## Chinese Civil Space Activities ( ref. 2001 White Paper)

1. Space Technology
2. Space Applications
3. Space Science

### Space Science

Strategic Priority Program  
on Space Science  
( 2011-2017 )

DARk Matter Particle Explorer  
(DAMPE)

ShiJian-10  
(SJ-10)

QUantum Experiments at Space Scale  
(QUESS)

Hard X-ray Modulation Telescope  
(HXMT)

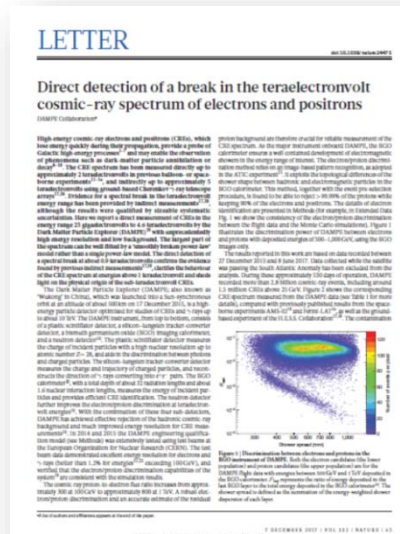

# 1. DArk Matter Particle Explorer (DAMPE)

- Science Objectives
  - Find and study dark matter particle through high-resolution observation of high energy electron, gamma-ray spectrum and its space distribution
  - Study the origin of cosmic ray through observation of high energy electron spectrum and anisotropy above TeV
  - Study the propagation and acceleration mechanism of cosmic ray through the observation of its heavy ion spectra
- Launch: Dec. 17, 2015

悟空 / Monkey King  
 悟 : understanding  
 空 : space

- Direct detection of a break in the teraelectronvolt cosmic-ray spectrum of electrons and positrons
- Up to Jun. 2017, 3.3 billion high-energy particle has been detected, covering the whole sky for three times

J.Chang et al,  
*Astroparticle Physics*,  
P6-24, VOL 95, Jun.  
24, 2017

DAMPE Collaboration,  
*NATURE*, P63-66, VOL 552,  
Dec.7, 2017

- Red dashed line: a smoothly broken power-law model that best fits the DAMPE data in the range 55 GeV to 2.63 TeV ;
- AMS-0214 and Fermi-LAT16 : direct measurements ; H.E.S.S. : indirect measurement

## 2. Recoverable Satellite for Microgravity and Space Life Sciences (SJ-10)

- SJ-10, the 24th recoverable satellite of China, provides a mission of **19 space microgravity experiments**, selected from more than 200 applications
- Scientific Objectives
  - The basic laws of motion for matter
  - High performance material preparation
  - Mechanism of combustion
  - Biological effects of gravity or space radiation, and space biotechnology
- Launch: mission carried from April 6-18, 2016

## Mammal embryos developed in space for the first time

Two-cell mouse embryos, four hours before launch

Mouse embryos that developed into blastocyst 80 hours after the launch

15 experiments were carried out for the first time

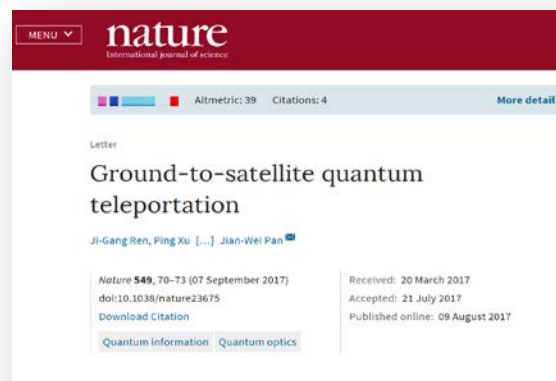

# 3. QUantum Experiments at Space Scale (QUESS)

- Science Objectives
  - Implementation of long-distance quantum communication network based on high-speed quantum key distribution(QKD) between satellite and the ground station, to achieve major breakthroughs in the realization of space-based practical quantum communication
  - Quantum entanglement distribution and quantum teleportation on space scale, fundamental tests of the laws of quantum mechanics on global scale
- Launch: Aug. 16, 2016

