**ENVIRONMENT**

UNIVERSITY OF MINNESOTA

**Driven to Discover<sup>SM</sup>**

# Big Question

*How will we feed 9 billion people...  
with growing appetites for meat & energy...  
without compromising the environment?*

# Agriculture Dominates the Planet Today

*~40% of global land area*

*~70% of global water withdrawals*

*~30% of greenhouse gas emissions*

*~2x nitrogen & phosphorus flows  
massive driver of biodiversity loss*

# Meeting Growing Demands?

## *Expansion or Intensification?*

# Expansion

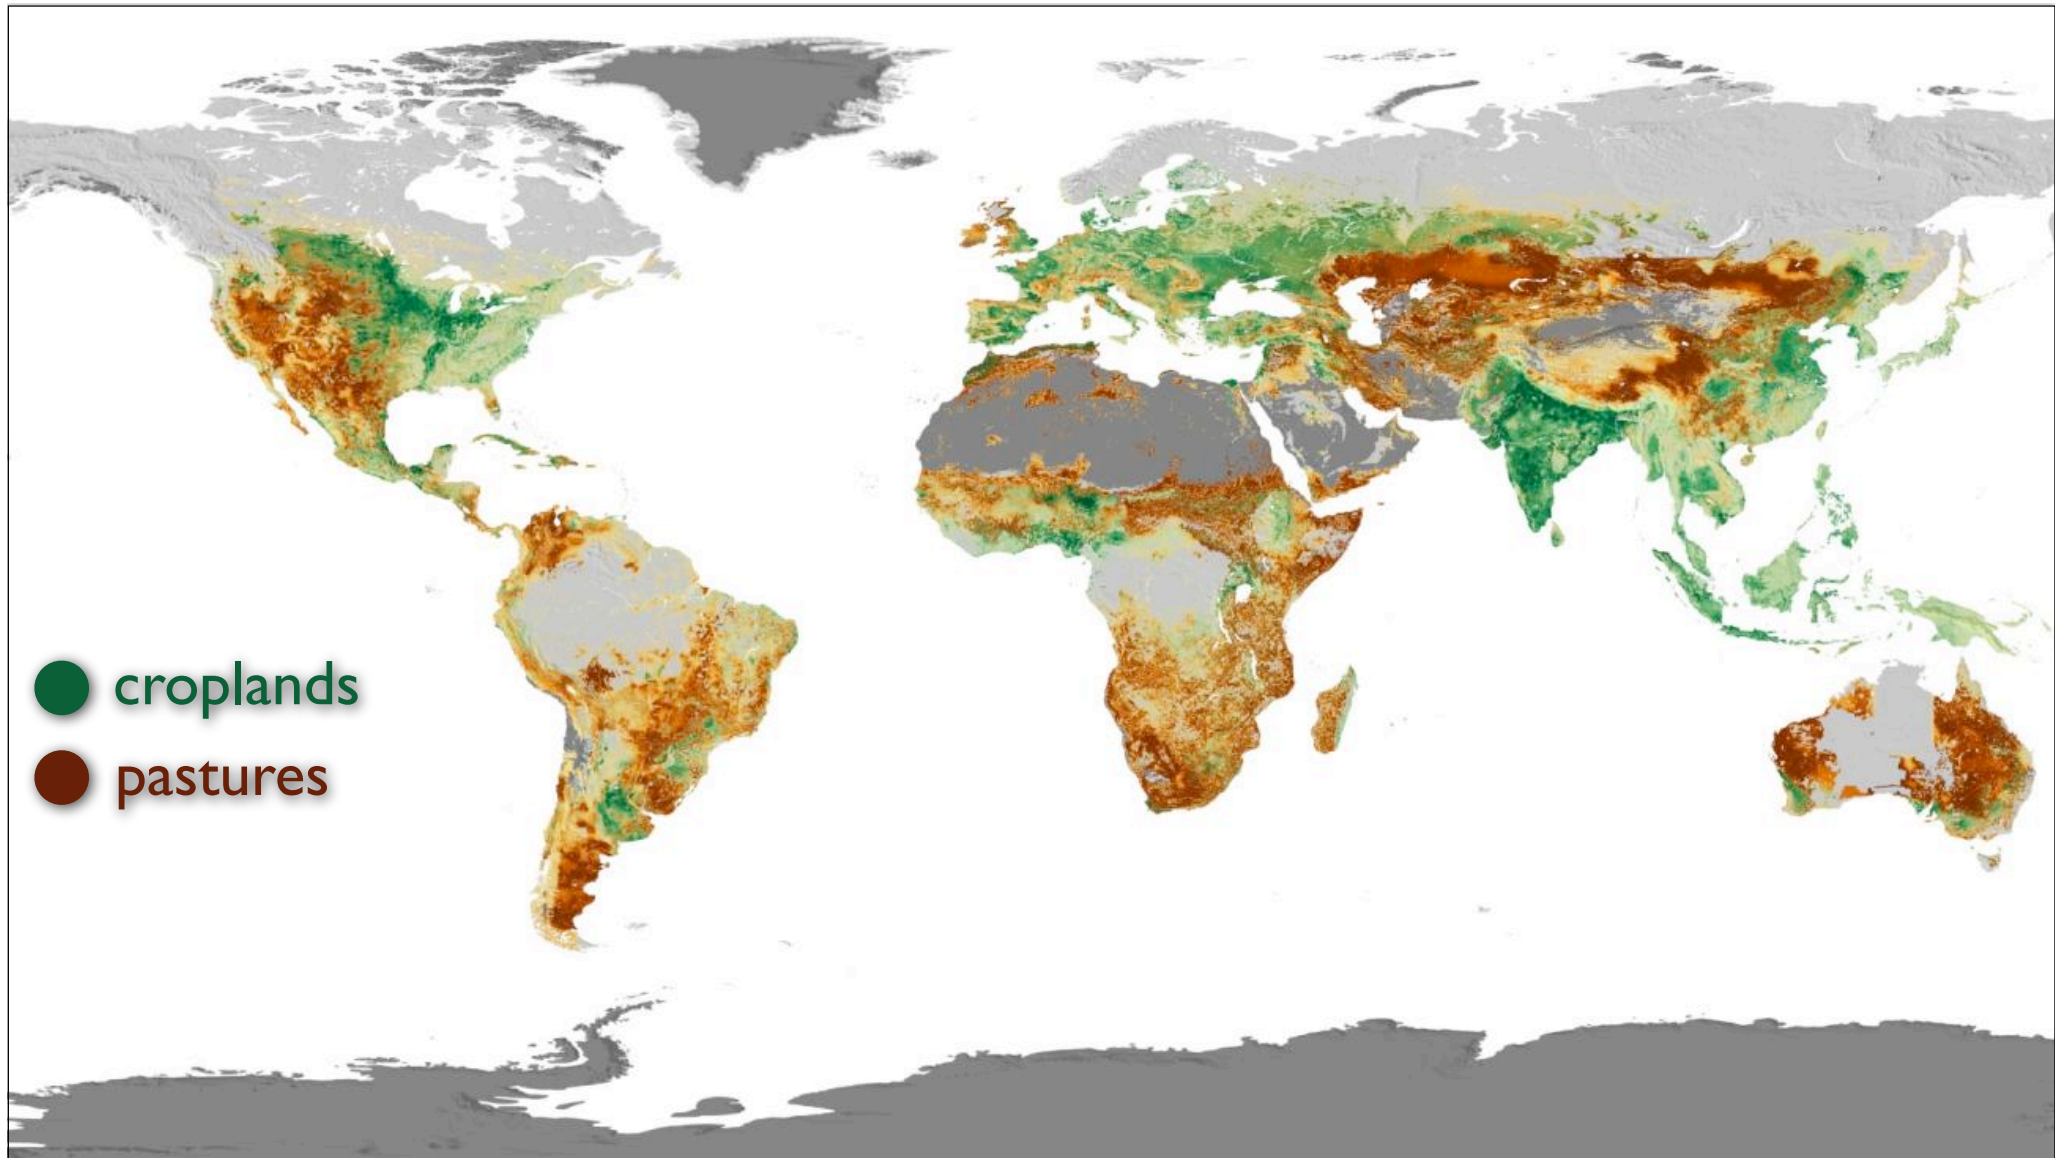

## *Carbon, Climate and Biodiversity Implications*

# Intensification

## *Water and Nutrient Pollution Implications*

# New Tools and Data to Examine Tradeoffs

**maize area**

**% of total land area**

**maize yield**

**tons/ha**

Core GLI Data: Area and Yield for ~175 Crops  
for ~1960-2010

# Key Agricultural Inputs

global nitrogen application

kg N applied per ha of grid cell

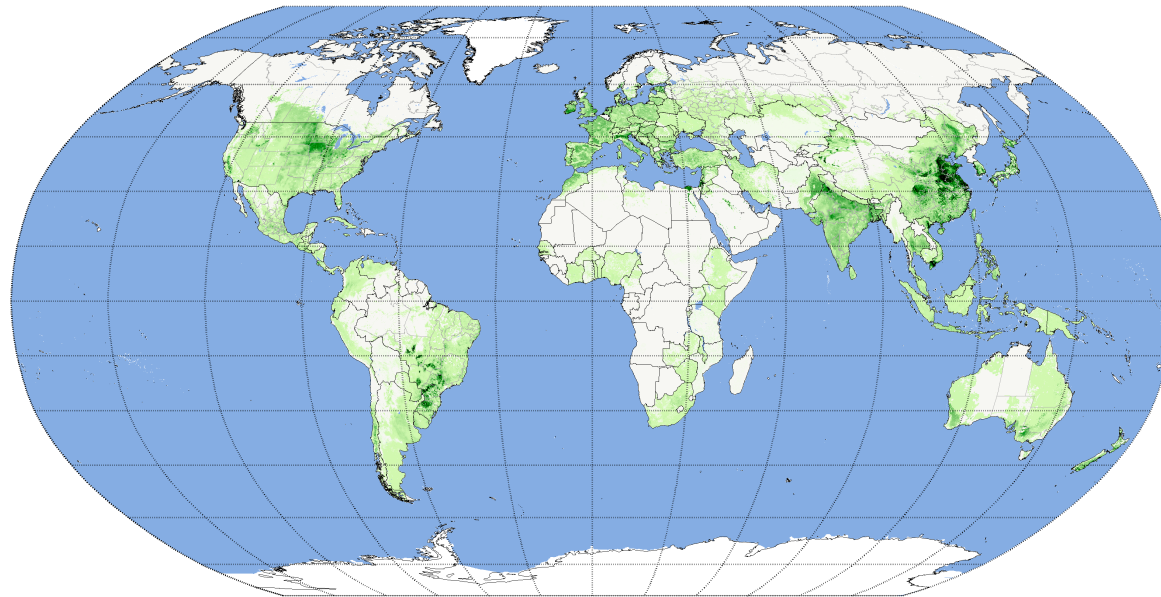

*Fertilizer Data from Mueller et al. (in prep), Irrigation Data from Siebert et al. (2008)*

