

Science and Technology Policy for Astronomers

Ashlee N. Wilkins, PhD

AAS Bahcall Public Policy Fellow

@AAS_Policy

Astro2020 Early Career Focus Session

October 8, 2018

- 1. Framing:** Science Policy in general, and in astronomy
- 2. How it works:** Federal (science) budget process
- 3. Where we are:** Funding, legislation, and major issues in astronomy policy right now
- 4. What you can do:** opportunities for astronomers to get (more) engaged in astronomy policy

Framing: Science Policy in general, and in astronomy

Science and Technology Policy: What is it?

Can have a continuous interaction
between the two (e.g., climate science).

Policy for Science

Government and institutional policies, strategies, and resources that **impact the conduct and practice** of scientific research and the systematic pursuit of knowledge.

vs.

Science for Policy

Scientific methods, findings, and knowledge that **inform and enhance** the development and implementation of government and institutional policies, regulations, and programs.

Astronomy mostly lives on this side...

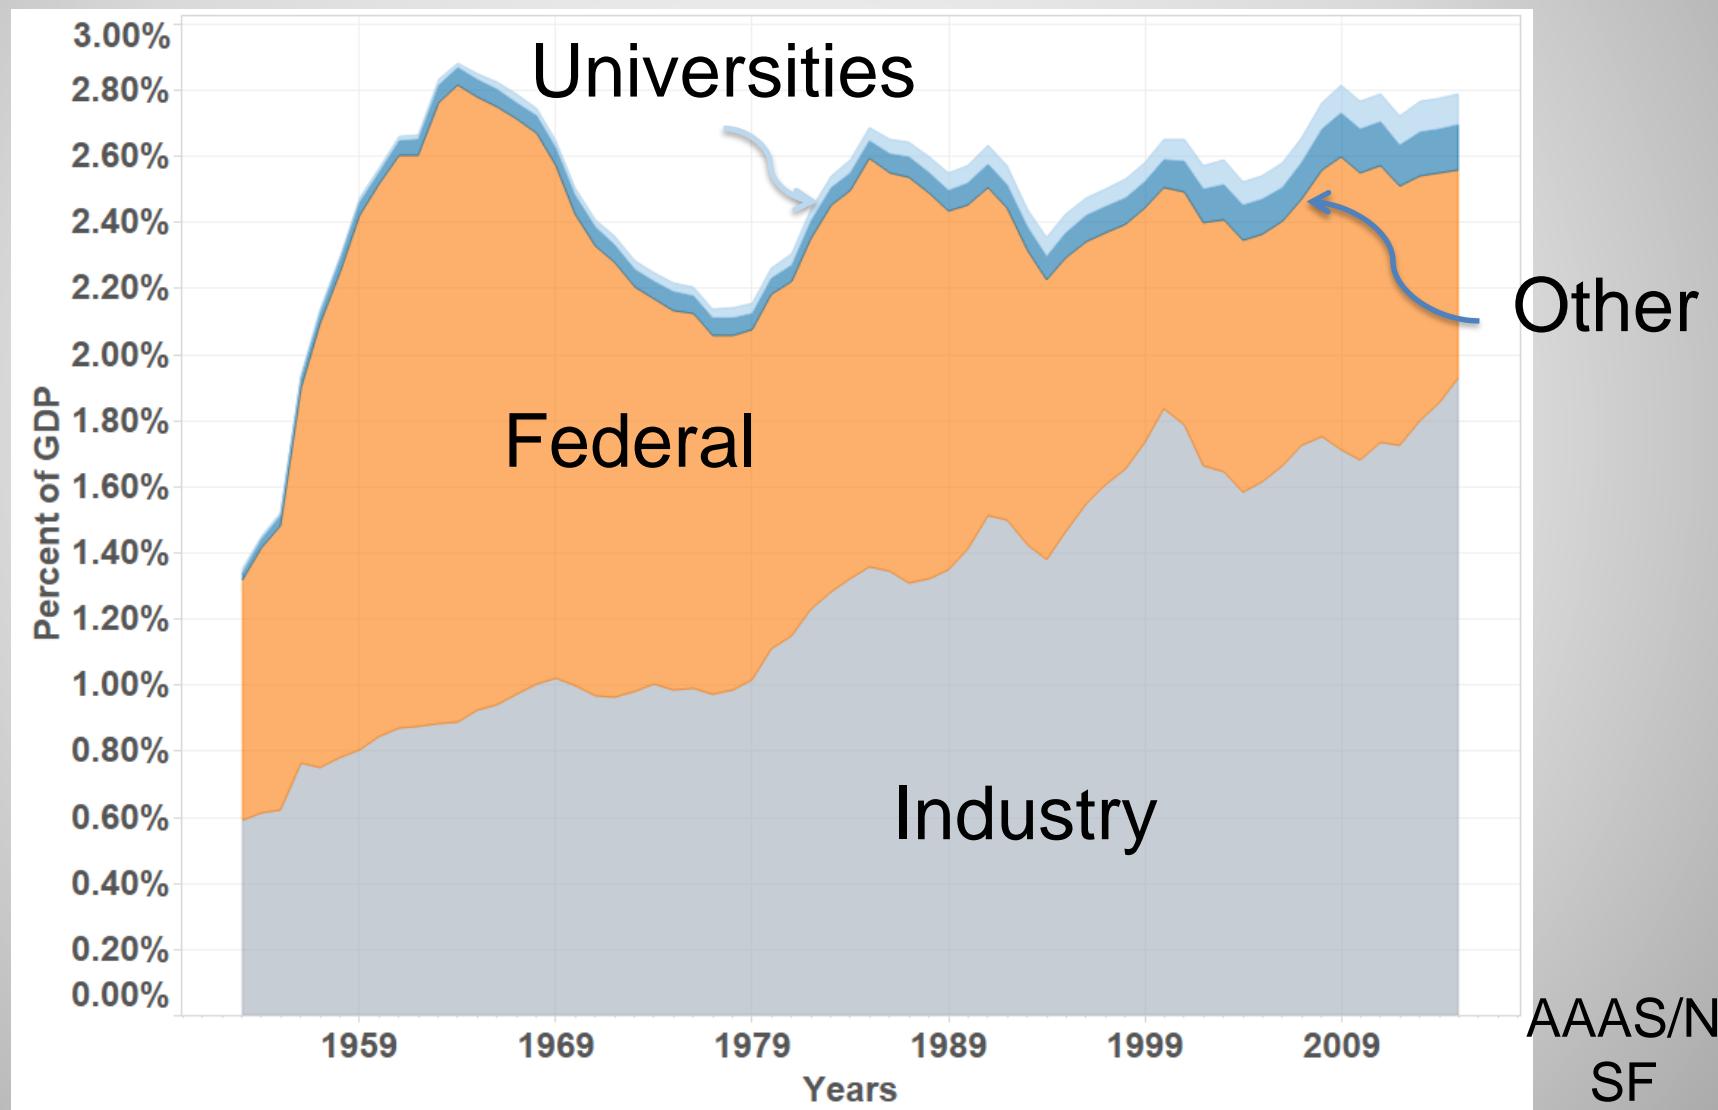

...though space weather, planetary defense, planetary protection, SETI, etc. are stretching us further over here.

