

Integrated Analysis:

Models for Supporting
Sustainability Decision Making

Integrated Assessment

- What progress has been made in developing models to support decisions related to sustainability
- What are the remaining gaps and critical barriers to progress?
- What new efforts are needed to address opportunities related to sustainability?

1 NO
POVERTY

2 ZERO
HUNGER

3 GOOD HEALTH
AND WELL-BEING

4 QUALITY
EDUCATION

5 GENDER
EQUALITY

6 CLEAN WATER
AND SANITATION

7 AFFORDABLE AND
CLEAN ENERGY

8 DECENT WORK AND
ECONOMIC GROWTH

9 INDUSTRY, INNOVATION
AND INFRASTRUCTURE

10 REDUCED

15 LIFE
ON LAND

16 PEACE AND JUSTICE
STRONG INSTITUTIONS

17 PARTNERSHIPS
FOR THE GOALS

IAM History

- Acid rain
- IPCC
- Millennium Ecosystem Assessment
- InVEST & other ecosystem service models
 - Work with stakeholders and decision makers
 - More fully integrating ecology
- Models of specific thematic areas (food-water-energy nexus)
- Madingley model

IAM Progress: Synthesis

- More robust, rigorous, models
- More integrated, with more feedbacks
 - From climate to climate and economics to climate, economics, and some ecology
- More use of these models
- More regional assessments and regional models

Remaining Gaps

- Still not regularly used for decision-making
- Limited focus and topics
 - Effect of single interventions, single focus
 - Where's the ecology?
 - Social systems entirely non-evident (except economics)
- Feedbacks are still rare, and limited in the action within models
 - Economy and climate, but few ecological feedbacks
- Do they work? Are they right?
- Scale
- Risk and uncertainty

New Efforts Needed: Move towards wellbeing

- Co-design, co-production
- Test the models, assess the assessments
- Critical linkages and feedbacks
- More integrated, highly flexible models
- Better thinking about positive futures and how to transition towards them

Human well-being as the target outcome

- To understand well-being, not just climate and food, but multiple ecosystem services
 - Multiple forms of capital, but are they substitutable? When? How does this impact resilience and sustainability of production?
- Not just production of multiple services, but distribution of services to people
- Not just distribution of ES, but how people's lives are affected