# Key Agricultural Inputs

## global phosphate application

kg P<sub>2</sub>O<sub>5</sub> applied per ha of grid cell

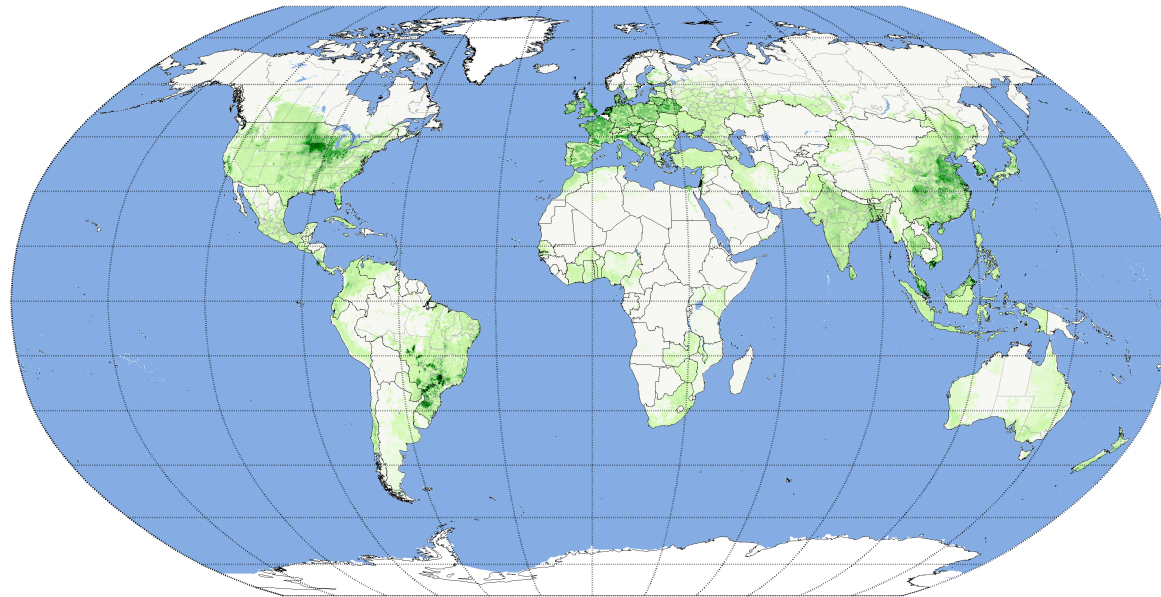

*Fertilizer Data from Mueller et al. (in prep), Irrigation Data from Siebert et al. (2008)*

# Key Agricultural Inputs

global potash application

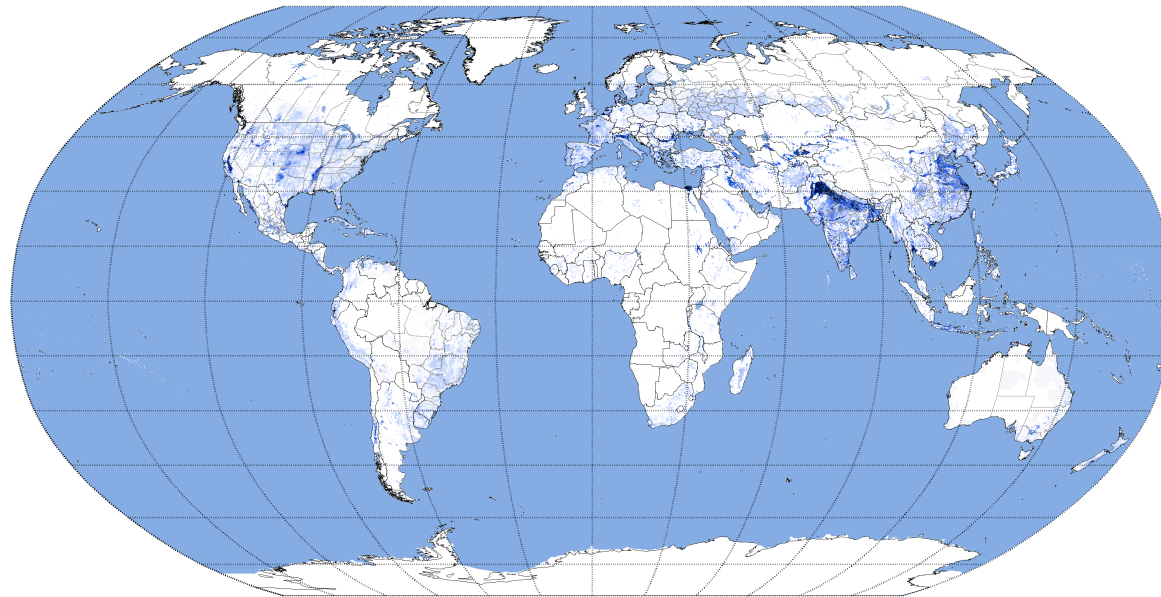

kg K<sub>2</sub>O applied per ha of grid cell

*Fertilizer Data from Mueller et al. (in prep), Irrigation Data from Siebert et al. (2008)*

# Key Agricultural Inputs

**global irrigated lands**

**percent of grid cell equipped for irrigation**

*Fertilizer Data from Mueller et al. (in prep), Irrigation Data from Siebert et al. (2008)*