Yes
Quest for
Fundamental
Understanding?
No

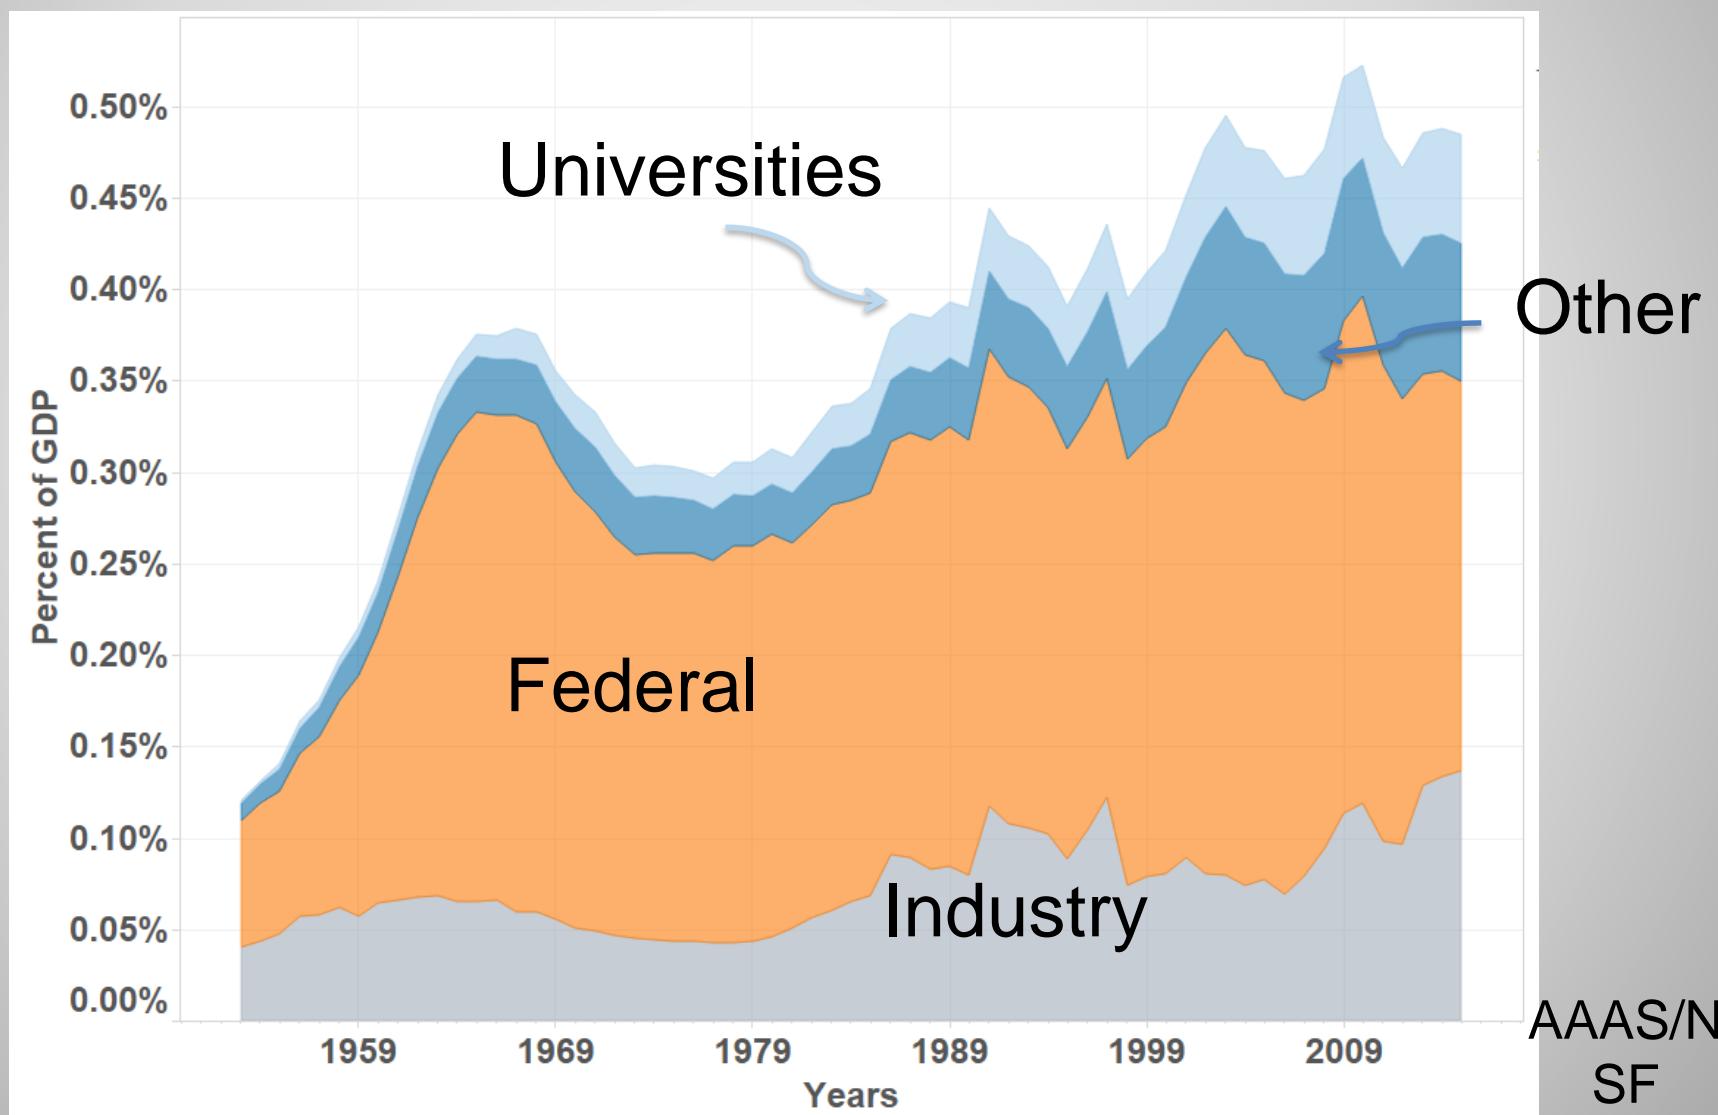

Considerations of Use?

All R&D Funding Sources in the U.S.

Basic Research Funding Sources in the U.S.

The Federal Government of the United States

The diagram illustrates the interaction between the Federal Government of the United States (represented by a large blue circle) and an individual researcher (represented by a blue circle labeled "You"). The researcher is connected to several external entities and concepts, each represented by a colored box: Students/Education (green), Publications (orange), Data (purple), Collaborations (pink), and Policy and Regulation (teal). Arrows indicate the flow of information or resources between the researcher and these entities. The researcher also receives "Funding" from the government, and the government receives "Proposals" from the researcher.

FUNDERS

Department of Energy > Office of Science > High Energy Physics Division > Cosmic Frontier Program

NASA > Science Mission Directorate > Astrophysics Division

NSF > Research and Related Activities > Mathematical and Physical Sciences Directorate (MPS) > Astrophysics Division (AST)

NSF > Major Research Equipment and Facilities Construction (MREFC)

Private Foundations (e.g., Carnegie, Simons, etc.)

CONGRESSIONAL OVERSIGHT

House of Representatives

Appropriations Subcommittees:
Commerce, Justice, and Science
Energy and Water

Authorization Committee:
Science, Space, and Technology

Senate

Appropriations Subcommittees:
Commerce, Justice, and Science
Energy and Water

Authorization Committees:
Commerce, Science, and
Transportation
Energy and Natural Resources

OPERATORS

Industry (e.g., Lockheed Martin, Ball, Northrop Grumman)

Contractors/Managing Organizations (e.g., AURA, USRA, AUI)

Institutions (e.g., universities, NASA centers, private labs)