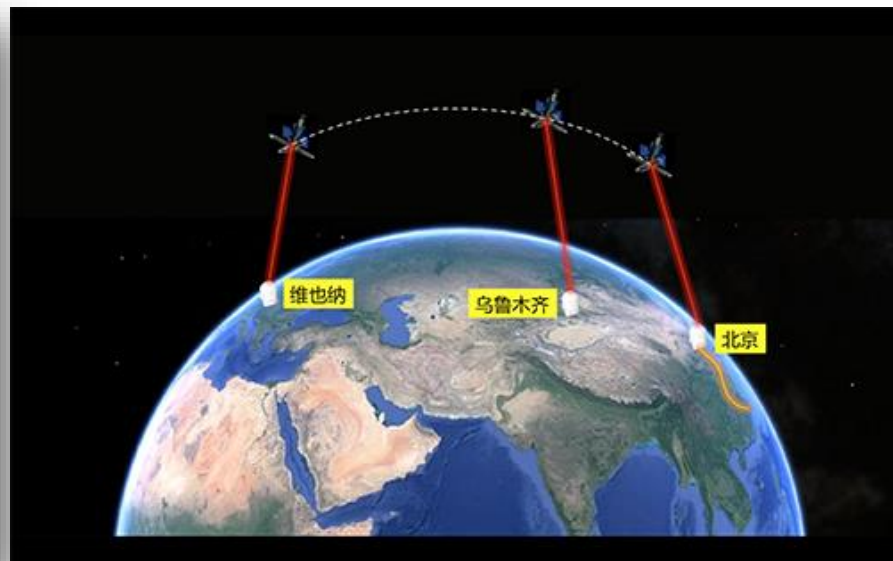

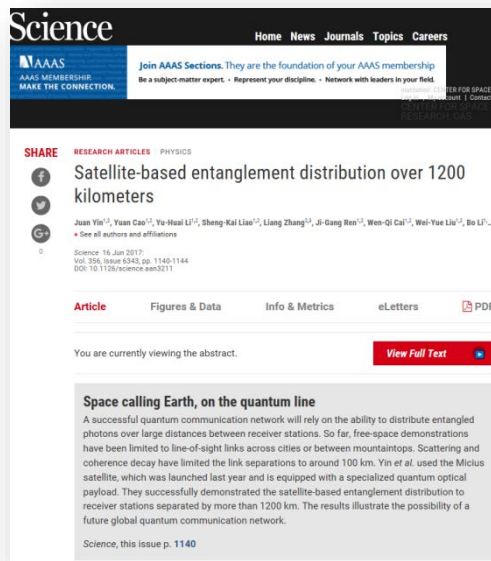

Micius/Mozi  
from ~BC 468 to ~BC 376

- Satellite-to-ground quantum key distribution was accomplished for the first time.
- Ground-to-satellite quantum teleportation was accomplished for the first time.

- Satellite-ground and ground-satellite entanglement distribution over 1200 kilometers was accomplished for the first time
- Intercontinental quantum communication was for the first time accomplished between China and Austria

# 4. Hard X-ray Modulation Telescope (HXMT)

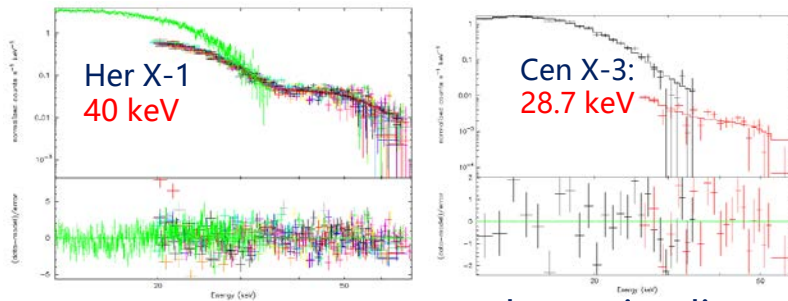

- Science Objectives
  - Galactic plane scan and monitor survey for more weak & short transient sources in very wide energy band (1-250 keV)
  - Pointed observations: High statistics study of bright sources and Long-term high cadence monitoring of XRB outbursts
  - Multi-wavelength Observations with other telescopes
  - GRBs and GW EM, FRB, etc.
- Launch : Jun. 15, 2017

慧眼 - HXMT

Neutron star cyclotron absorption lines

More than 40 Gamma-Ray Bursts are detected

QPO( $\sim 2.62$  Hz)

Quasi-Periodical Oscillations of black hole binary MAXI J1535-571

Monitored the entire GW170817 localization area and especially the optical counterpart (SSS17a/AT2017gfo) with very large collection area ( $\sim 1000$  cm<sup>2</sup>) and microsecond time resolution in 0.2-5 MeV