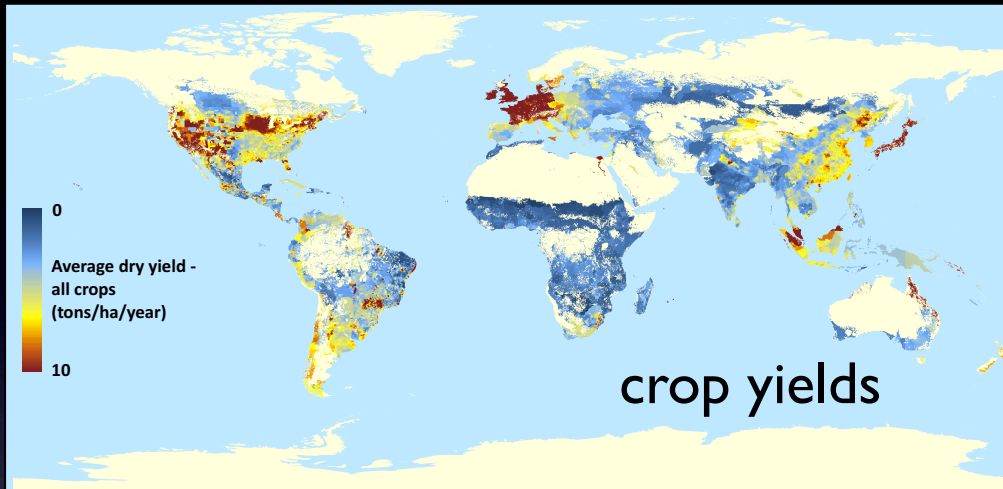

# Cropland Expansion

# Yield : Carbon Tradeoffs

*West et al., Proceedings of the Natl. Academy Sciences (PNAS), 2010*

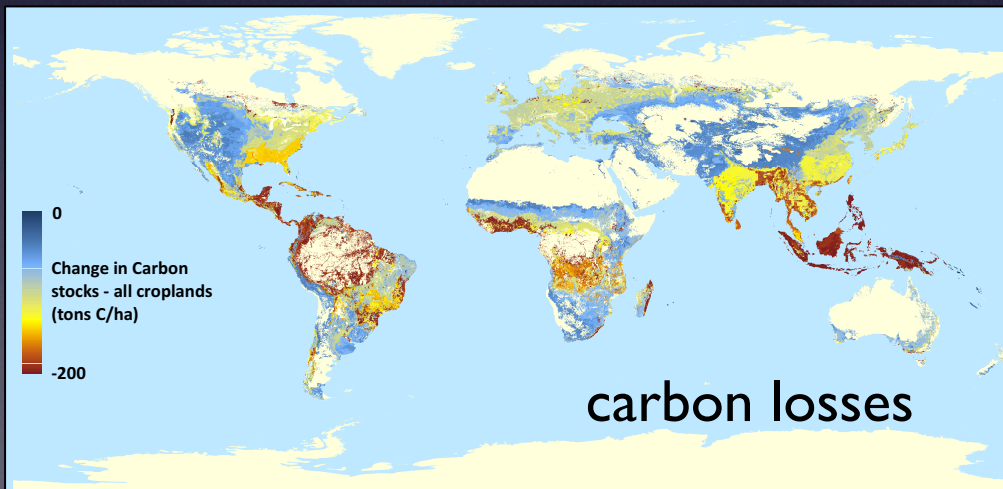

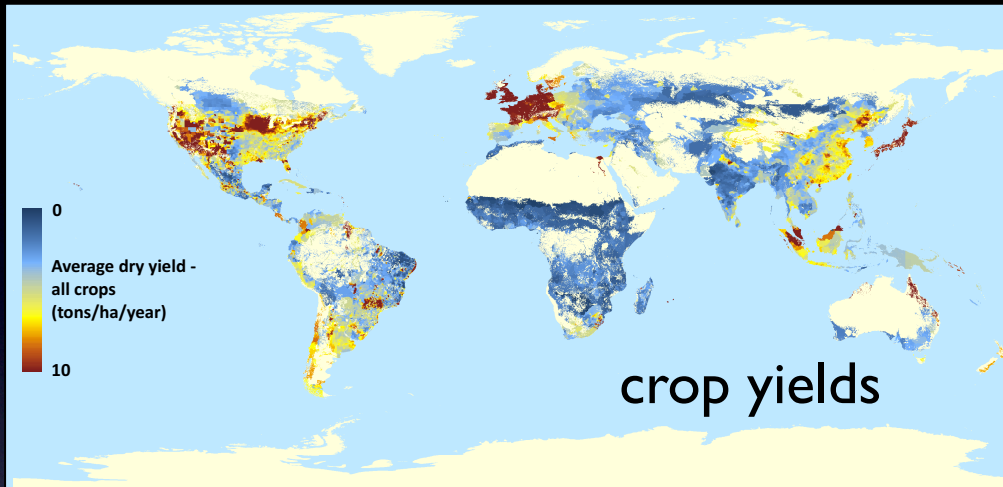

# Yield : Carbon Tradeoffs

West et al., *Proceedings of the Natl. Academy Sciences (PNAS)*, 2010

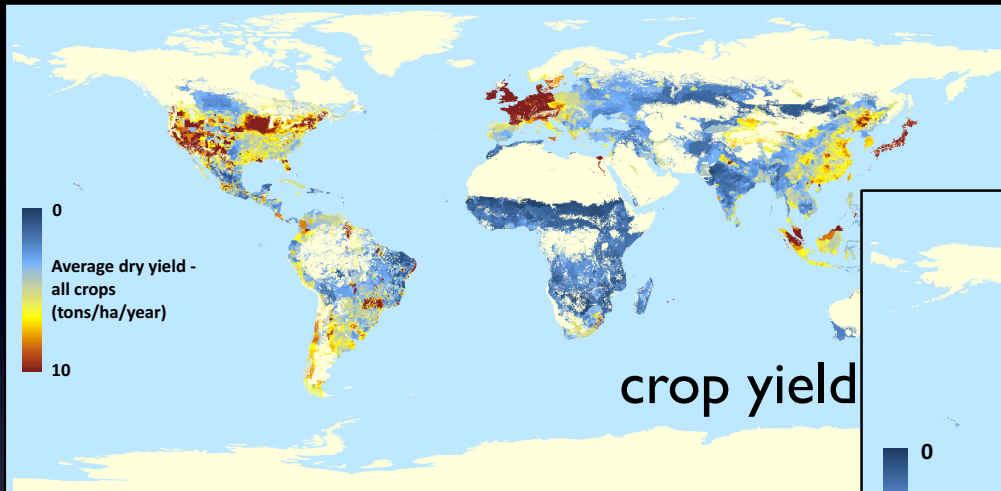

# Yield : Carbon Tradeoffs

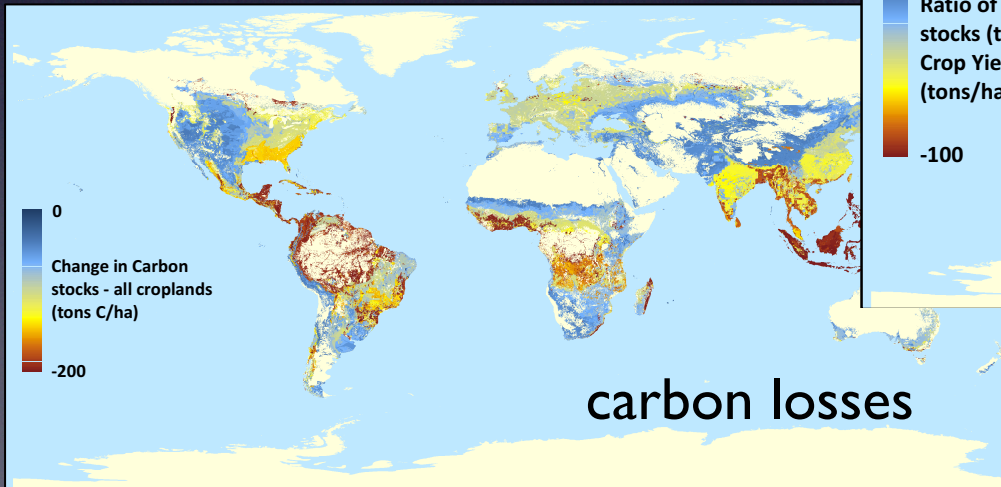

West et al., *Proceedings of the Natl. Academy Sciences (PNAS)*, 2010

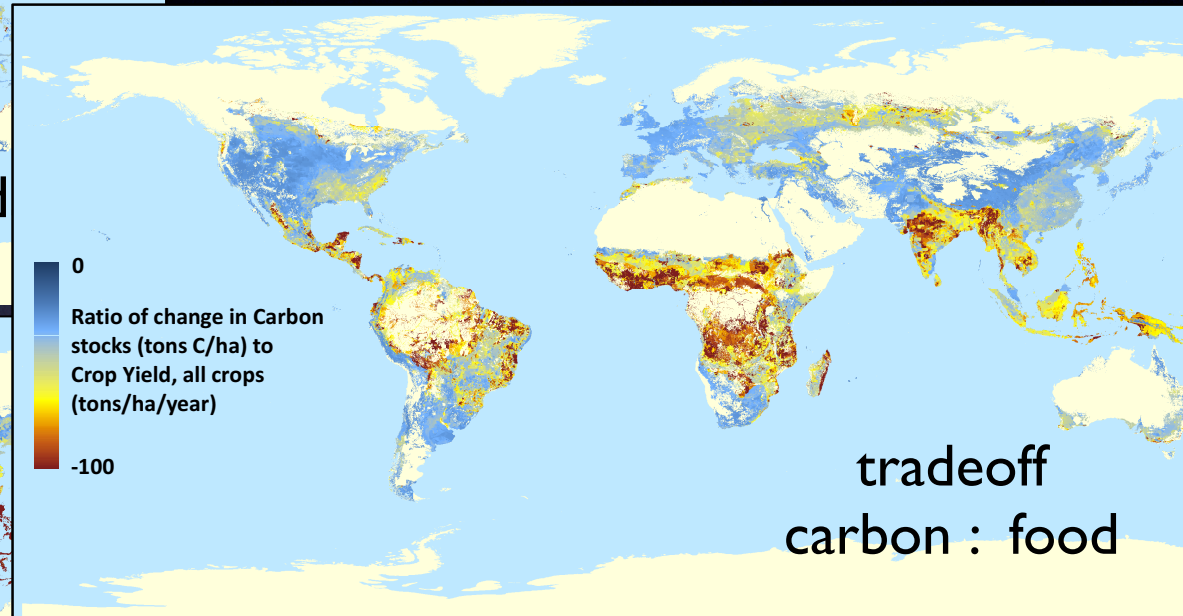

# Yield : Carbon Tradeoffs

crop yield

