# mHealth for TB-Tobacco: An approach to reduce tobacco use among TB patients

**Rationale for mHealth-TB Tobacco control**

# mHealth for TB-Tobacco

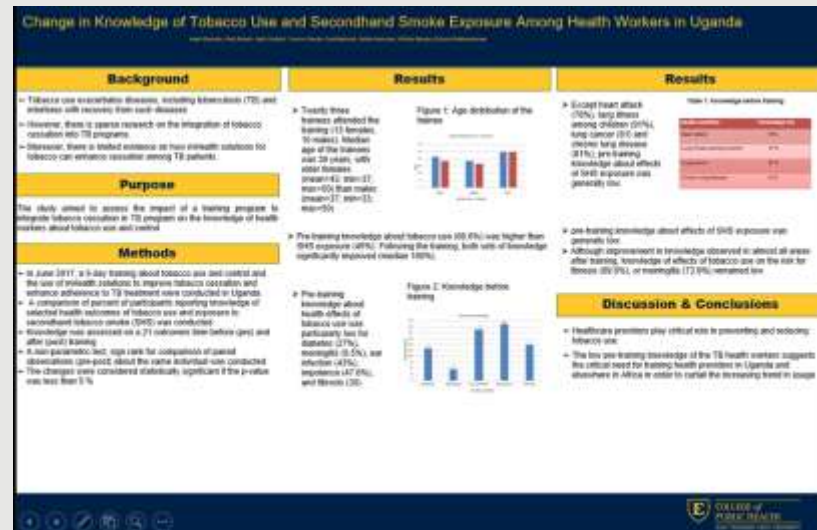

# mHealth for TB-Tobacco

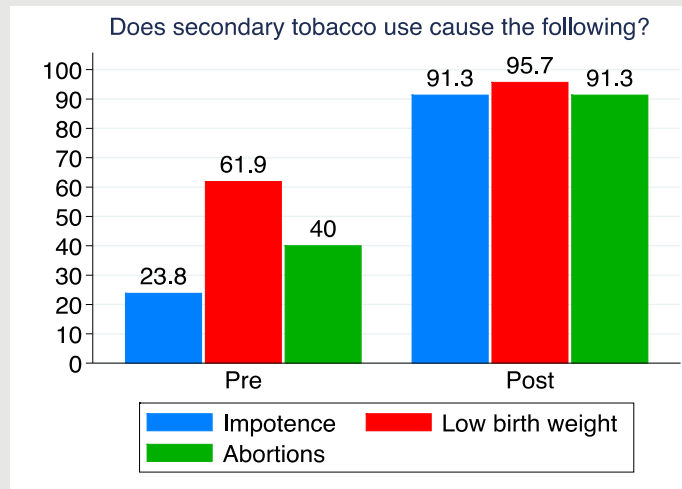

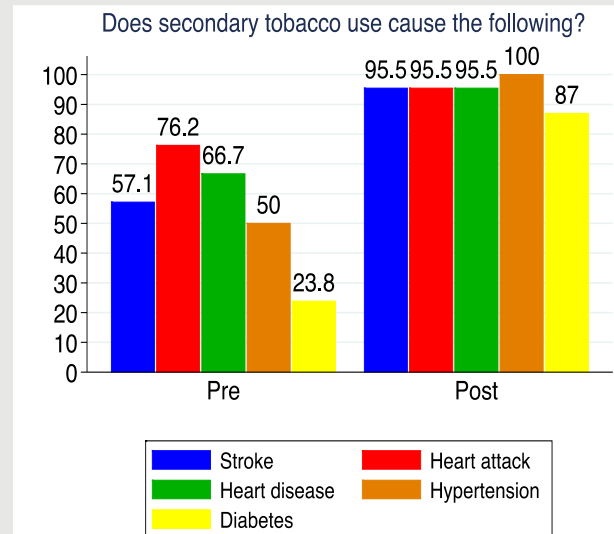

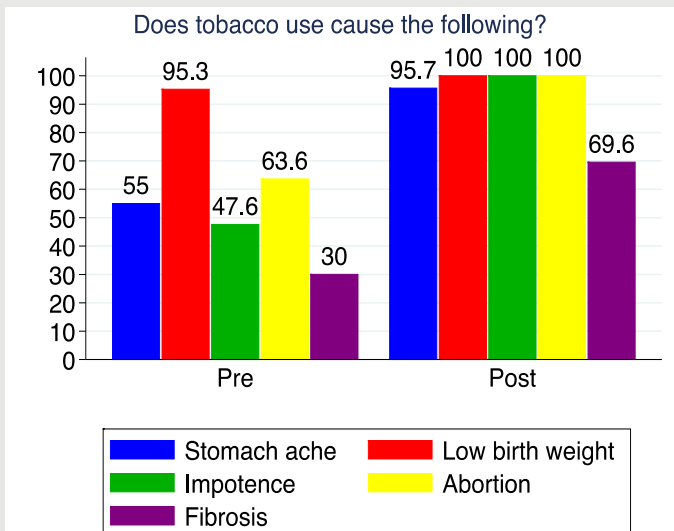

HW training on:

- 1) TB-Tobacco integration
- 2) Effects of tobacco use
- 3) Effects of second hand smoking
- 4) Tobacco addiction
- 5) Counselling on tobacco cessation
- 6) mHealth approach in tobacco cessation
- 7) How tobacco is used

A poster presentation titled **Change in Knowledge of Tobacco Use and Secondhand Smoke Exposure Among Health Workers in Uganda** was made at the 17<sup>th</sup> World Conference on Tobacco or Health (WCTOH) in March 2018

## Top next steps for your project:

- Refresher training for the health workers and training the lab persons for the cotinine tests
- Pilot the SMS messaging, roll it out and do support supervision
- Conduct data collection, management and analysis

## How data and results from your project will impact stakeholder decisions and the development problem:

- Training of health workers in tobacco cessation
- Integration of tobacco-cessation in TB control
- Incorporating mHealth mechanisms in TB management

## Challenges you have faced in collecting meaningful data:

- Need to solicit mHealth management technologies from outside the country
- Need to procure cotinine tests from outside the country
