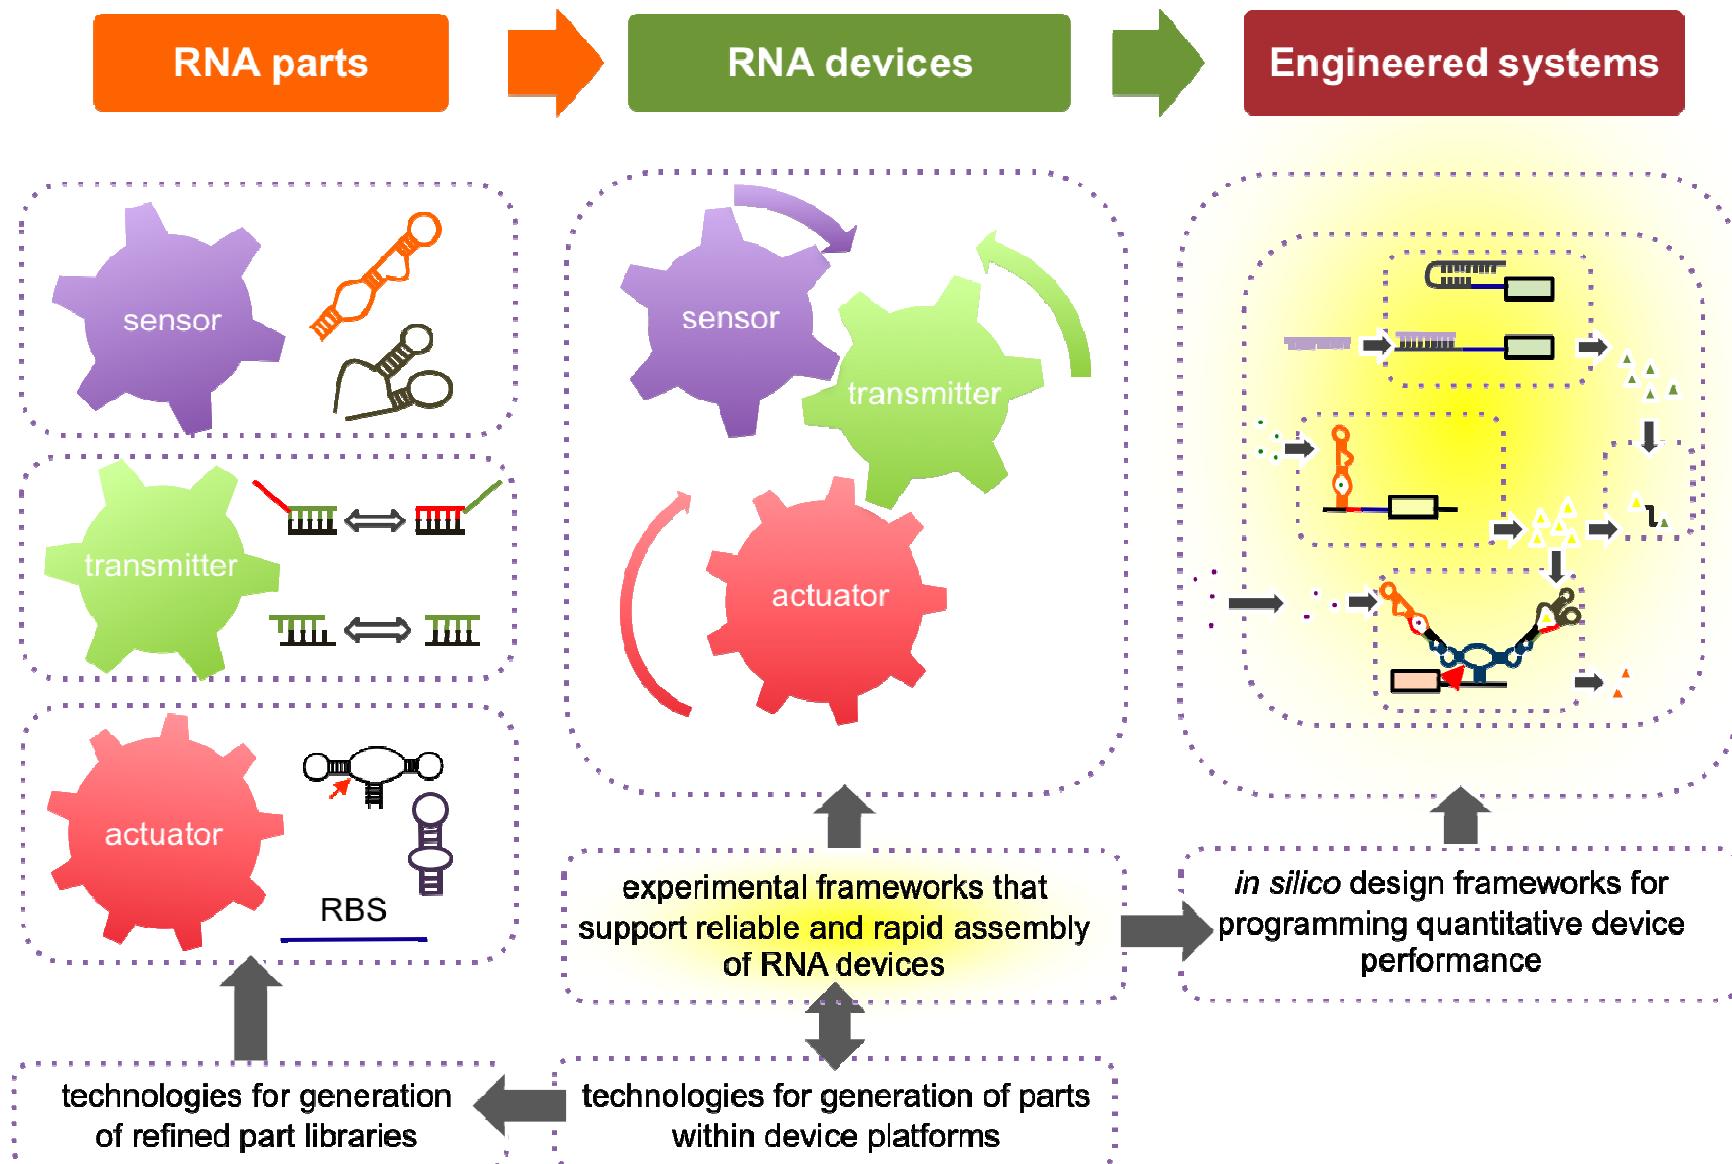

Information processing, computation, and control

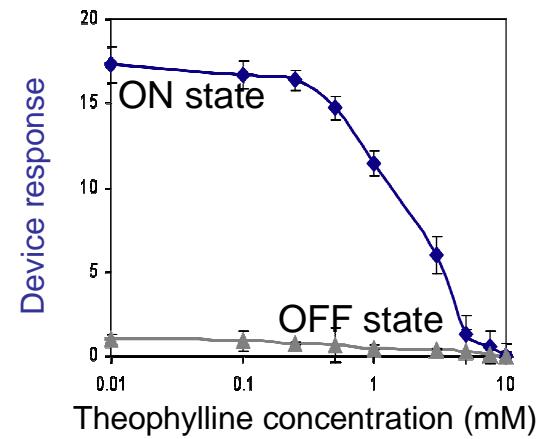

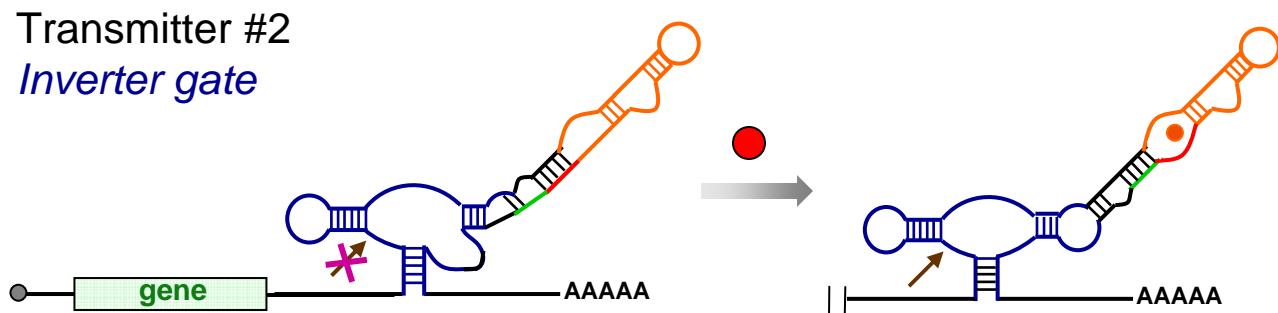

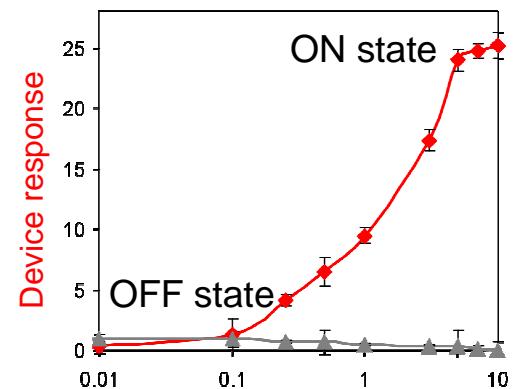

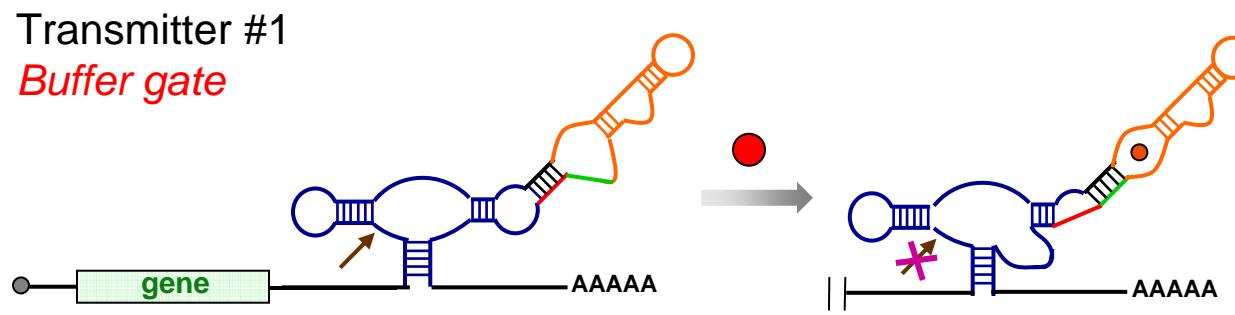

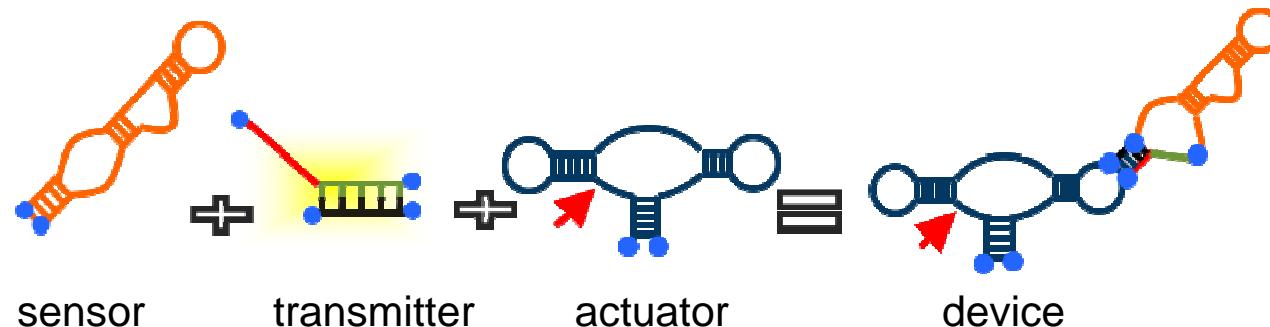

Key Engineering Properties