carbon losses

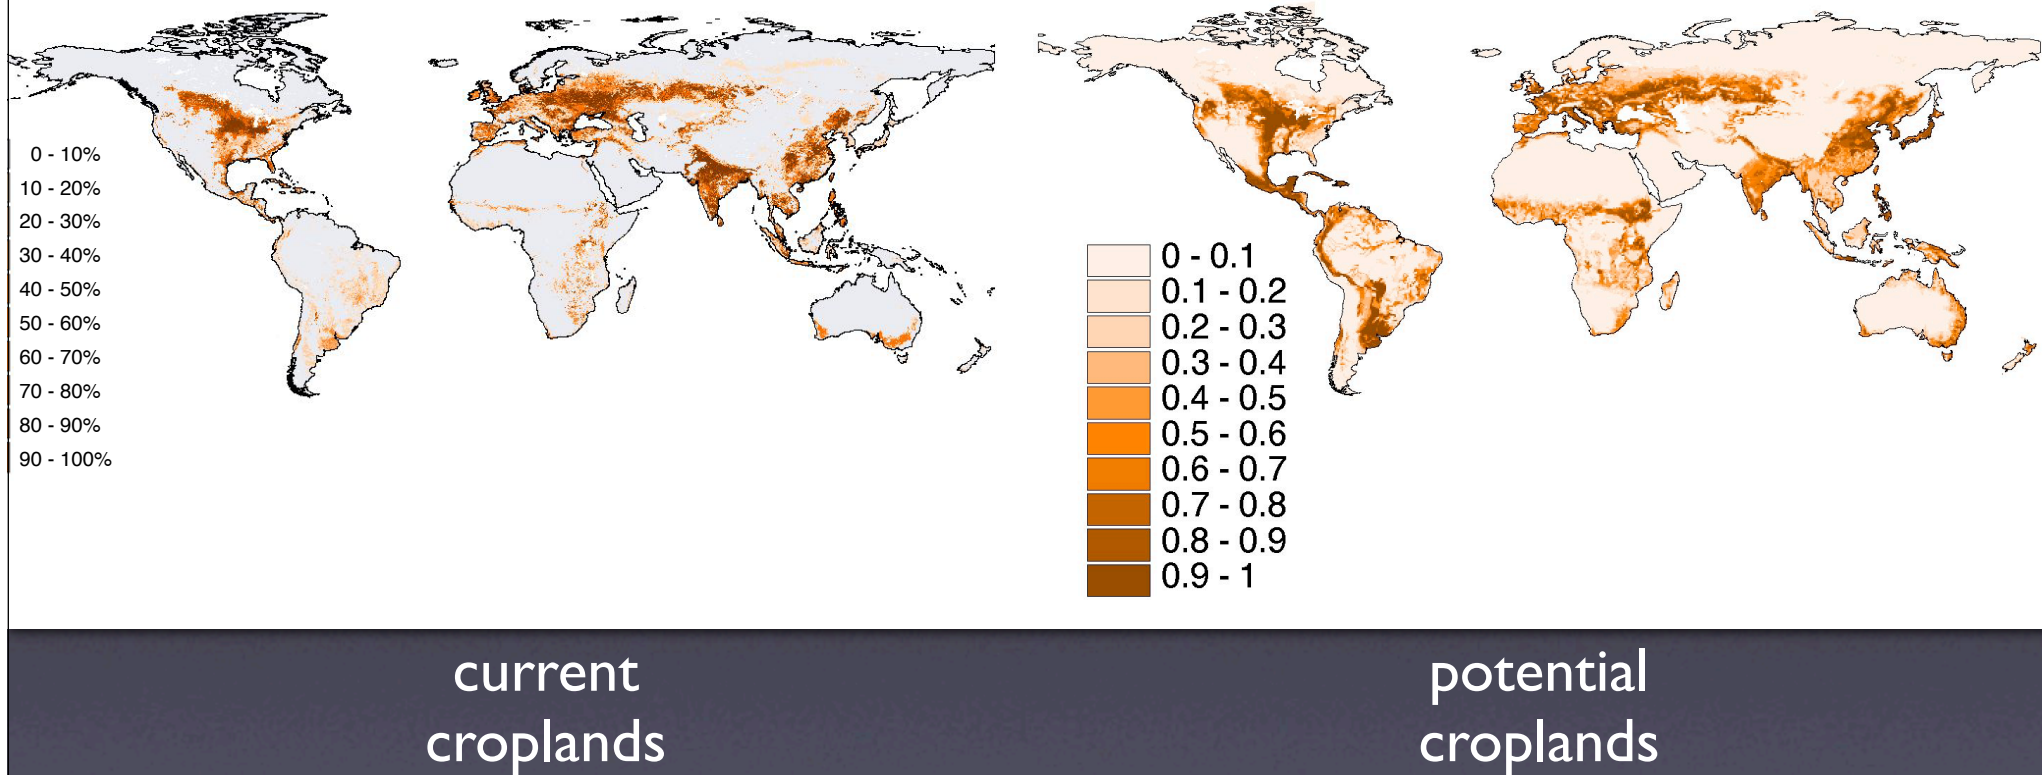

tradeoff  
carbon : food

Data Min = 0.01272, Max = 6.43286

# Boosting Yields? Closing Yield Gaps?

Data from Licker et al., 2010

Equirectangular projection centered on 0.0°E

Data Min = 0.01272, Max = 6.43286

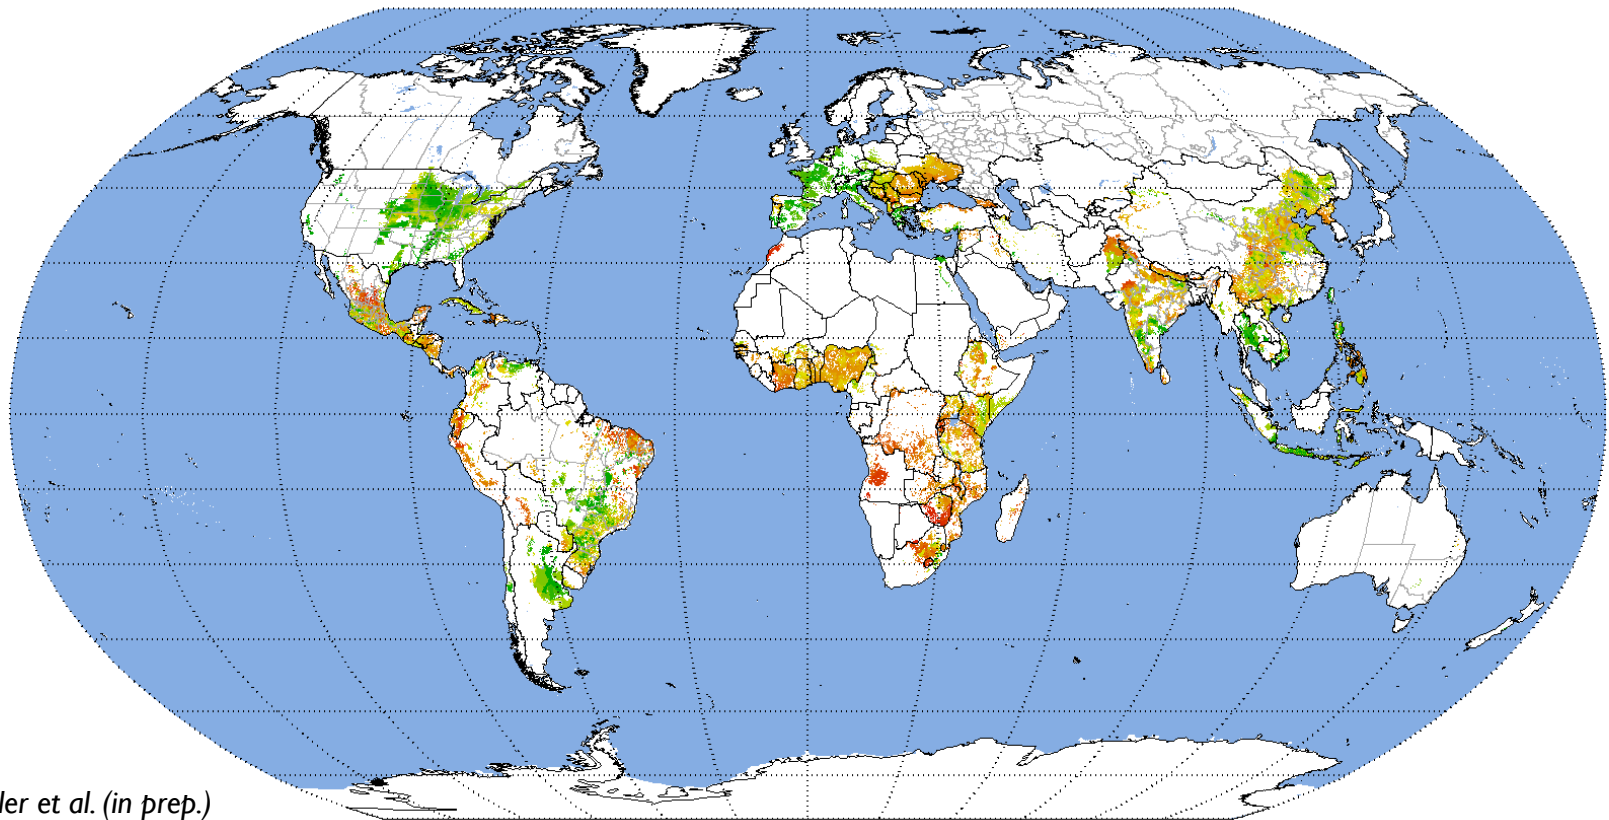

Equirectangular projection centered on 0.0°E

Data Min = 0.01272, Max = 6.43286

# Improving Yields

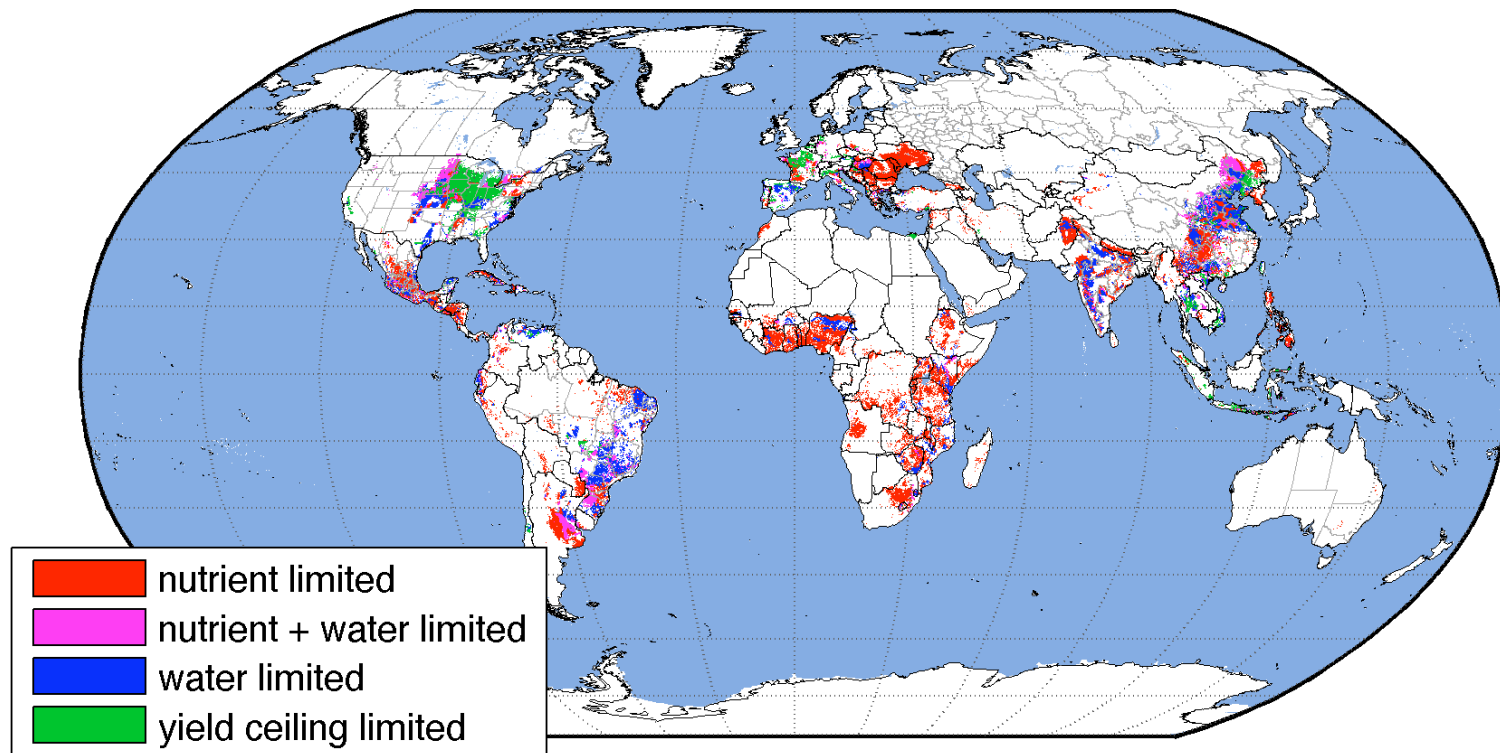

## maize yield attainment

*data from Mueller et al. (in prep.)*

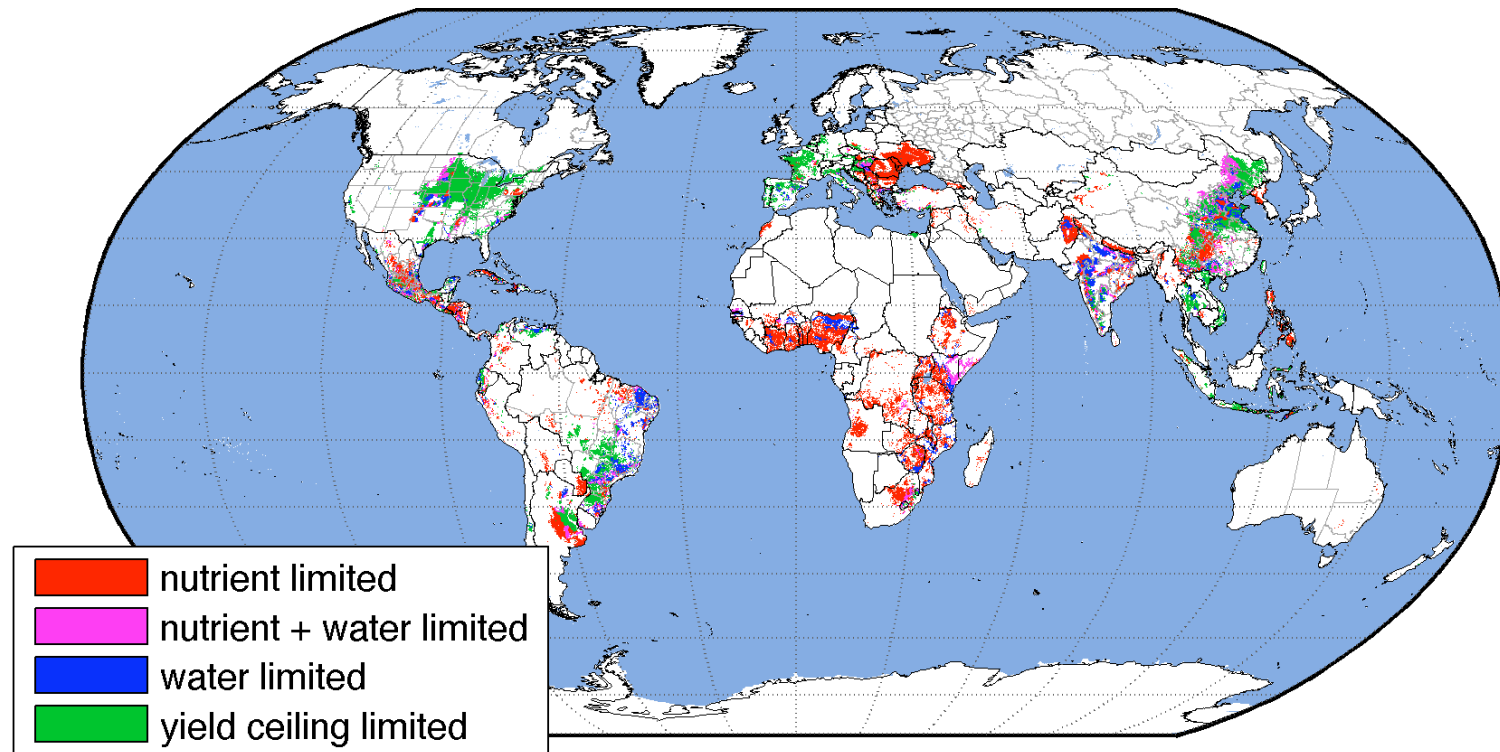