ADVISORS

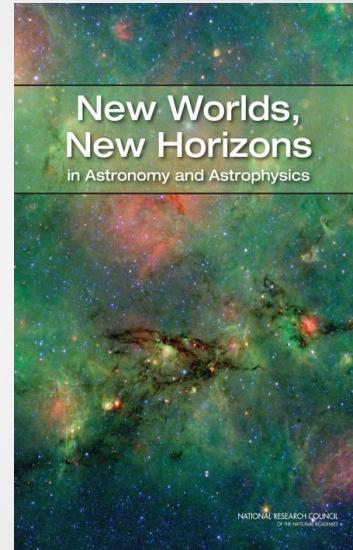

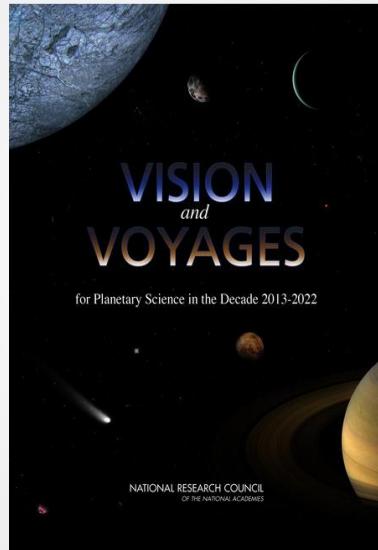

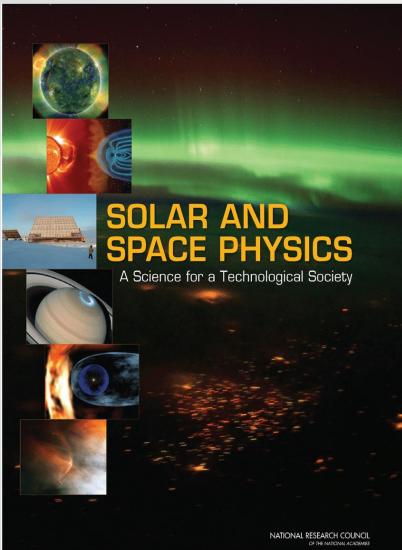

Agency Advisory Committees

National Academies (e.g., SSB, BPA, CAA, CORF, ad hoc studies)

Scientific Societies (e.g., AAS)

Lobbyists (of operators)