- ✓ scalability
- ✓ portability
- ✓ utility
- ✓ composability
- ✓ reliability

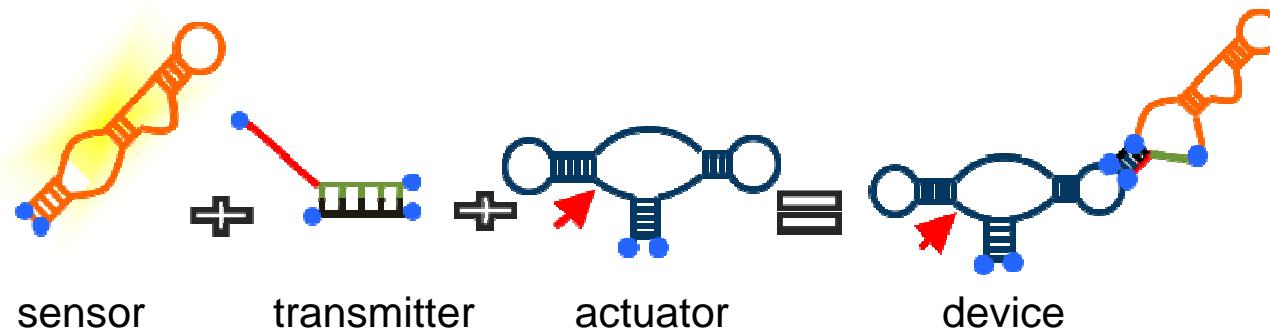

Plan for developing a programmable I/O tool

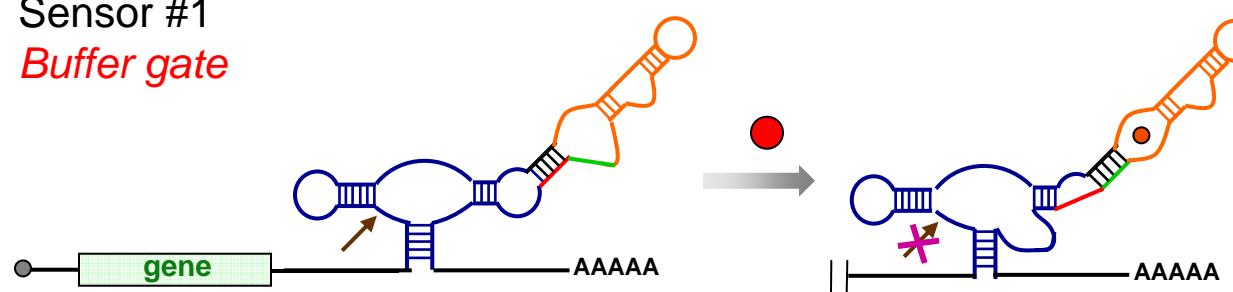

A platform for programming device function

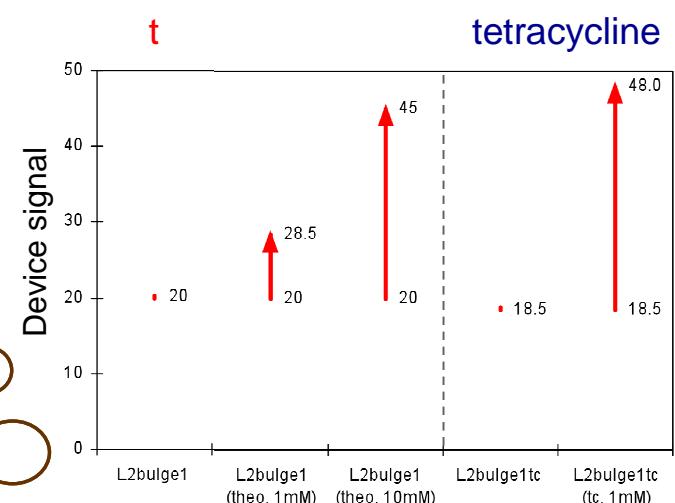

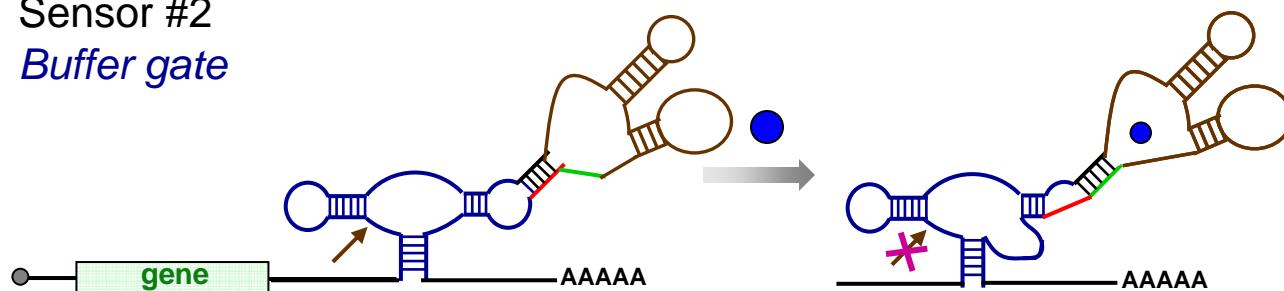

