Crowdsourcing to Address Wicked Problems

Sonny Ramaswamy

National Institute of Food and Agriculture

Societal Challenges that We Take On

- Population
- Food
- Water
- Environment
- Climate Change
- Energy
- Health
- Poverty

- **Convergence:** Merging of technologies, processing disciplines, or devices into a unified whole that **creates** a host of **new pathways** and **opportunities**. It involves the **coming together** of different fields of study—particularly **engineering, physical sciences, and life sciences**—through **collaboration** among research groups and the **integration** of approaches that were **originally** viewed as **distinct** and potentially contradictory.”

Sharp et al. 2011. The Third Revolution: Convergence of the Life Sciences, Physical Sciences, and Engineering. MIT

- **Transdisciplinary:** Engaging with different ways of **knowing** the world, **generating** new **knowledge**, and helping **stakeholders** understand and **incorporate** the results or **lessons** learned by the research.

Wickson et al. 2006. Transdisciplinary research: characteristics, quandaries and quality', Futures, vol. 38, no. 9, pp. 1046–1059.

Human Health Food Technology

Convergence of Nano-Bio-Info-Cognitive Technologies

- The synergistic advances in NBIC knowledge and tools have stimulated new solutions to the challenges in agriculture, food and nutrition, value added products, and the environment.
 - Biotechnology has transformed agricultural production.
 - Nanotechnology has allowed new tools such as rapid gene sequencing.
 - Satellite imaging provides meg-data and trends of crops, animals, land, water, weather, etc. for precision agricultural production.
 - Service robots perform sophisticated and precise tasks in the difficult environment for agriculture field workers.
- Future programs and policies to encourage the convergence-divergence evolution process to enhance creativity, invention, and innovation.

NIFA's Role

- Support **transdisciplinary** approaches – **User Inspired**
- **Fund** innovations in the realm of convergence
 - Disciplines of biology, chemistry, nanotechnology, robotics, engineering, computational science, social sciences, others
- **Identify** opportunities for convergence
 - Science to address societal challenges
 - Structures to facilitate transdisciplinary interactions
- **Evaluate** if convergence is occurring
 - Supporting culture, environment, structures, opportunities

NIFA Budget

Proposed FY2015: \$1.5 B

Research & Education: \$842,773,000

Extension: \$468,968,000

Integrated: \$28,821,000

Mandatory & Endowment: \$159,880,000

FY2014 AFRI: \$316,000,000

Challenge Areas: \$154,437,748

Foundational Areas: \$102,436,928

Interagency Collaborations: \$27,500,000

Education: \$7,316,923

Admin & Other: \$23,732,062

Labels: Top 3 Topic Words

Convergence: Plant Production

- Use of Unmanned Aerial Vehicles (UAVs) to understand movement of high-risk plant pathogens in the lower atmosphere (Virginia Polytechnic)
 - **Engineering** coupled with **population genetics** techniques to test hypotheses concerning the origin, distribution, and spread of populations of fungal plant pathogen, *Gibberella zeae*, in the planetary boundary layer

Convergence: Climate Change

- Useful to Usable (U2U): Transforming Climate Variability and Change Information for Cereal Crop Producers (Purdue University)
 - To enhance usability and up-take of climate-based information and resources that will lead to more profitable agricultural systems
 - Includes social scientists, sociologists, economists, climatologists, atmospheric scientist, crop and climate modelers, and information technology specialists; team members also include evaluation, extension, and communication specialists

Convergence: Water/Watershed Conservation

- Cropland Watershed CEAP Synthesis: Transforming Knowledge for Evaluating Impacts of Conservation Practices on Water Quality, Improving Management of Ag Landscapes (NC State and 15 other institutions):
 - Over 150 years of watershed and water quality (WQ) experience, with specialties in **WQ monitoring, agronomy, soil science, biological and ag engineering, rural sociology, economics, statistics, and modeling.**
 - Assess and plan conservation practices at the watershed scale for better WQ outcomes; identify pollutants of concern and sources before selecting practices; prioritize practices in critical areas; select and apply practices effective for pollutants of concern; adoptable and maintained; keep track of practices for assessment, treatment needs; and establish monitoring protocols specifically for WQ changes from practices.

Convergence: Animal Health

- Nanowire switch and nanoelectrode/nanochannel based impedance biosensor for rapid screening of avian influenza virus (University of Arkansas)
 - **Transdisciplinary** efforts (chemistry, virology, mechanical and biological engineering) integrate nanotechnologies with microanalytical devices to develop an innovative nano-biosensor for in-field rapid screening of avian influenza virus infection in poultry
- Ecology and Evolution of Infectious Diseases (US-UK collaboration)
 - **Convergence** of biologic/life sciences and computational science to develop models to predict disease transmission

Convergence: Food Safety

- Engineering methods to improve safety of commercially produced food products (Michigan State University)
 - Work at the **transdisciplinary interface** between predictive **food microbiology** and **food process engineering** to optimize data/tools and improve integration of microbial models into engineering models for food handling, storage, processing, distribution and into risk models.

