What is REEport?

- Research, Education, and Extension project online reporting tool
- NIFA's grant and formula project reporting system, building on and replacing the existing CRIS web forms system.
- REEport implements the Research Performance Progress Report (RPPR)

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

Characteristics of REEport?

- Modules such as Project Initiation (which includes classification), Progress Report, Financial Report, and Final Technical Report

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

Steps to Full Deployment

- In development for 2 years
- Beta Testing Started in August 2012
- Training: January – March
- CRIS Blackout began April 15
- REEport Deployed May 2

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

Implementation of REEport

- Non-Formula (including Competitive) Grant Project Initiation
- Linked to Grants database – C-REEMS
 - Pre-population of relevant Project data
- Existing Non-Formula Grants & Project Reporting
- Copying Existing Non-Formula Projects from CRIS to REEport
 - Annual Progress Reports
 - Continuations
 - Final Technical Reports
- Email Notifications and Reminders

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

Implementation of REEport

- Formula Grant Project Initiation & Classification
- Program of Research
- Assurance Statements
- Email Notifications and Reminders
- Link Hatch and Evans-Allen Projects to POW
 - Auto Upload FTEs, Financial Data, KAs & % to Annual Report
- Data Exchange with NIMSS

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

REport Progress Report

- Annual and Final (Termination) Reports
- Must Conform to the Research Project Progress Report (RPPR)
- Standard Report
 - Must be used Government-wide by Extramural Research Granting Agencies
 - Fields and Descriptions of Fields are prescribed
 - Flexibility for NIFA to include extra descriptions

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

NIFA Reporting Portal

- One Place to enter for:
 - REEport
 - Plan of Work
 - Partnership Leadership Management Dashboard
- One User ID and Password for Reporting
- All Users must have a User ID and Password
- Roles
 - Site Administrator, Assistant Site Administrator
 - Project Grantees (PDs), Program Assistants
 - Nation Program Leaders

United States
Department of
Agriculture

National Institute
of Food
and Agriculture

Major goals of the project

The sap-sucking insects (Hemiptera), including aphids and plant bugs, currently present one of the biggest challenges for insect pest management in U.S. agriculture. The soybean aphid alone is estimated to account for \$1.6 billion in losses over the past decade. Management of hemipteran pests relies primarily on the application of environmentally damaging chemical insecticides. Taking advantage of a more sustainable approach, toxins derived from the bacterium, *Bacillus thuringiensis* (Bt), have been used successfully for management of other insect pests, but exhibit only low levels of toxicity against the Hemiptera. The goal of this project is to test a novel approach for generation of hemipteran-active Bt toxins. The objective will be to test the modified toxins for toxicity against the soybean aphid, and to assess the specificity of the modified toxins. The long term goal is to develop aphid resistant transgenic plants for use in U.S. agriculture. The objective of this application is to determine whether specific modification of Cry4Aa will result in an aphicidal toxin that can be used for commercial production of soybean aphid resistant transgenic soybean. This strategy could confer significant benefit to U.S. agriculture through prevention of soybean aphid-mediated losses. Five sets of modified toxins will be generated and tested for stability, aphid gut binding, and toxicity against the soybean aphid. Membrane feeding assays will be used to assess efficacy of the modified toxins against the soybean aphid. Toxins with the greatest toxicity will be tested for specificity against other species of aphid, and against pestiferous and beneficial insects found in soybean, including the honey bee. The potential impact of the modified toxin on non-target pest insects and on beneficial organisms will be an important consideration for the practical use of the modified toxin in transgenic plants. Expected outputs: On completion of this work, we expect to have (i) demonstrated the toxicity of modified Cry4Aa against the soybean aphid, *Aphis glycines*, (ii) constructed modified Cry4Aa with sufficient aphicidal toxicity for use in transgenic soybean for resistance against *A. glycines*, (iii) identified the Cry4Aa domains that interact with the aphid gut, (iv) increased understanding of the mode of action of Cry4Aa against aphids, and (v) established whether toxin modification alters the specificity of Cry4Aa. This work will provide the foundation for sustainable management of the soybean aphid, and application of the same strategy for management of other hemipteran pests.

* What was accomplished under these goals?

Submit for Review

Review in PDF format

Your report is not yet complete.

The following sections must be filled out before submitting - click on each section to complete it:

- Accomplishments is required.
- Actual FTEs for this Reporting Period needs to be entered or the checkbox needs to be checked.
- Changes/Problems needs to be populated or the checkbox needs to be checked.
- What opportunities for training and professional development has the project provided? needs to be populated or the checkbox needs to be checked.
- Other Products needs to be entered or the checkbox needs to be checked
- What do you plan to do during the next reporting period to accomplish the goals? needs to be populated or the checkbox needs to be checked.
- Products needs to be entered or the checkbox needs to be checked
- How have the results been disseminated to communities of interest? needs to be populated or the checkbox needs to be checked.
- Target Audience needs to be populated or the checkbox needs to be checked.

All REEport documents follow this basic workflow: Draft > Submit for Review > Submit to NIFA. If you are submitting for review, be sure to follow through and ensure that your document is submitted to NIFA. Communicate with your REEport Site Administrator as applicable, as you may not have Submit-to-NIFA permissions.