Critical Inputs/Rulers

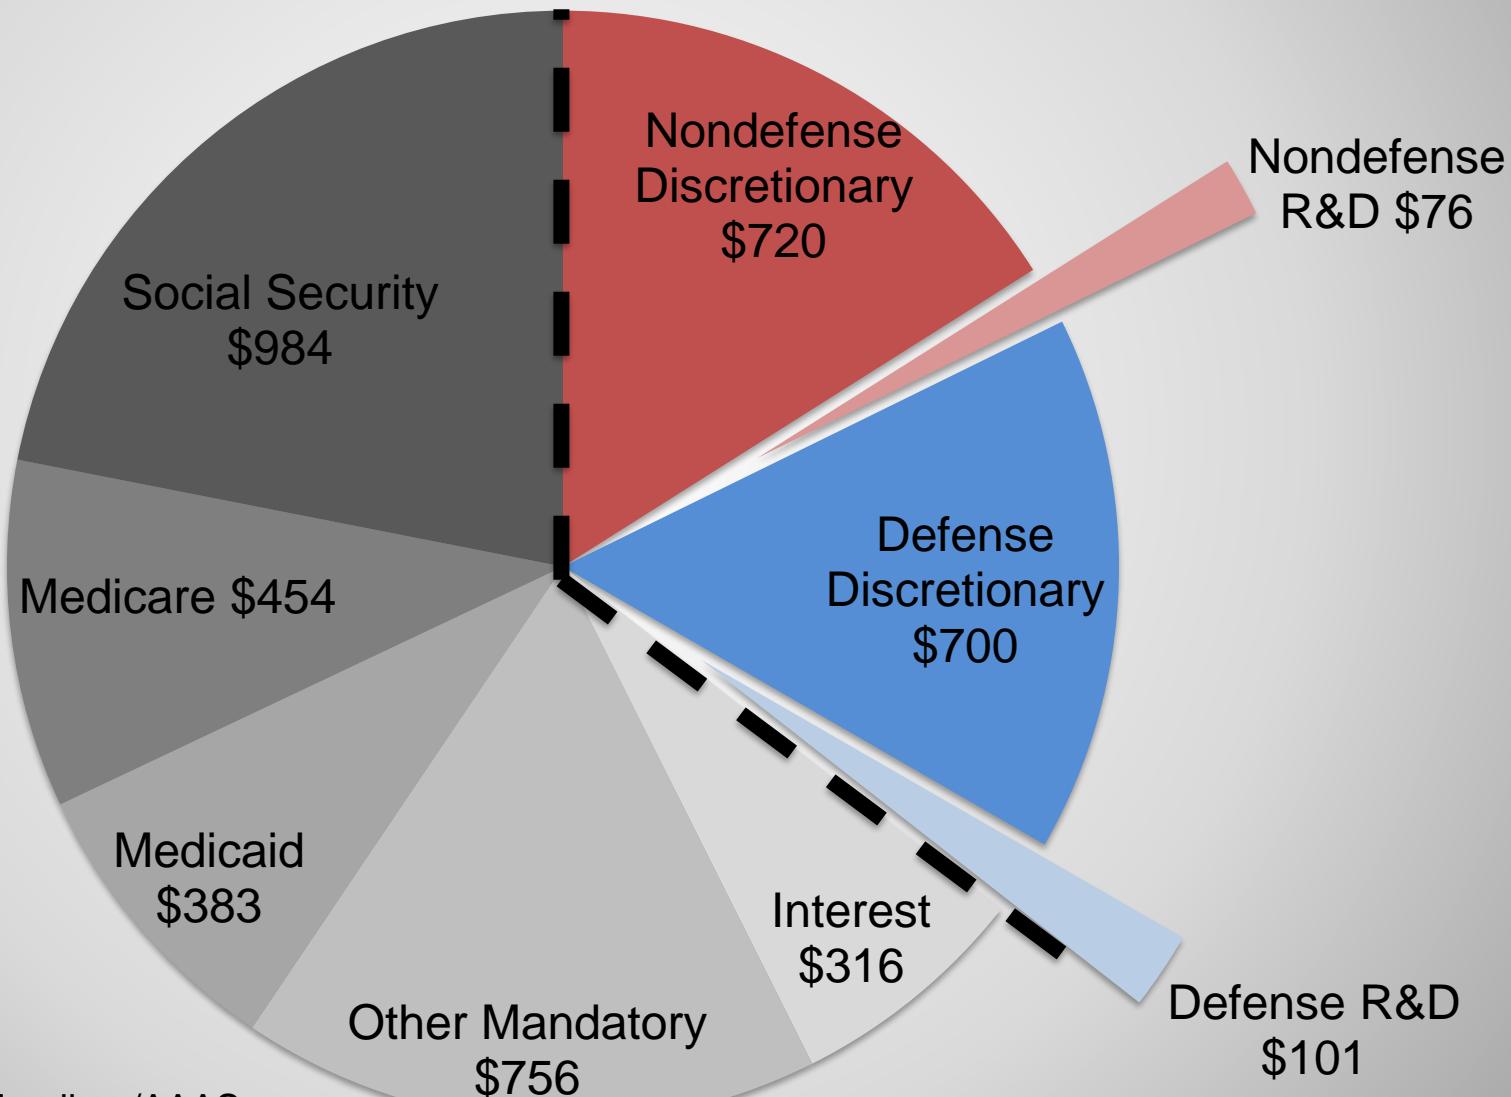

Community-based priority setting