ApJ Letter

Science China

# Table of Contents

- Current Missions 2011-2017
- ▣ New Missions in Preparation for 2018-2022
- Final Remarks

# New Missions 2018-2022

Einstein Probe (EP)

Advanced Space-borne Solar Observatory (ASO-S)

Solar wind Magnetosphere Ionosphere Link Explorer (SMILE)

enhanced X-ray Timing and Polarimetry mission (eXTP)

Gravitational wave high-energy Electromagnetic Counterpart All-sky Monitor (GECAM)

Water Cycle Observation Mission (WCOM)

Magnetosphere-Ionosphere/Thermosphere Coupling Exploration (MIT)

Five science satellites would be developed during the 13<sup>th</sup> Five-Year Plan, issued by CAS in Dec. 1, 2016

Strategic Priority Program on Space Science (Second Phase) was officially approved in Dec. 20, 2017

# 1. Einstein Probe (EP)

- EP is an explorer-class mission
  - Dedicated to time-domain astronomy
  - For all-sky monitoring to discover and study high-energy transients and variability in the soft X-ray band
- Science Objectives
  - Carry out systematic survey of soft X-ray transients and variability of X-ray sources at unprecedented sensitivity and high cadence
  - Discover otherwise quiescent **Black holes** at all astrophysical mass scales and other compact objects by capturing their transient flares
  - Detect and localize the electromagnetic-wave sources of **gravitational-wave** events by synergy with gravitational-wave detectors

- Payloads

- Wide-field X-ray Telescope (WXT)

- X-ray optics: lobster-eye MPO; FoV~ 3600 square degrees
    - Detector: CMOS array

- Follow-up X-ray Telescope (FXT)

- X-ray optics: Wolter-1 type; FoV ~ 38 arcmin
    - Detector: CCD

- Features

- Large Field of View **3600 sq. deg.**; grasp: **~10,000 deg<sup>2</sup>.cm<sup>2</sup>**
- Monitoring: soft X-ray band: **0.5-5keV**
- Sensitivity: > 1 order of magnitude higher than those in orbit
- Good angular resolution (**~5 arcmin**) and positioning accuracy (**<1 arcmin**)
- Autonomous follow-up (<10 arcsec localisation; 0.3-10keV)
- Fast alert data downlink and (possible) fast uplink (ToO)

# Schedule & Potential partners

- Schedule

- Approved and fully funded in Dec. 2017
- Engineering implementation started in Sept. 2017
- Currently in Phase B
- Planned launch: the end of 2022

- Potential Partners

- Max-Planck-Institut. for extraterrestrial Physics, Germany
  - FXT CCD detector
- CNES, France
  - VHF network
- University of Leicester, UK
  - Optics, testing, etc.
- ESA (under discussion)
  - FXT mirror, etc.

## 2. Advanced Space-borne Solar Observatory (ASO-S)

- Science Objectives
  - To study solar magnetic field, solar flares, CMEs, their physical formations, mutual interactions, and close connections

- Payloads
  - Full-Disc Vector Magnetograph (FMG): solar magnetic field
  - Hard X-ray Imager (HXI): solar flare
  - Lyman-alpha Solar Telescope (LST): CME

- Orbit: solar synchronous
- Attitude: 720 km
- Attitude Control: 3-axis stabilizatic
- Pointing accuracy:  $0.01^\circ$
- Stability:  $0.0005^\circ/\text{s}$  ( $1\text{-}2''/20\text{s}$ )
- Payload Mass:  $<335\text{ kg}$
- Payload power:  $300\text{ W}$
- Data downlink:  $492\text{ GB/day}$
- Eclipse time:  
 $<18\text{min/day}$  during eclipse season

- The idea was proposed in 2010 or earlier, a partial heritage from SMESE
- A conceptual study was granted by CAS and NNSFC (Oct. , 2011-Mar., 2013)
- Intensive Study (so-called background phase) was undertaken from Jan., 2014 to Apr., 2016, jointly supported by CAS and NNSFC
- Intensive Study (extended): May 2016-Nov. 2016

# 3. Solar wind Magnetosphere Ionosphere Link Explorer (SMILE)

- Science Objectives
  - Determine when and where transient and steady magnetopause reconnection dominates
  - Define the substorm cycle, including timing and flux transfer amplitudes
  - Define the development of CME-driven storms, including whether they are sequences of substorms
- Scientific Significance
  - Expected to carry out global imaging of the interaction between solar wind and magnetosphere **for the first time**, with the new soft X-ray Imager and ultra-violet imager
  - **A new milestone** of geospace exploration, enabling the great leaps from the local to the global detection