A platform for programming device inputs

Sensor #1
Buffer gate

Sensor #2
Buffer gate

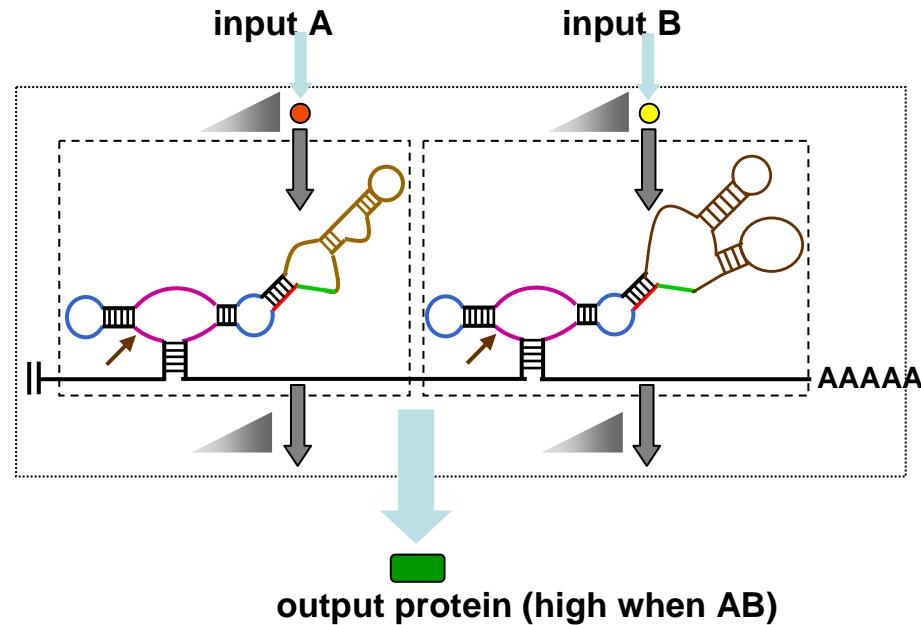

Higher-order computation - logic gate devices

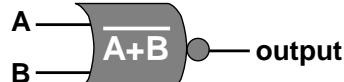

AND gate

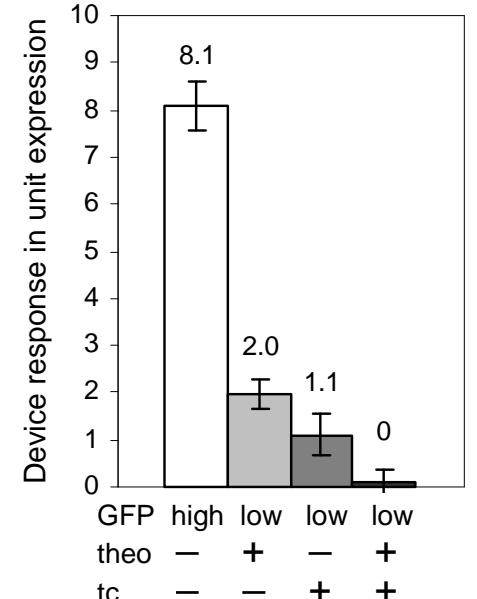

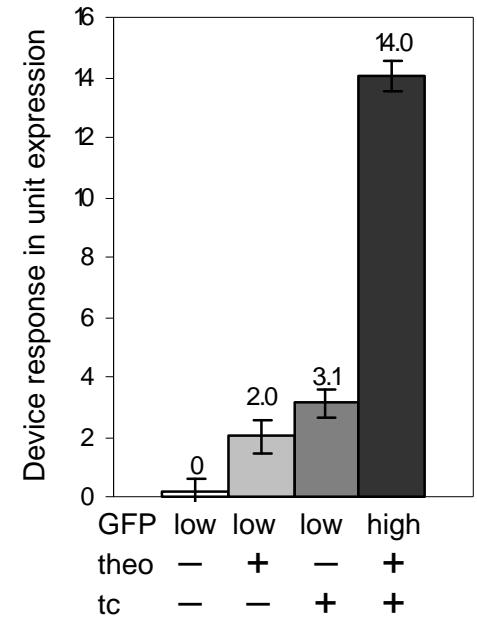