Convergence: Food Technology

- Novel microwave-assisted pasteurization system (MAPS) that can semi-continuously process pre-packaged chilled meals (Washington State University)
 - Transdisciplinary approach involving engineering, microbiology, virology, chemistry, sensory science, mathematic modeling and computer simulation, regulatory risk assessment, and social science (performance evaluation) makes the technology readily available for commercial uses in three years.
 - Collaborative team of academia, government laboratories (USDA/ARS, US Army Natick) and regulatory agencies (FDA, USDA/FSIS) and industrial partners.

Convergence: Plant Pathology

- Developing new methods of sustainable management of soybean root and stem rot
 - Work at the **transdisciplinary interface** incorporating **field-based molecular diagnostics, plant and microbial molecular biology, genomics, bioinformatics, plant breeding, economics and market analysis** to optimize durability of novel disease management methods, increase the probability of market acceptance and improve the long-term sustainability of soybean production.

Convergence: Farm(er) Safety

- AgrAbility: Assistive Technology Program for Farmers with Disabilities
 - To increase the likelihood that farmers, ranchers, and farm family members with disabilities will remain engaged in and succeed in agricultural production.
 - Convergence of human health, social work, and agricultural engineering to enhance quality of life. Teams also include family life specialists, farm safety extension educators, communications specialists and evaluation experts.

Convergence: Agricultural Systems

- Neuroeconomics of controversial food technologies (Oklahoma State University)
 - **Medical imaging** techniques coupled with **social science**: functional magnetic resonance imaging (fMRI) brain scanning while consumers engage in the perception, appraisal, evaluation, and choice of food products
- Computational Agriculture Initiative (Cornell University)
 - Collaborative effort between the Cornell Theory Center (CTC), a **high-performance computing** (HPC) and interdisciplinary research center, and the **College of Agriculture and Life Sciences** (CALS) to develop and coordinate a program on the application of high-performance computing (HPC) to agricultural problems