- Soft X-ray Imager (SXI)
- Ultra-Violet Imager (UVI)
- Light Ion Analyzer (LIA)
- MAGnetometer (MAG)

SXI

UVI

LIA

MAG

The payload and satellite will be provided by scientists and industry from both Europe and China

- **Orbit** : 5000km@perigee  
19 RE@apogee
- **Mass (PLM+SVM+PM):**  
<2000kg
- **Planned Launch:** ~2022
- **Lifetime** : 3 years

## 4. enhanced X-ray Timing and Polarimetry mission(eXTP)

- Overview
  - The X-ray Timing and Polarization (XTP) was proposed in 2007 , and merged with the European LOFT mission and became the enhanced X-ray Timing and Polarimetry mission (eXTP) aiming for a launch in 2025
  - ~ 4.5 ton , Low equatorial orbit (550 km)
- Science objectives
  - Observe black holes, neutron stars, and magnetars to understand the physics in extreme gravity, magnetism and density
    - Singularity
    - Stars
    - Extremes

- Short focal length telescope array
- Low energy X-ray polarimetry and imaging
- Deployable large area collimated detector array

(Europe lead)

(China Lead)

大面积X射线准直望远镜

Large Area Detector, LAD\*40

偏振测量X射线聚焦望远镜阵列

Polarimeter Focusing Array, PFA\*2

广角监视器

Wide Field Monitor, WFM\*3

能谱测量X射线聚焦望远镜阵列

Spectroscopic Focusing Array, SFA\*11

(Europe Lead)

(China Lead)

# Potential European Participants

## 5. Gravitational wave high-energy Electromagnetic Counterpart All-sky Monitor(GECAM)

- Core Science: GW ElectroMagnetic counterpart (GWEM)

- Independent confirmation of GW event
- Accurate localization, host galaxy, redshift
- Astrophysical content of the GW source
- GW+EM, Cosmology, fundamental physics

# Mission Profile

- Features
  - FOV : 100% all-sky
  - Sensitivity :  $\sim 2 \times 10^{-8}$  erg/cm<sup>2</sup>/s
  - Localization :  $\sim 1$  deg (1-sigma, stat.)
  - Energy band : 6 keV – 5 MeV
- Planned to launch in the 2021
- Joint observation with LIGO & Virgo when they reach best sensitivity

## 6. Water Cycle Observation Mission(WCOM)

- Science Objectives
  - Understand better status and process of the Earth's water cycle system under the global change environment, by simultaneous and fast measurement of a set of water cycle key parameters (soil moisture, ocean salinity, ocean surface evaporation, snow water equivalent, frozen/thaw, atmospheric vapor...)

- Features
  - Orbit: 600km , 97.79°
  - Mass: 1050kg , 450kg (P/L)
  - Lifetime: 3-5 years
- Payloads
  - Interferometric Microwave Imager (IMI)
  - Dual-frequency Polarized microwave Scatterometer (DPS)
  - Polarimetric Microwave Imager (PMI)

IMI

DPS

PMI

## 7. Magnetosphere-Ionosphere/Thermosphere Coupling Exploration (MIT)

- Scientific Objectives
  - Understanding the mechanism of ion acceleration and transport in ionosphere / thermosphere
  - Unveil the role of the coupling of the earth's spheres in triggering the space storm
  - Discover the escape process of the earth particles and deepening the understanding of the evolution of the planetary atmosphere

- Features

| Spacecraft  | ITA    | ITB    | MA  | MB  |
|-------------|--------|--------|-----|-----|
| Inclination | 90°    | 90°    | 90° | 90° |
| Perigee     | 500km  | 500km  | 1Re | 1Re |
| Apogee      | 1500km | 1500km | 7Re | 7Re |

- Payloads

# Table of Contents

- Current Missions 2011-2017
- New Missions in Preparation for 2018-2022
- Final Remarks

- The breakthroughs in fundamental science has the character of great significance. China should also make contribution to human civilization through space science.
- A new chapter of Chinese space endeavor has been opened, with the implementation of Strategic Priority Program on Space Science. Chinese government puts a high value on space science and will continuously develop its science-satellite-series.
- We are open to International cooperation and welcome to join us.

Thanks  
for Your Attention.