# What's Limiting?

maize: factors limiting yield increase of 20%

# What's Limiting?

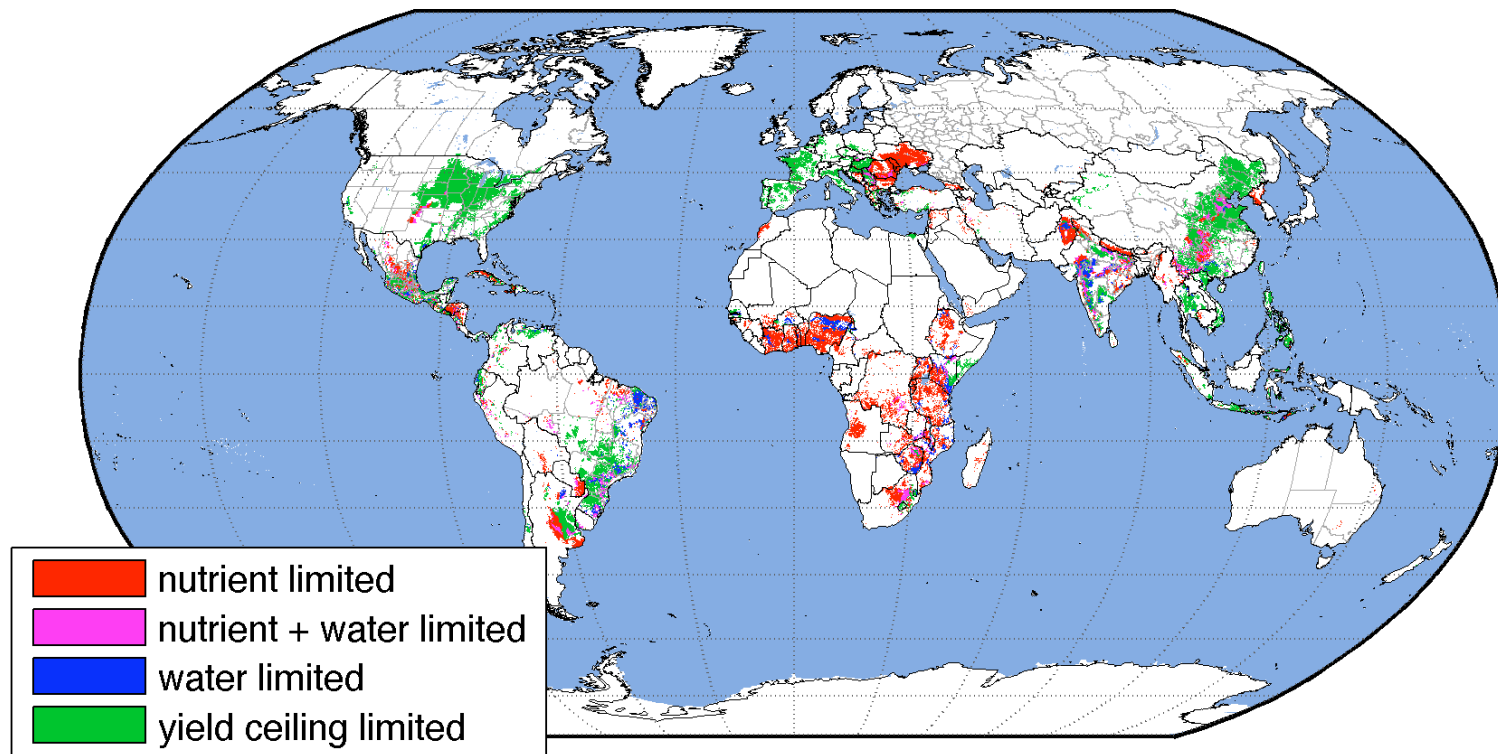

maize: factors limiting yield increase of 50%

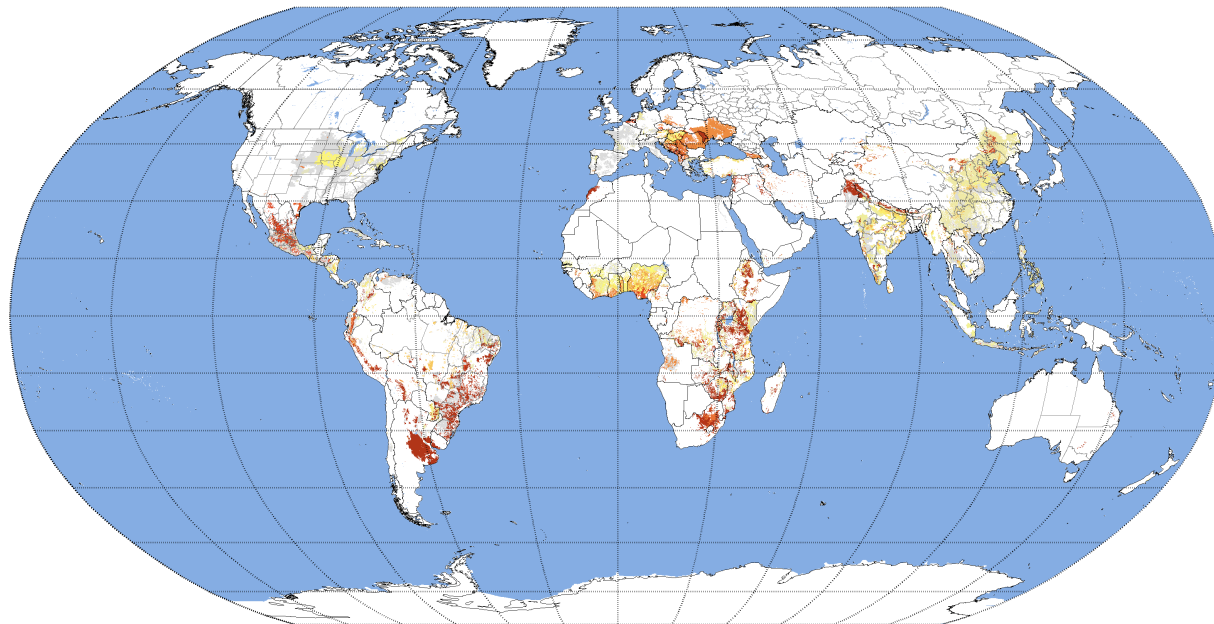

# What's Limiting?

maize: factors limiting yield increase of 100%

# What Would it Take?

nitrogen required to close yield gap: maize

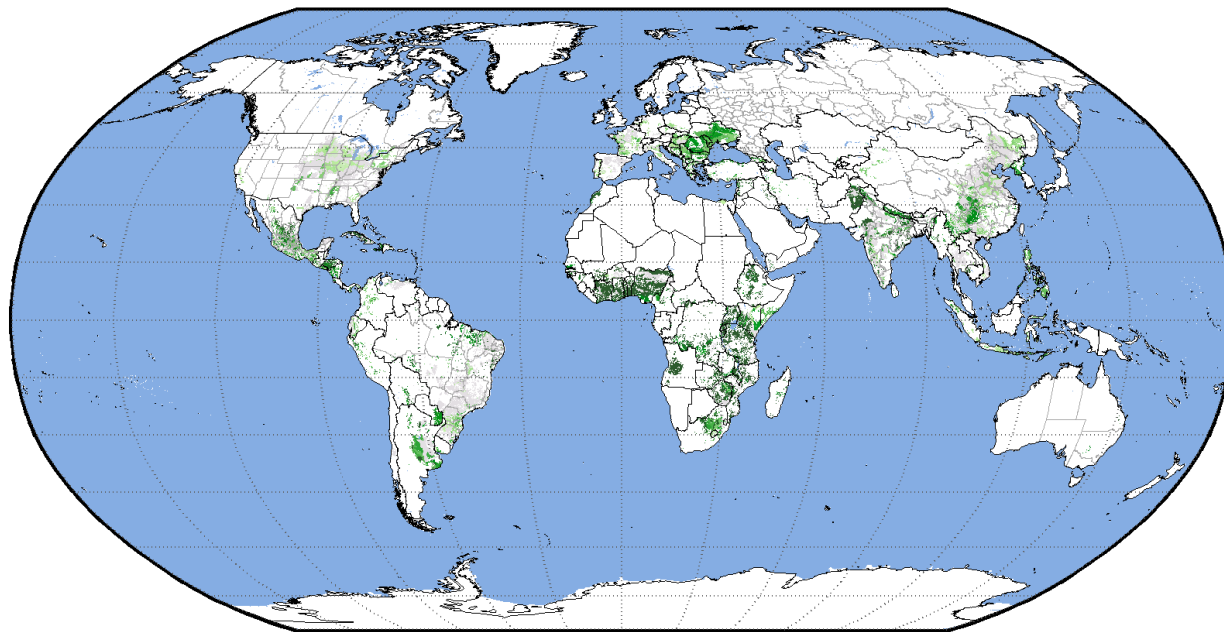

kg/ha increase in N application

# What Would it Take?

maize response to a 20:10:10 kg/ha increase in NPK fertilizer

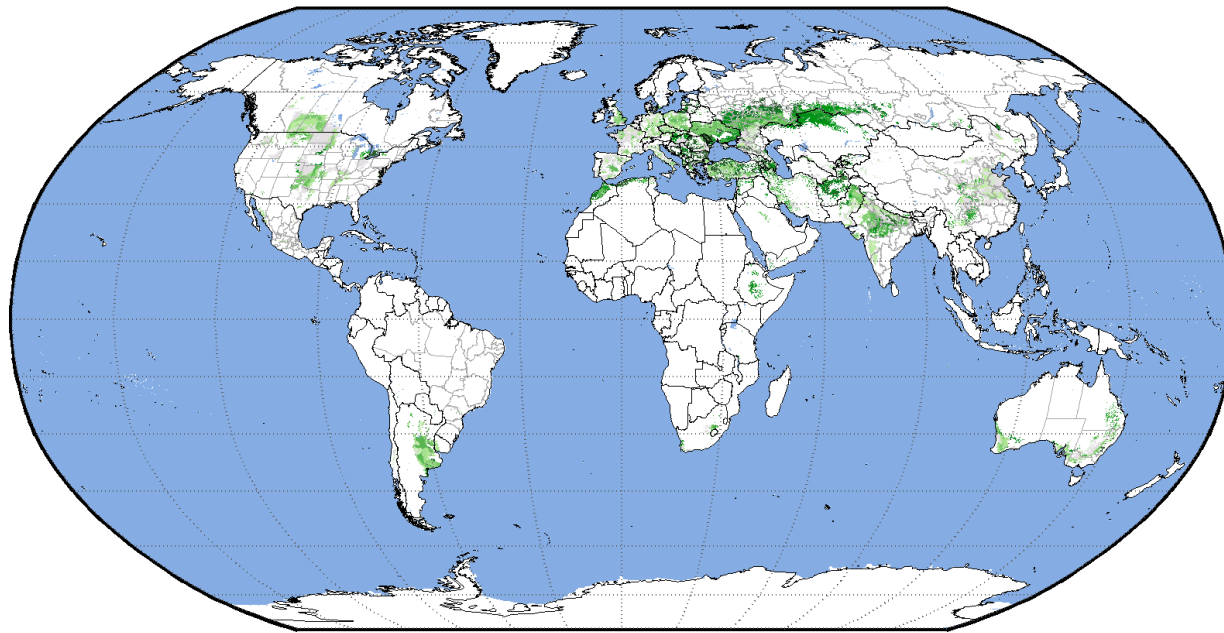

percent yield change

# What Would it Take?

wheat response to a 20:10:10 kg/ha increase in NPK fertilizer