Convergence: Connecting Hubs and Nodes

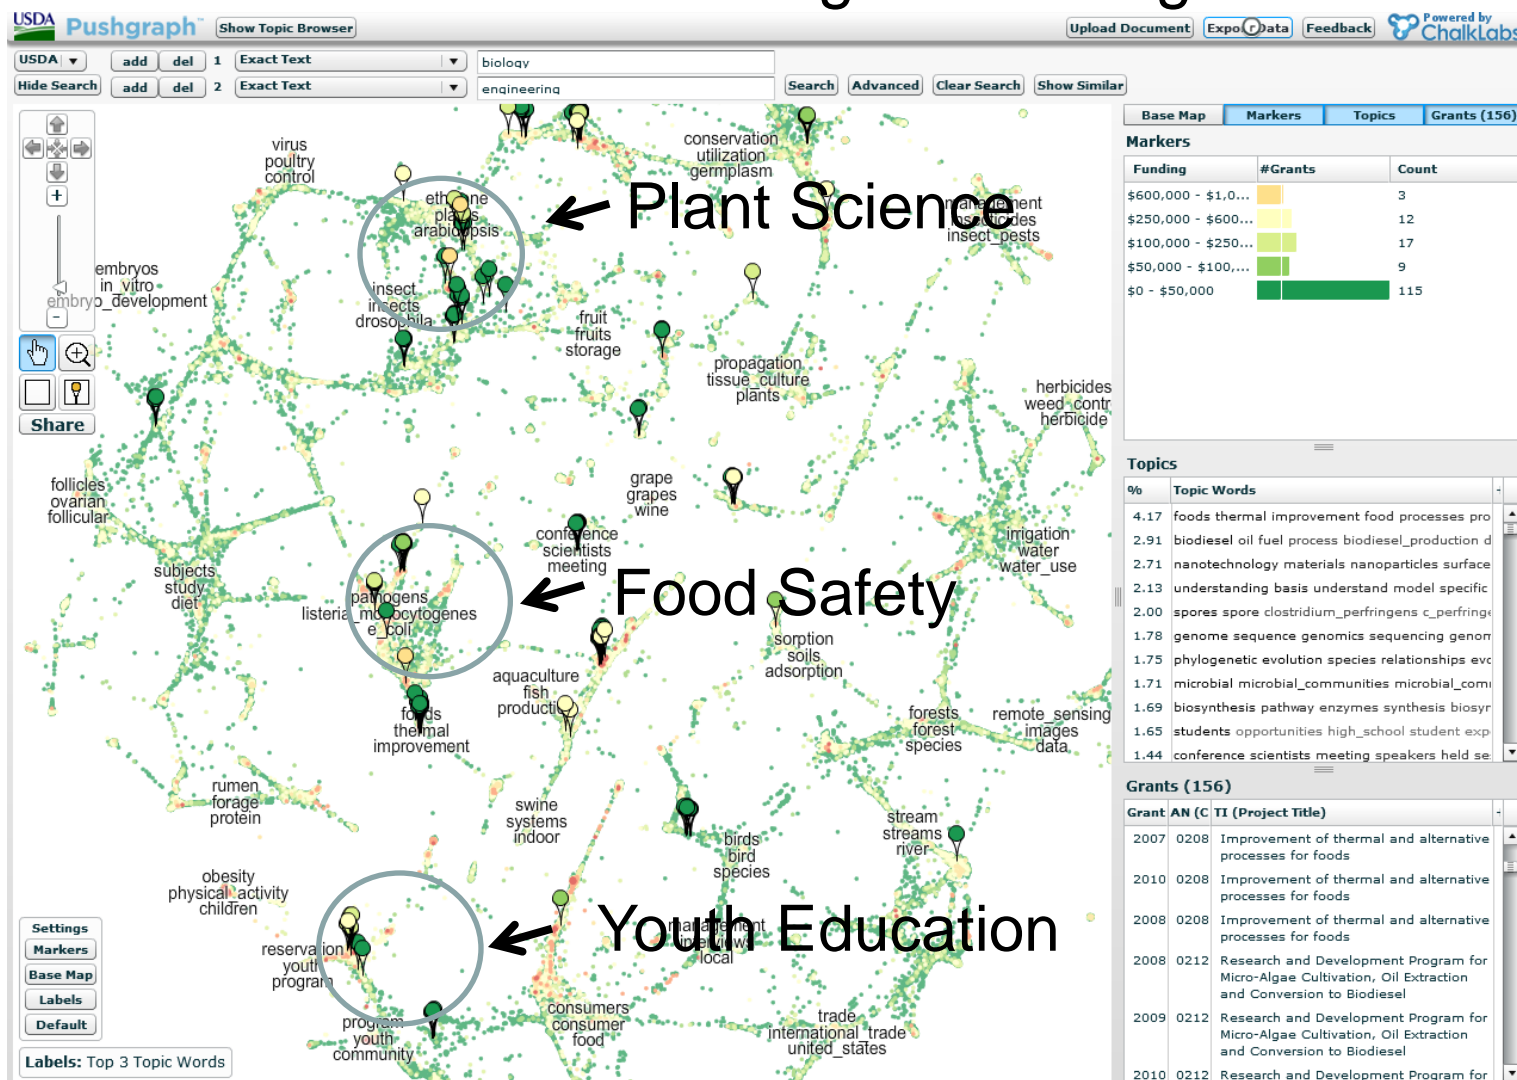

Convergence: Education

- Multidisciplinary Doctoral Education Program in Lignocellulosic Biofuels Science and Engineering (North Carolina State University)
 - Education program for a **new generation** of researchers who understand the entire spectrum of biofuels **science and engineering: biochemistry** and **genetics** (to understand feedstock modification), **chemistry** and **chemical engineering** (to design pretreatment processes), **molecular biology** (to understand enzymatic hydrolysis and fermentation), and **life-cycle analysis** (to understand effects on the environment).
 - To address **disciplinary disconnects** that are obstacles to this rapidly growing area.

Identifying Fertile Ground: Convergence of Computational Science and NIFA Program Management

How Will We Know It's Working?

1995-97 Before Bio-X

2005-07 After Bio-X

- Network of faculty interactions at Stanford's Bio-X before and after the interdisciplinary convergence institute

- Network of NIFA-funded animal science researchers today and ??????

Challenges and Opportunities for NIFA

- Challenge: Maintain **balance** between fostering **transdisciplinary** research and maintaining robust **disciplinary** research
 - Opportunity: Include a convergence option in AFRI Foundational Research Program
 - Develop a “prize” program for convergence approaches
- Challenge: Provide opportunities to **interact** formally and informally
 - Opportunity: Focus annual **project director meetings** on **convergence**, encourage teams of researchers
- Challenge: Identify potential areas for **convergence cultivation** and **evaluation**
 - Opportunity: Fully **develop computational science management tools** to help elucidate where convergence could have greatest impacts to resolve societal challenges

Demise of Disciplinary Science?

- “Convergence may *spell the end* of the existing *organization of scientific fields*. It, in fact, *challenges the traditional disciplinary structure* we are so comfortable with ...and convergence will *"threaten the hell"* out of this structure, and its attendant funding mechanisms and departmental divisions. (Convergence) marks *"the demise of disciplinary science."*

Alan Leshner, chief executive officer of the AAAS, in:
