

Shrimp Research Facility - Sonmiani

Hatchery for successful spawning and larval rearing

Maturation Tanks

Larval Rearing Tanks

Nursery Raceways

- Smaller ponds that serves as an intermediate phase between the hatchery and the grow-out ponds.
- Better control over water quality and feed can be implemented.
- Improve survival and feeding efficiency.
- Reduces production cycle duration in grow-out ponds.

Grow-out systems

- The technologically advanced culture systems are intensive culture systems where:
 - stocking density is high
 - nutritionally complete feed is provided
 - mechanical devices are used to circulate and aerate the water