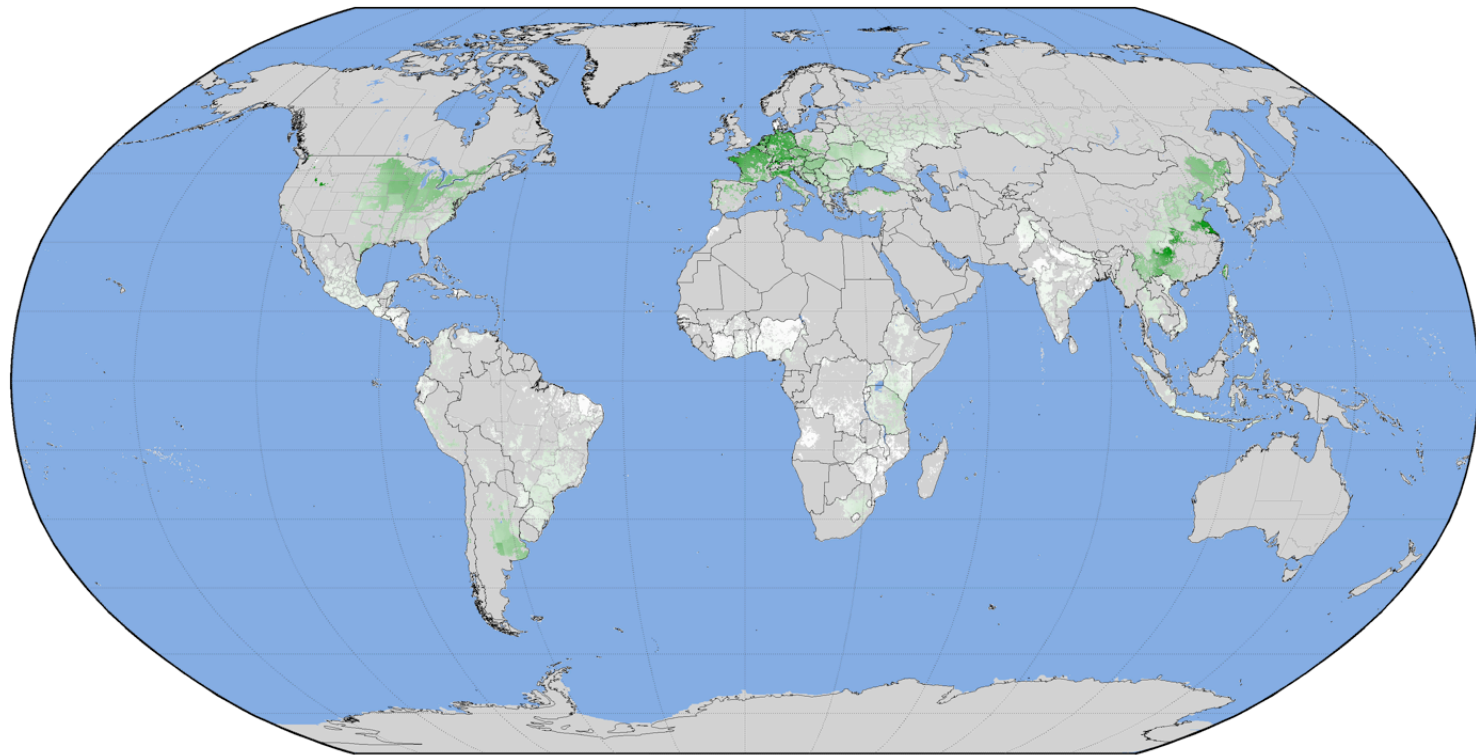

percent yield change

# Important Opportunity

*Increase Efficiency of Croplands*

### Rainfed Maize: Water Use Efficiency

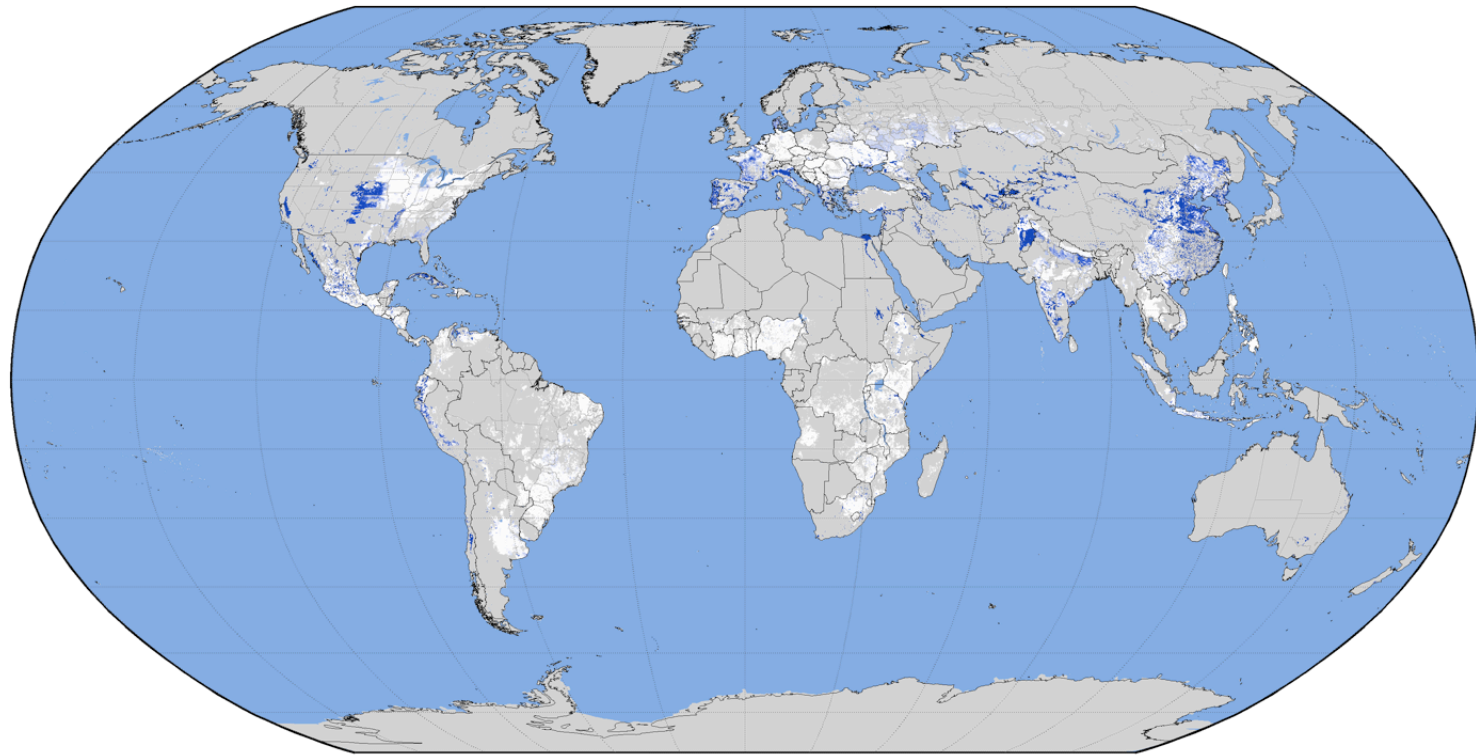

Maize Production per Meter of Rainfall per Hectare (ton/m/ha)

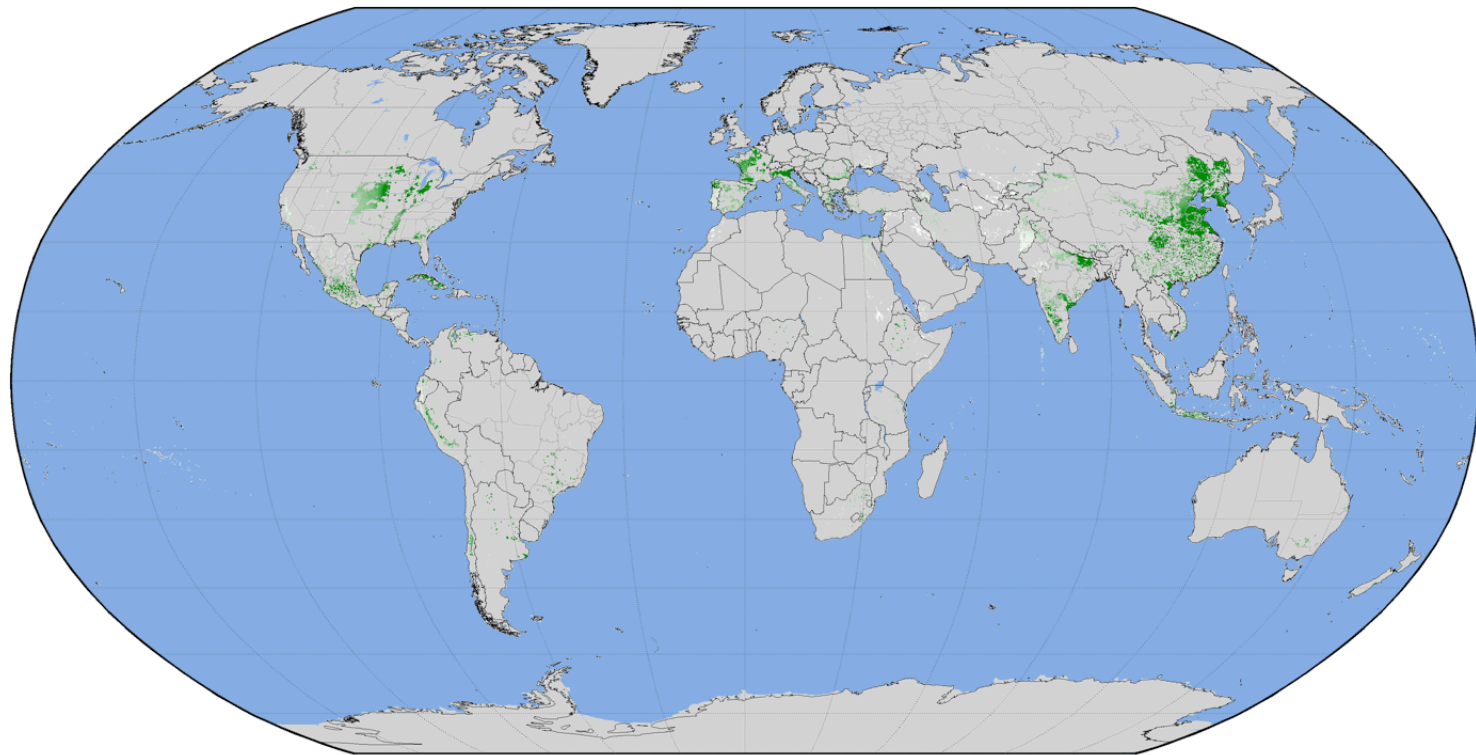

### Areas of Irrigated Maize Production

% of Maize Production Area that is Irrigated

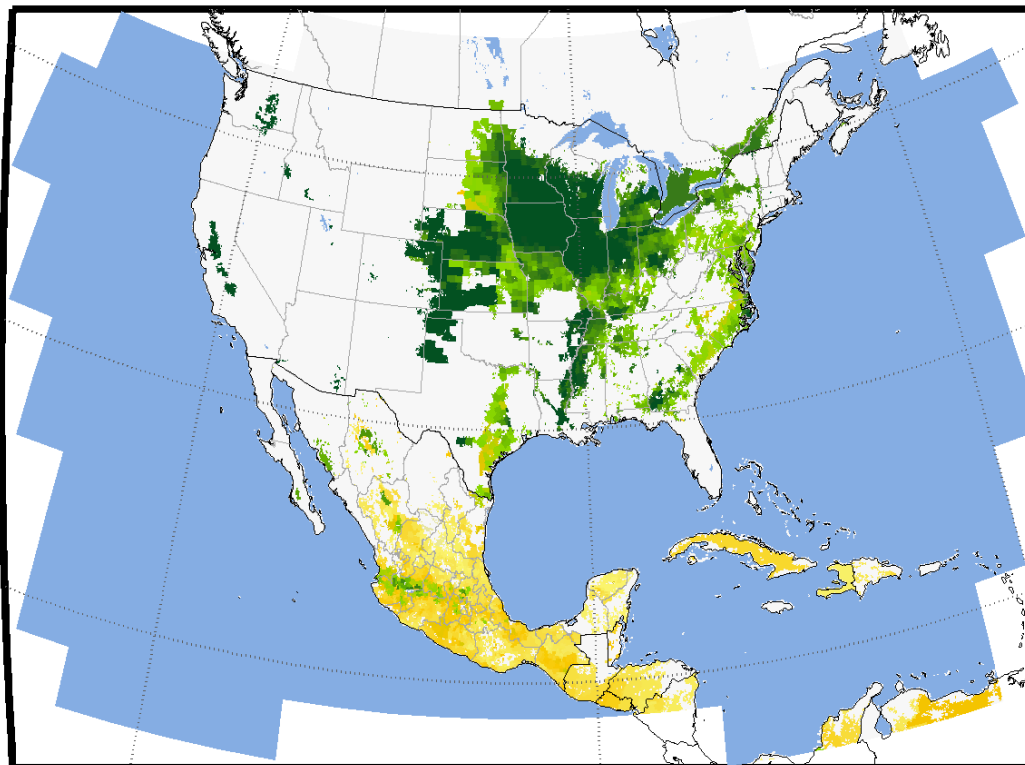

### Irrigated Maize: Irrigation Water Use Efficiency

Maize Production per meter of Irrigation Water per Hectare (ton/m/ha)