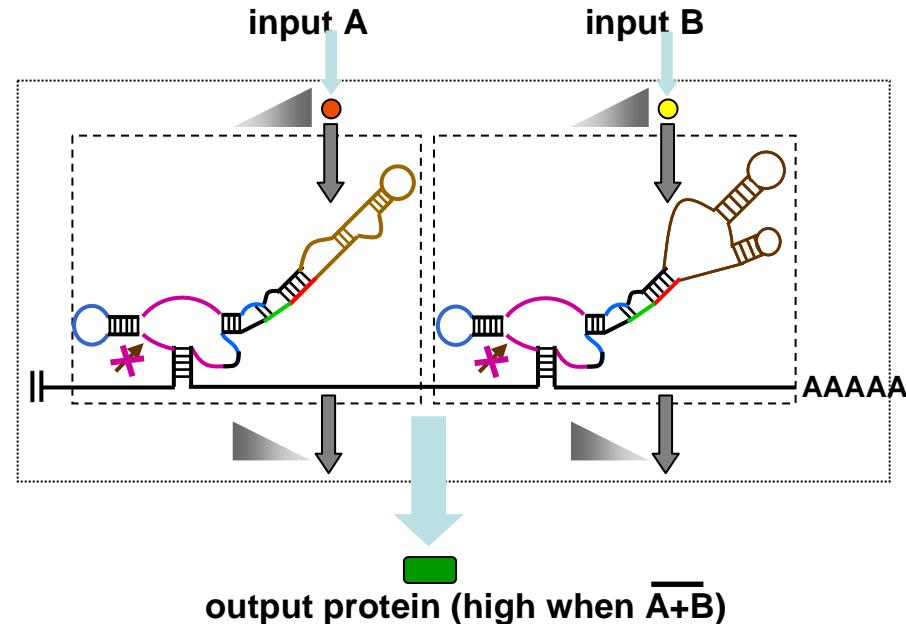

A	B	output
theo	tc	GFP
0	0	0
0	1	0
1	0	0
1	1	1

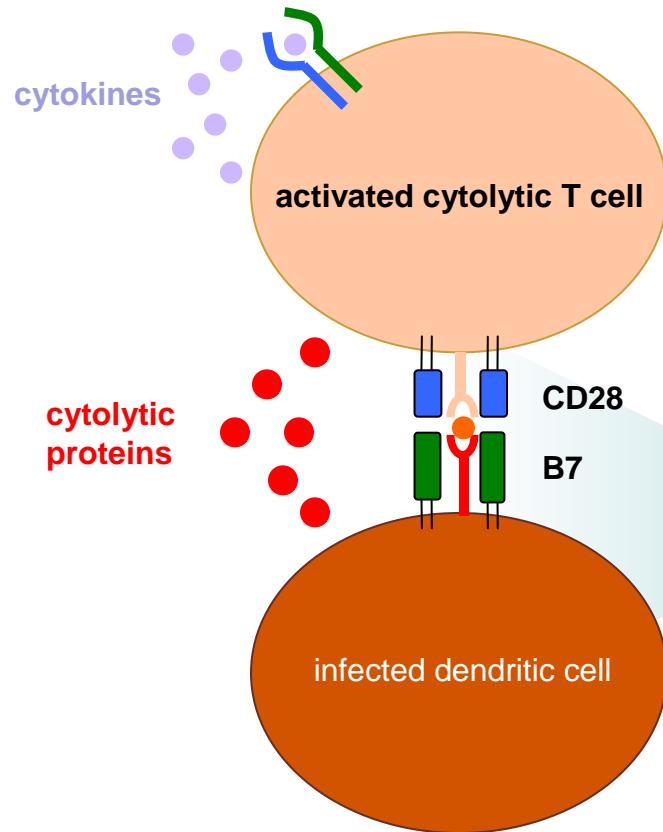

NOR gate

A	B	output
theo	tc	GFP
0	0	1
0	1	0
1	0	0
1	1	0

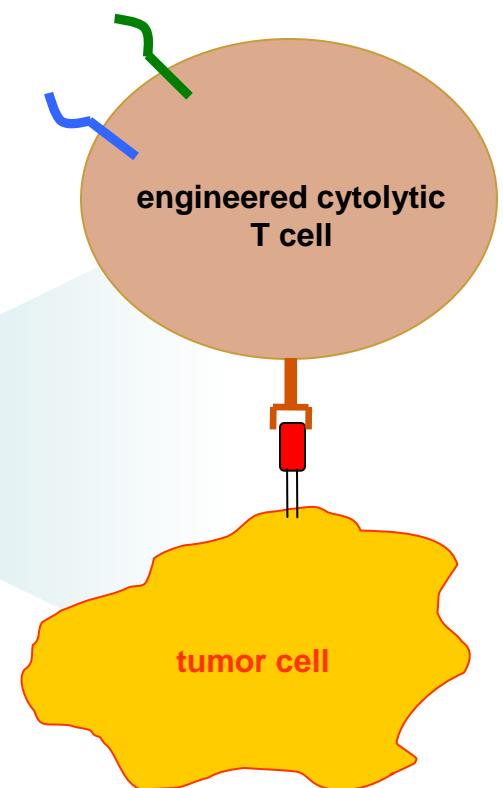

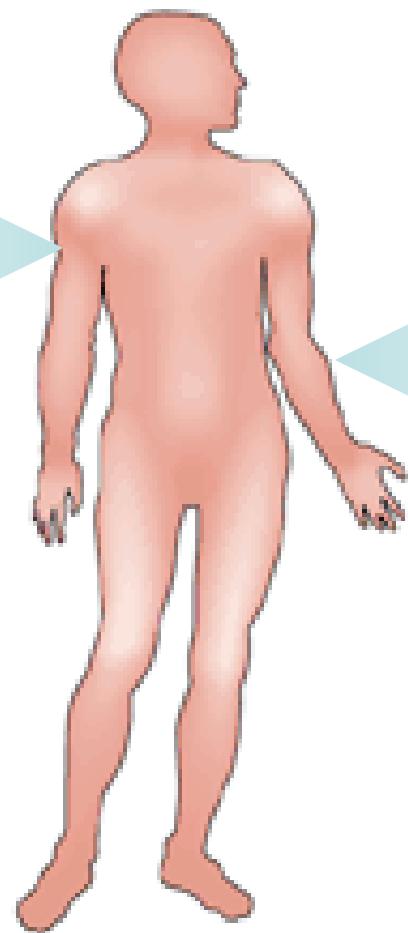

Applications: Cellular therapeutics

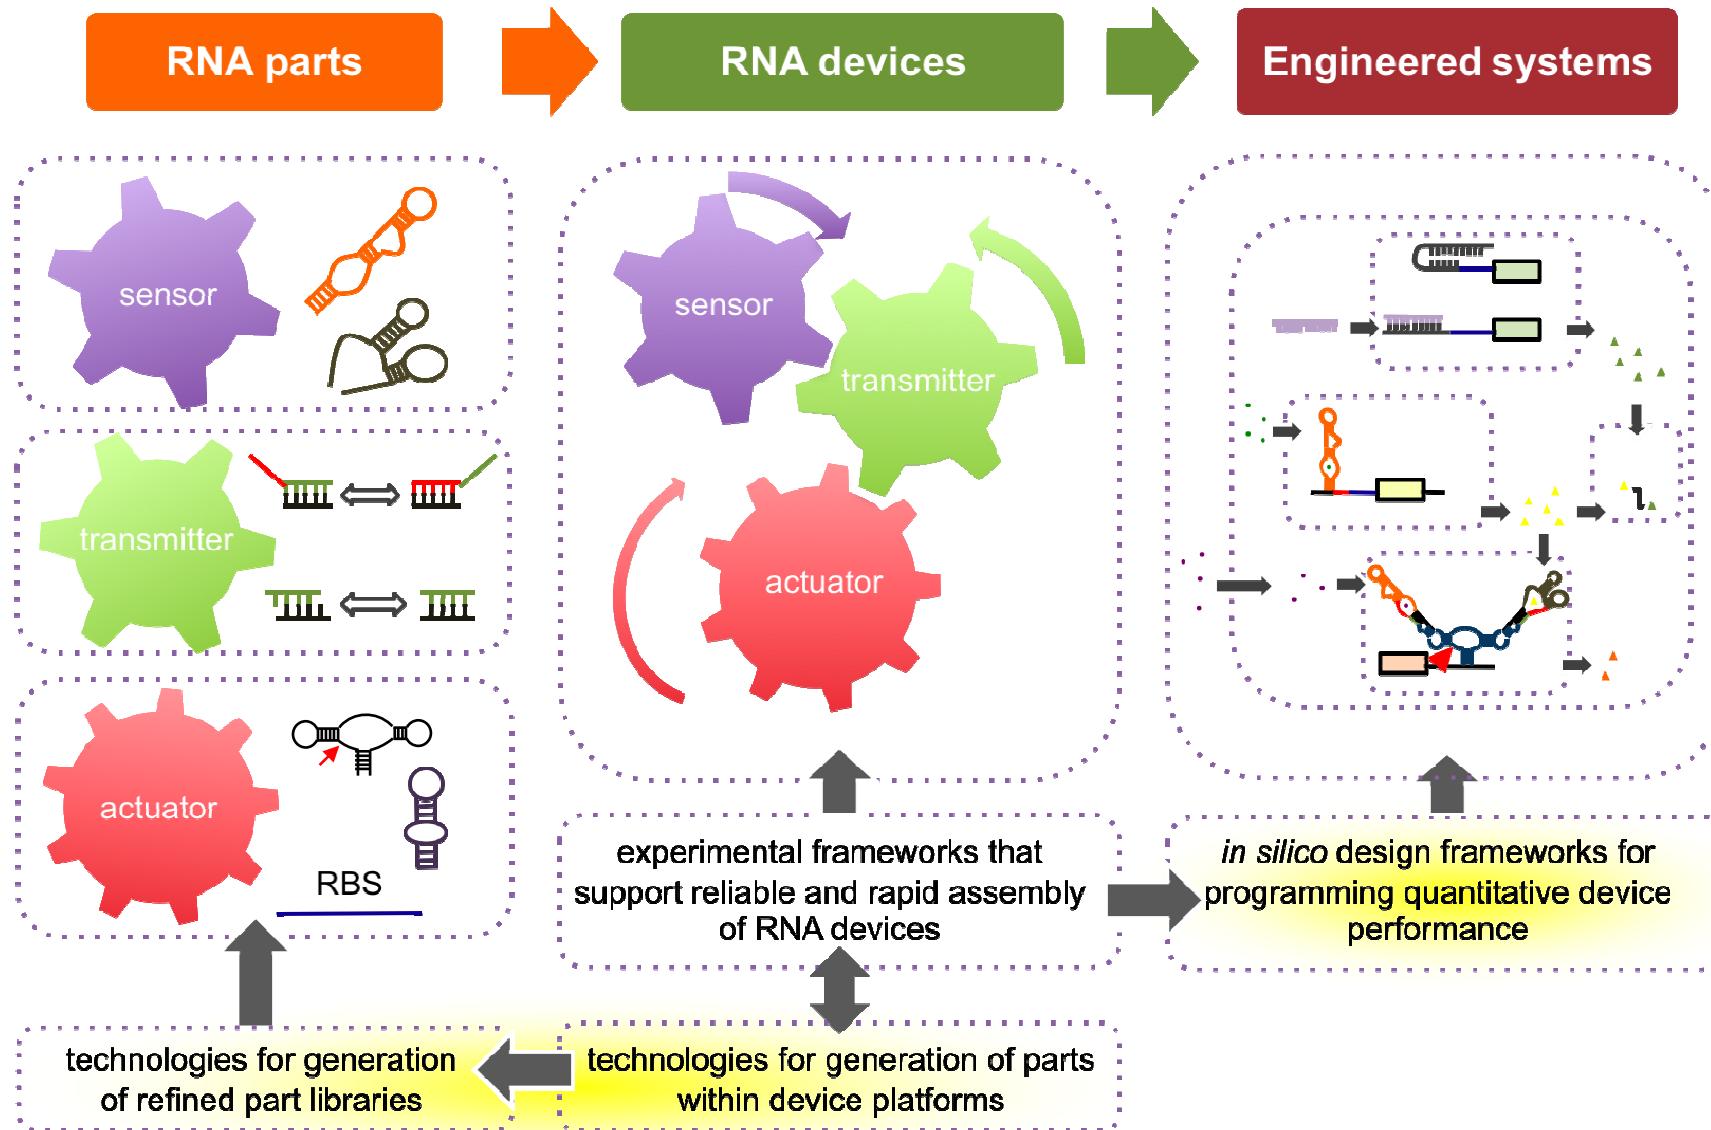

Natural T-cell function

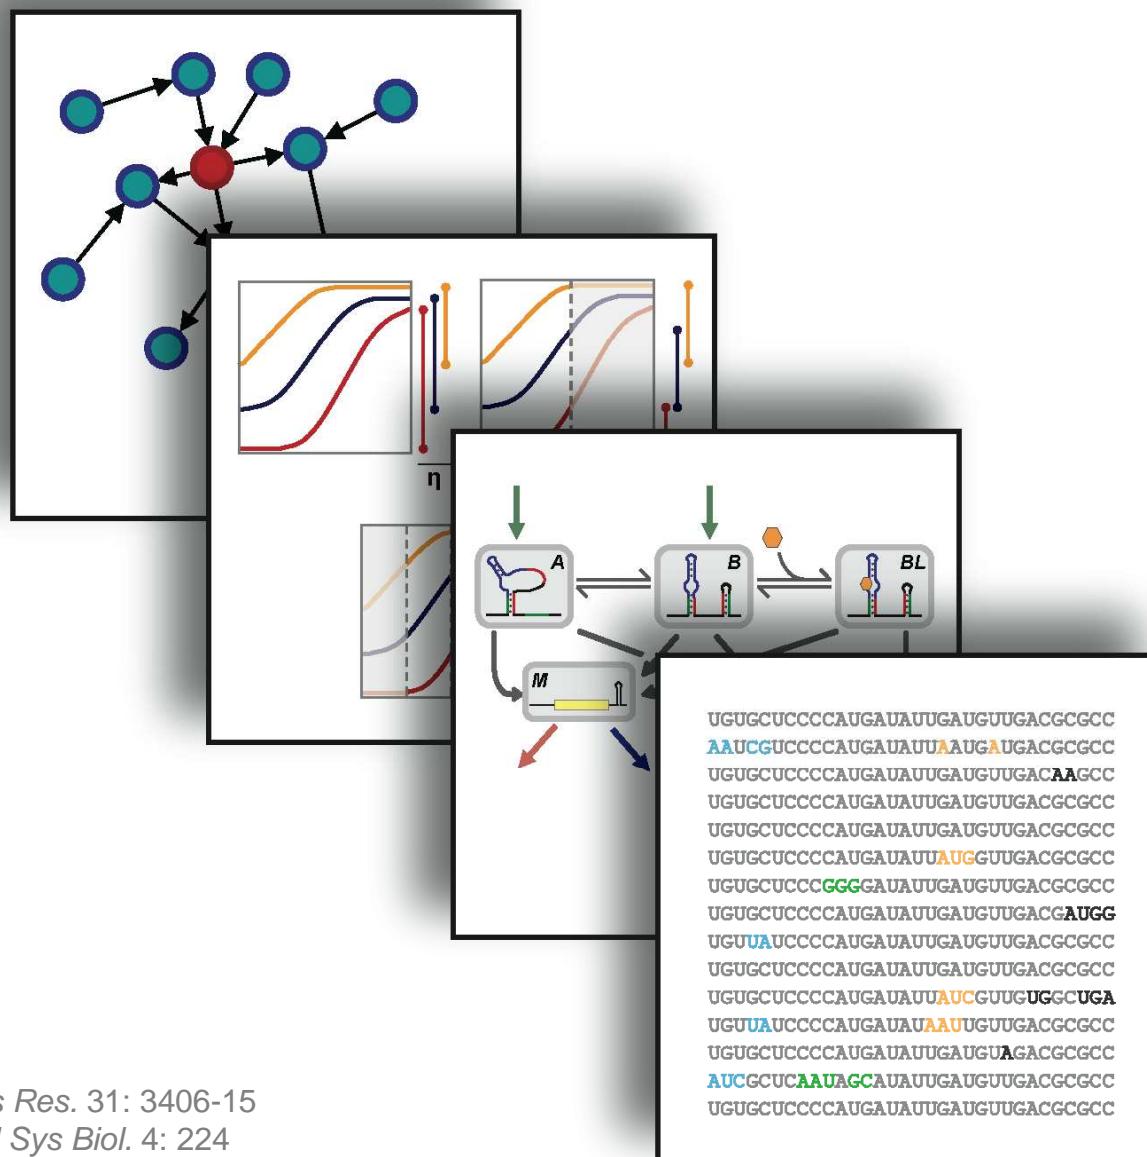

Engineered T-cell function

Challenges to I/O tool development

Design challenge: CAD tools that predict device function from sequence

Zuker, M. 2003. *Nuc Acids Res.* 31: 3406-15

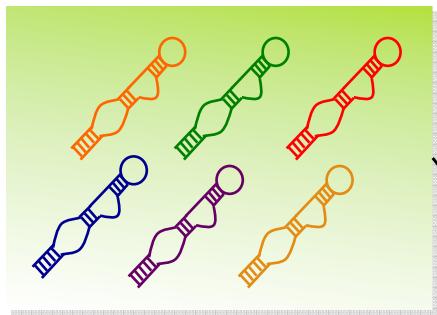

Beisel CL, et al. 2008. *Mol Sys Biol.* 4: 224