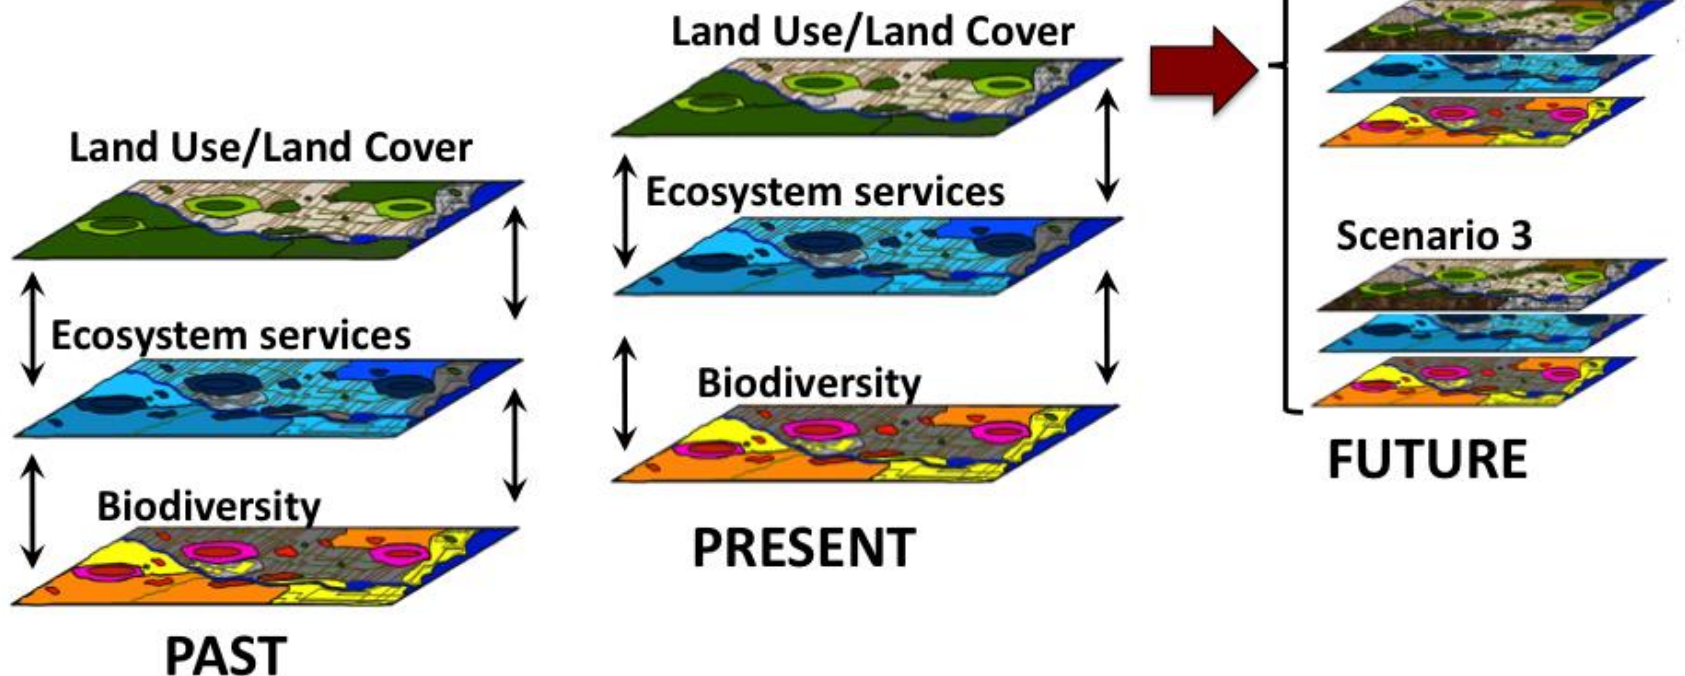

Co-design, co-production

Scenario 2

Critical linkages and feedbacks
in more integrated, highly
flexible, dynamic models

Better thinking about futures

Stories are powerful things: they create our reality as much as they explain it.

Seeds of a Good Anthropocene

Pockets of a better future
that are already in existence today

Why “Good” Anthropocene(s)?

Issues not well represented in existing narratives:

- Cultural diversity (e.g. non-state movements)
- Resilience (of nature & people)
- Political economy (colonialism, conflict, etc)
- Cities (different types of urbanization)
- World views (especially about nature)
- Trust (in other people, institutions)
- Hope, Fun, etc...

Why seeds?

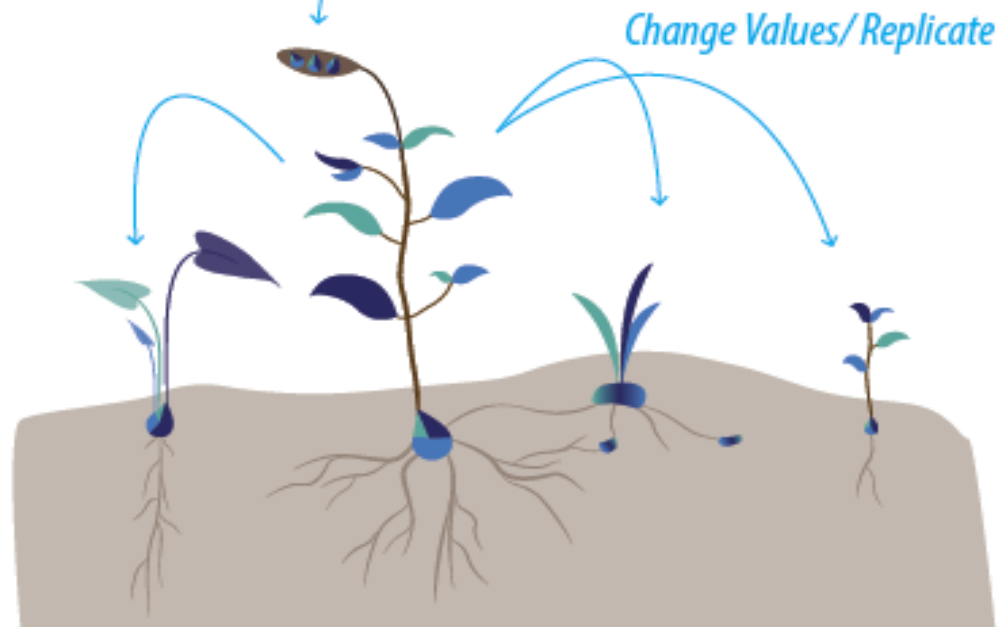

Seed Growth

Scale Up/Out

What's next for IAMs?

- More regional models, more scaling
- Co-design, co-production
- Test the models, assess the assessments
- Critical linkages and feedbacks
- More integrated, highly flexible models
- Better thinking about positive futures and how to transition towards them