## Maize calories produced

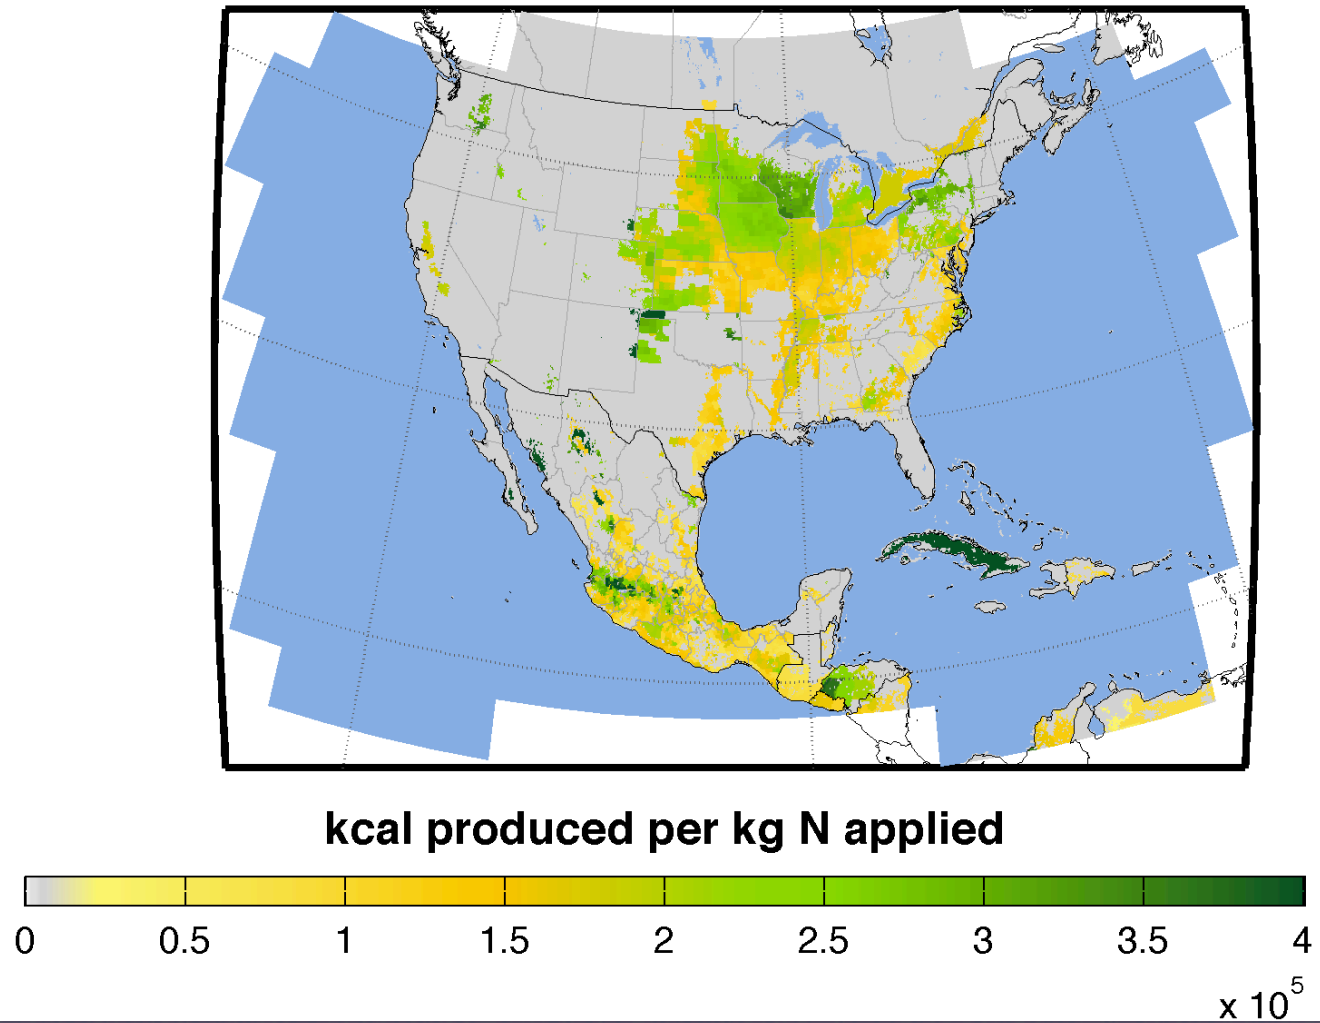

kcal produced per hectare

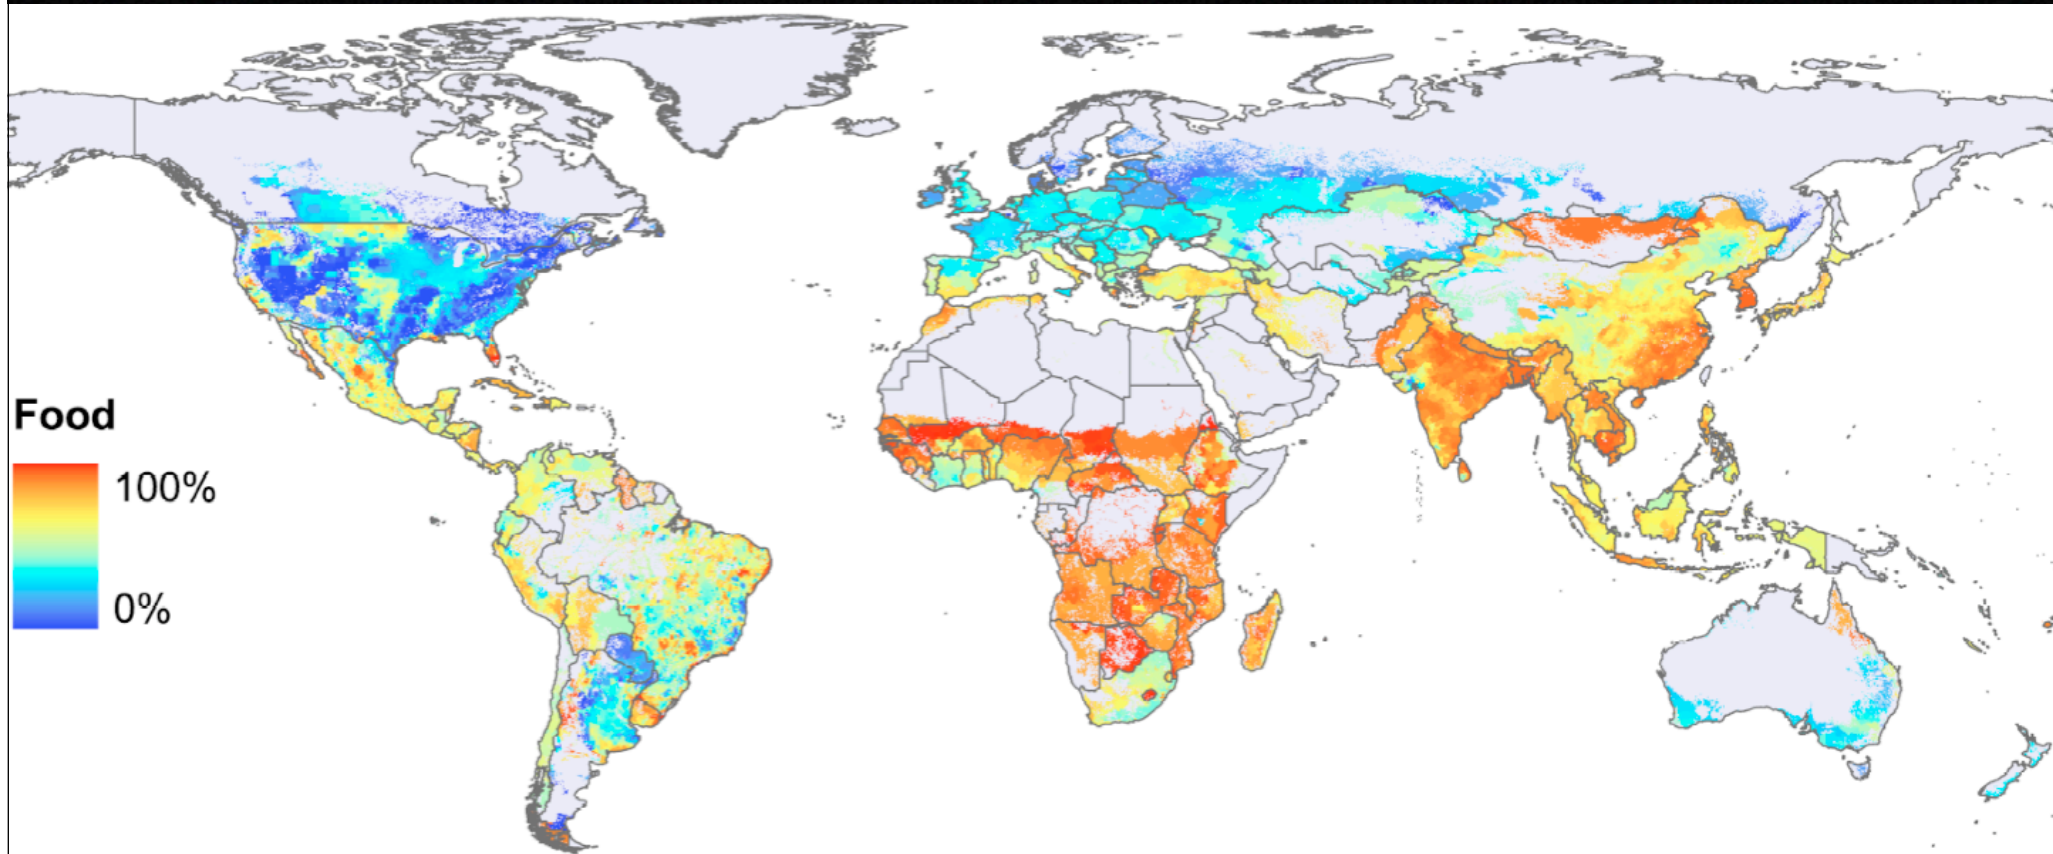

## Maize calories produced per Nitrogen applied

# Another Possibility

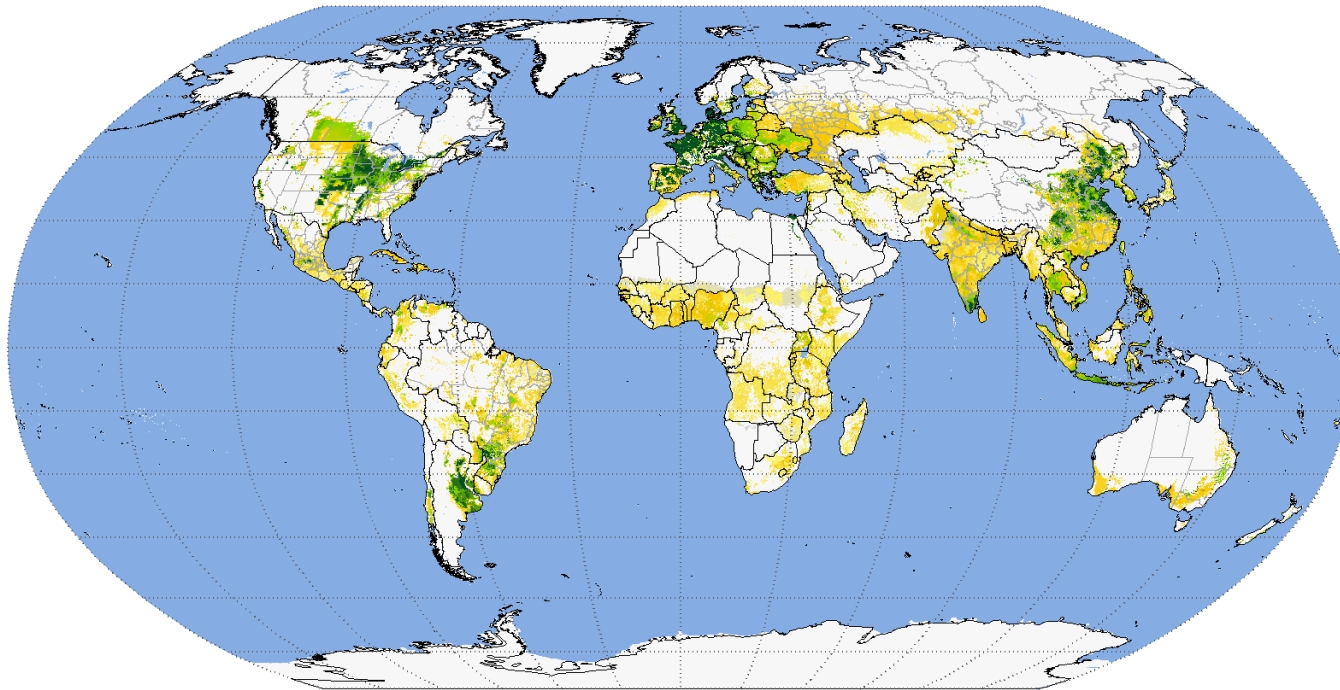

## *Change Allocation of Crops*

# Food (Direct) from Crops

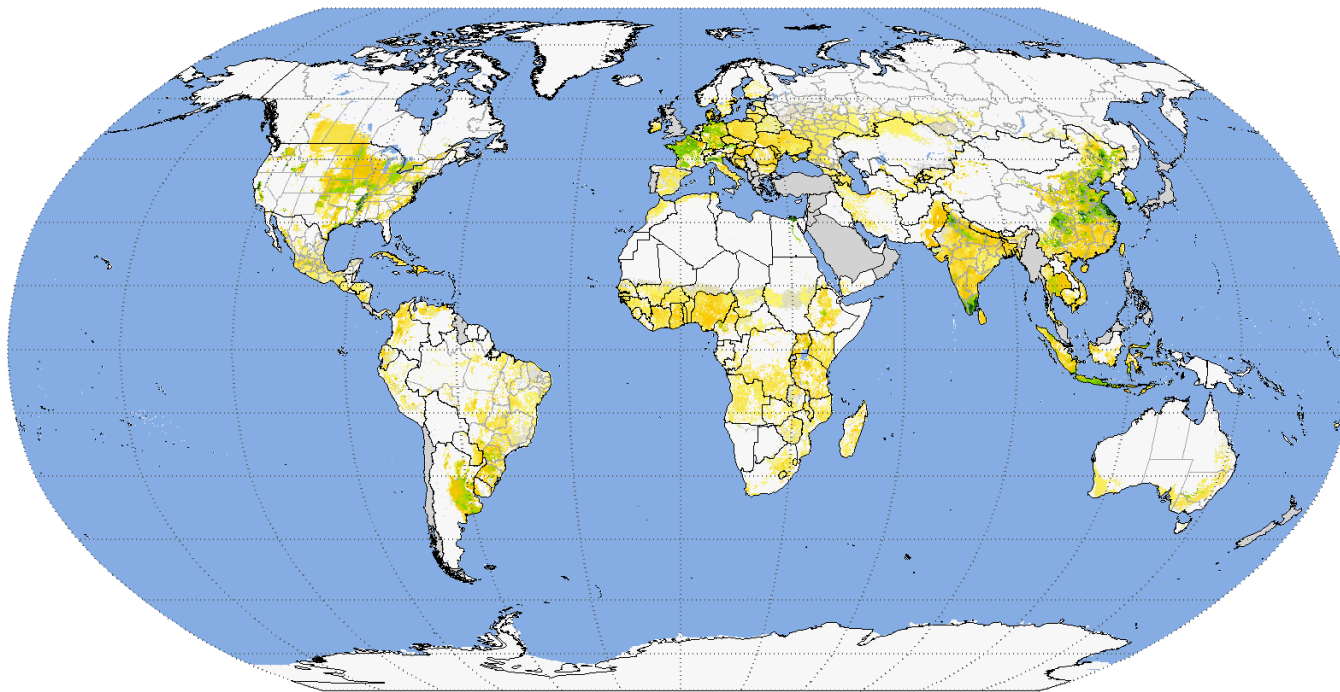