Beisel CL, Smolke CD. 2009. *PLoS Comp Biol.* 5: e1000363

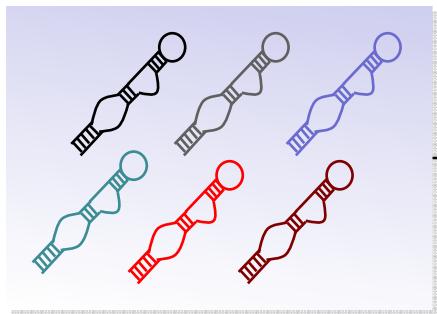

Scalability challenge: libraries of nucleic acid sensors

refined sensor libraries

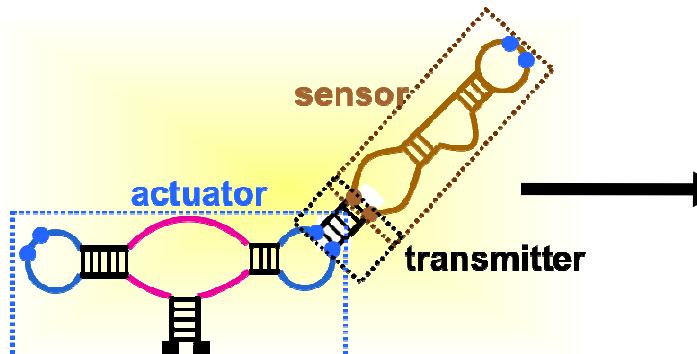

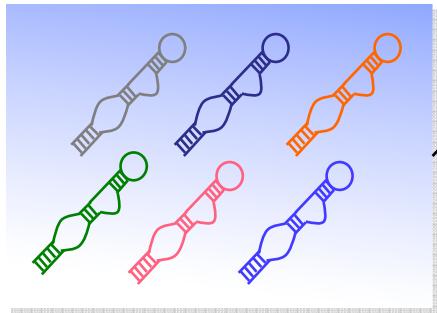

metabolites

disease biomarkers

exogenous chemicals

noninvasive
diagnostics

bioprocessing /
biosynthesis

agricultural
biotechnology

intelligent
therapeutics

*Engineering optimization and development needed on
selection and characterization strategies*

Summary

- The gap between technology/tool development and applications must be bridged
- Invention and implementation of engineering design principles is critical to effective tool development
- Strategies and mindsets supporting the implementation of foundational technologies and tools must be fostered
- Funding and support for new technology and tool development at scales and time frames appropriate for the challenges that must be addressed is critical