## Major crops, calories produced

kcal per hectare

## Major crops, calories delivered to humans

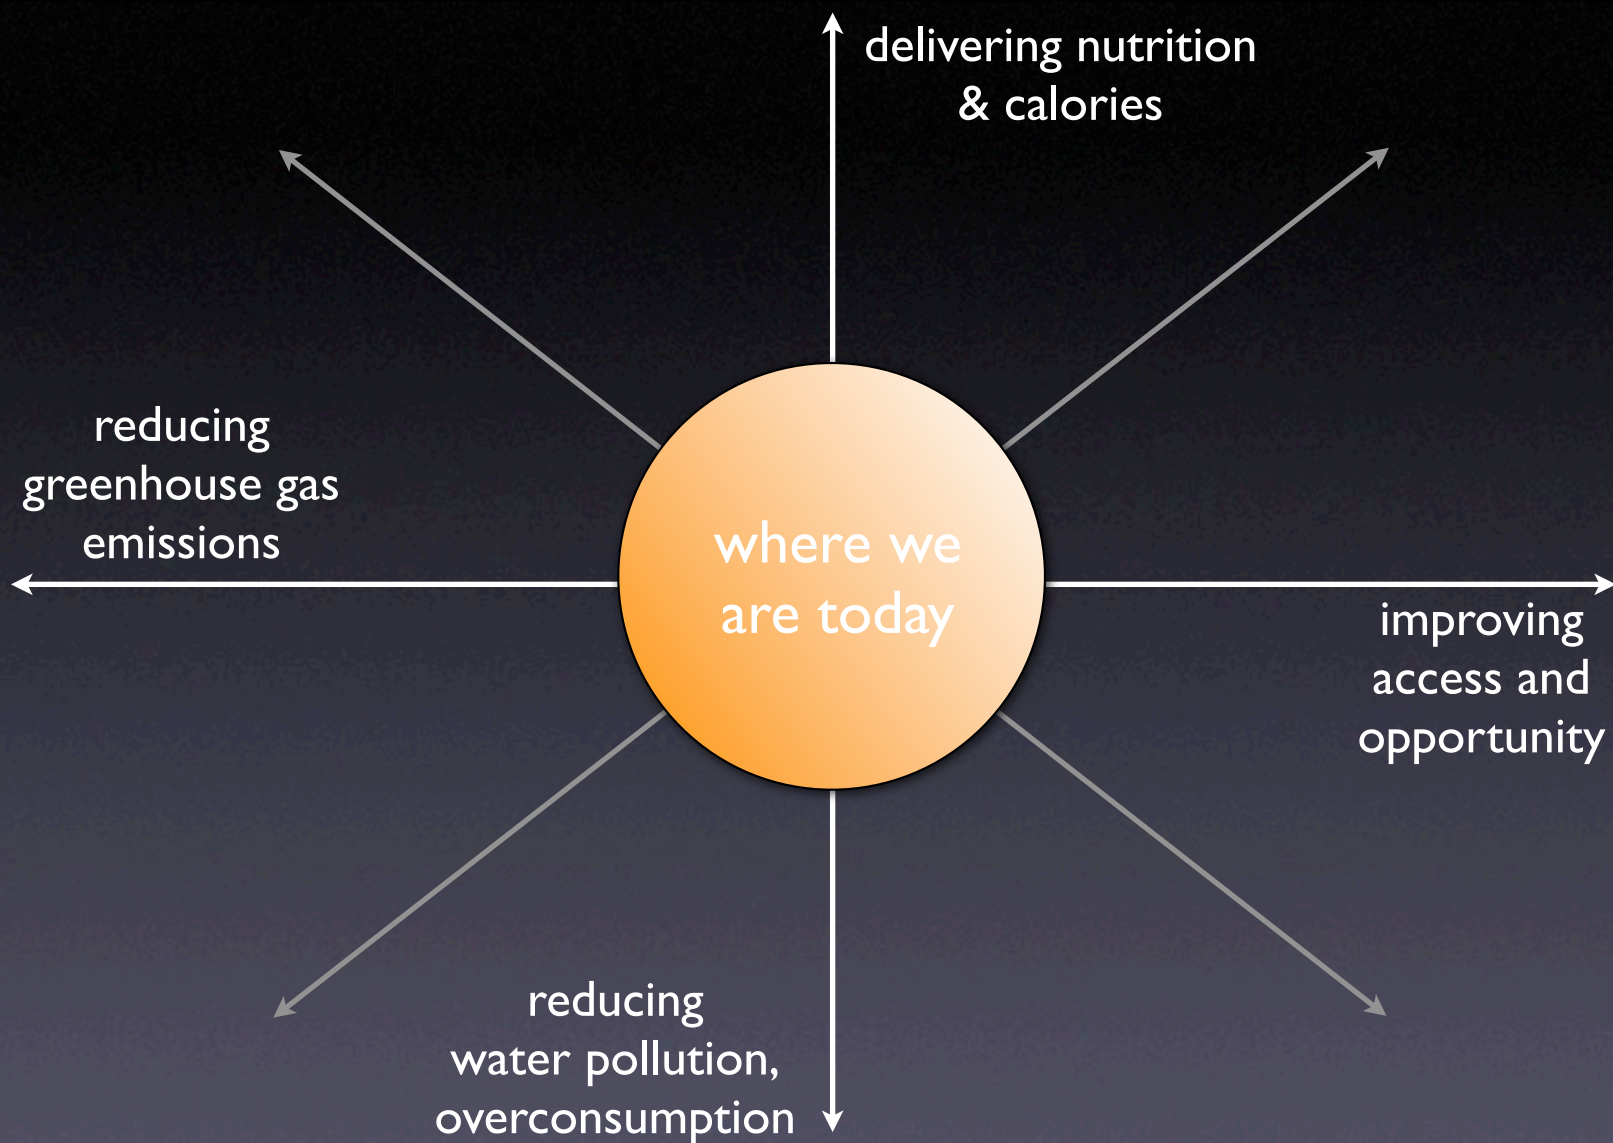

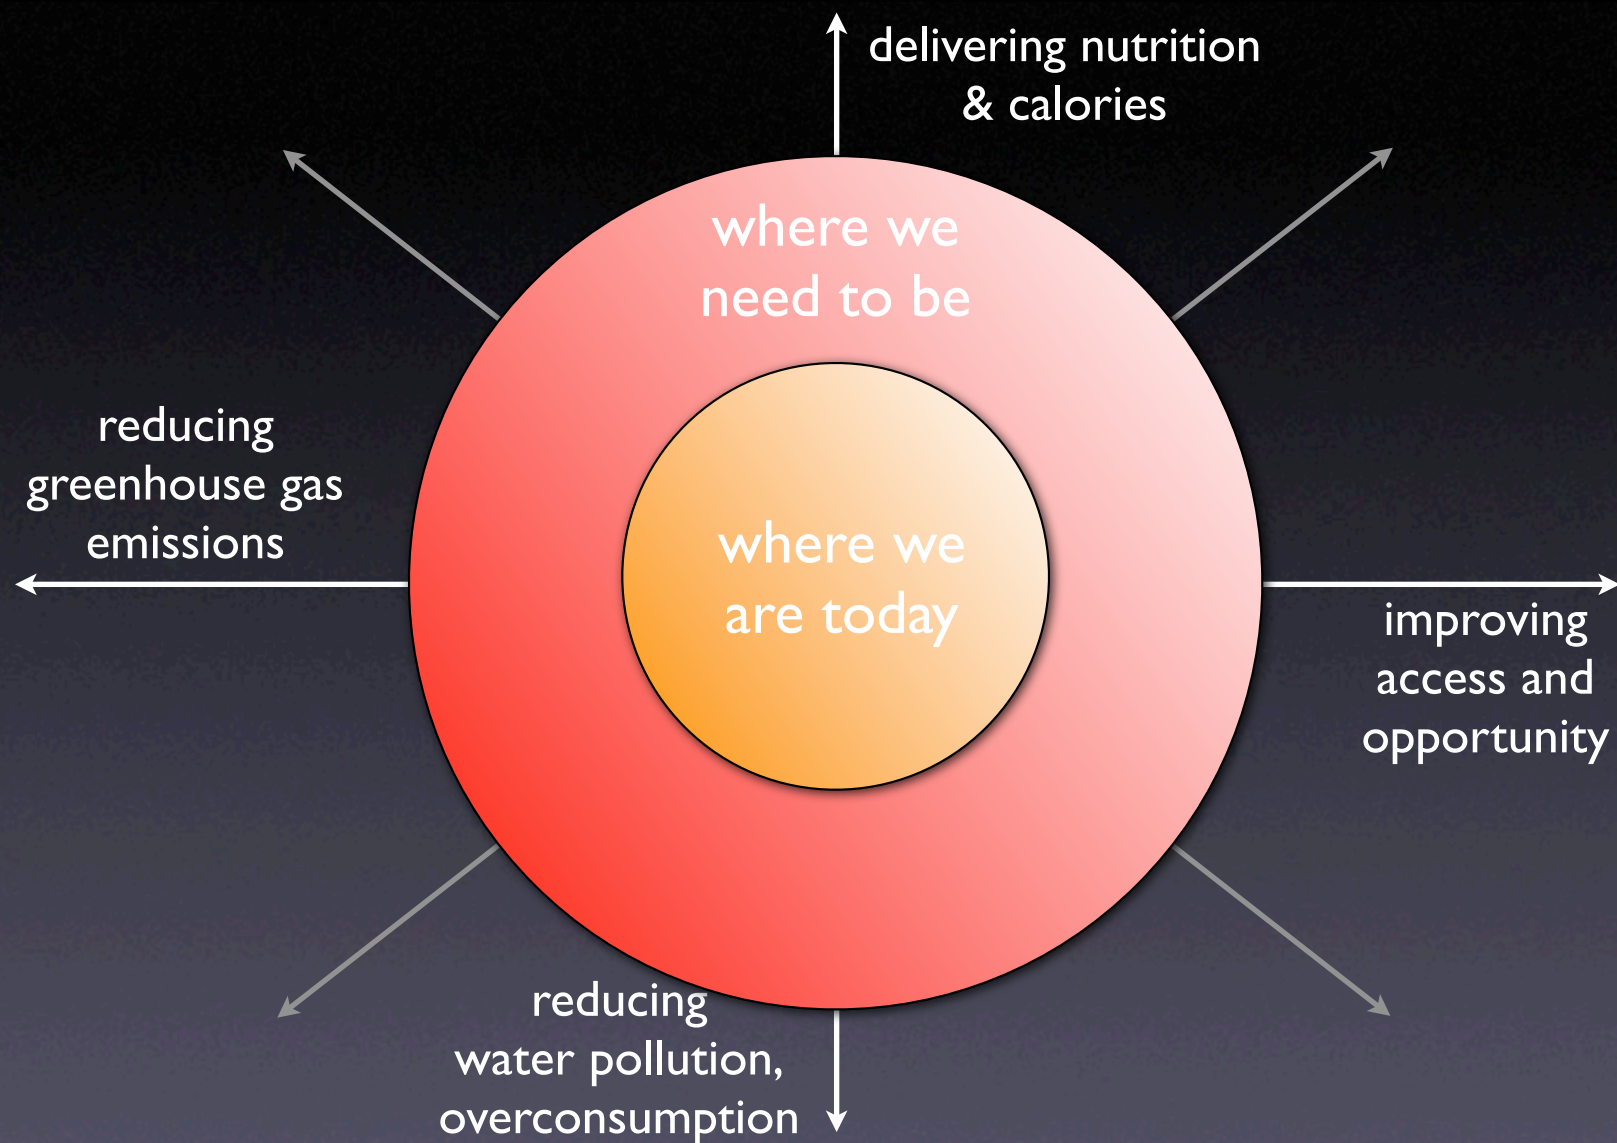

kcal per hectare

Moving Forward

*Freezing Agricultural Footprint*

*Sustainable Intensification*

*Optimize Yield : Water : Nutrients*

*More Efficiency in Food System*