How it works: Federal (science) budget process

With significant attribution to Matt Hourihan/AAAS

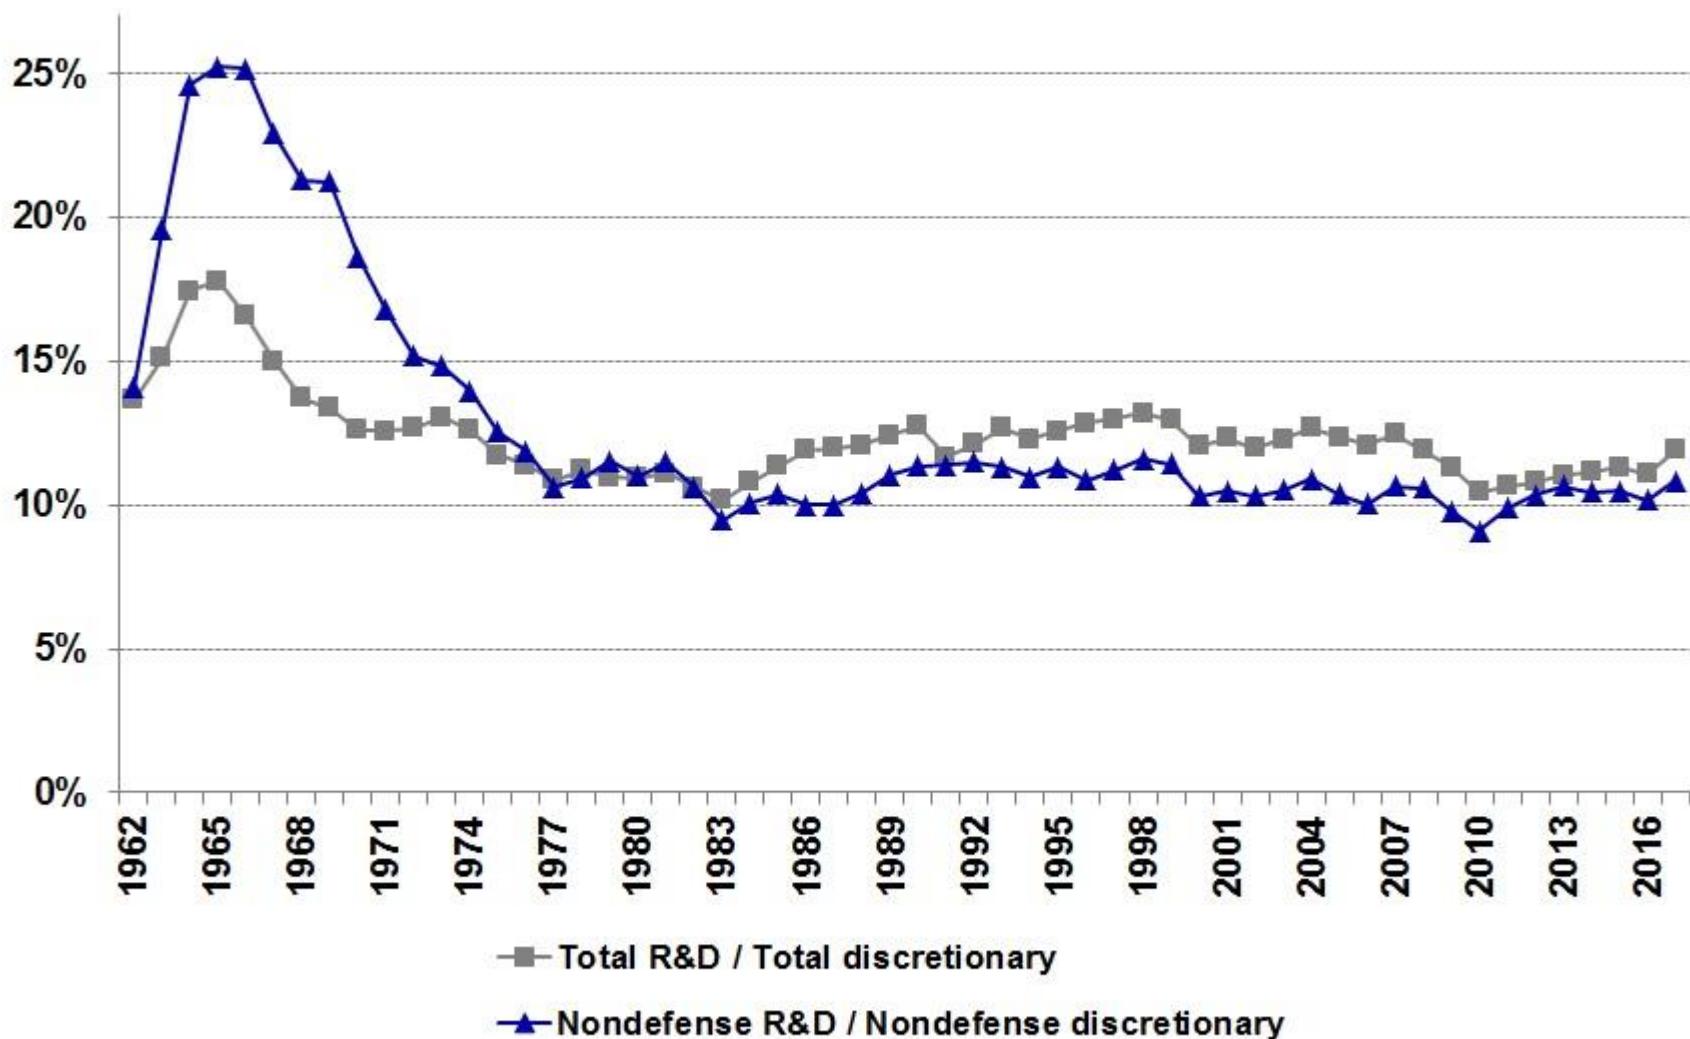

Federal Budget: FY 2018

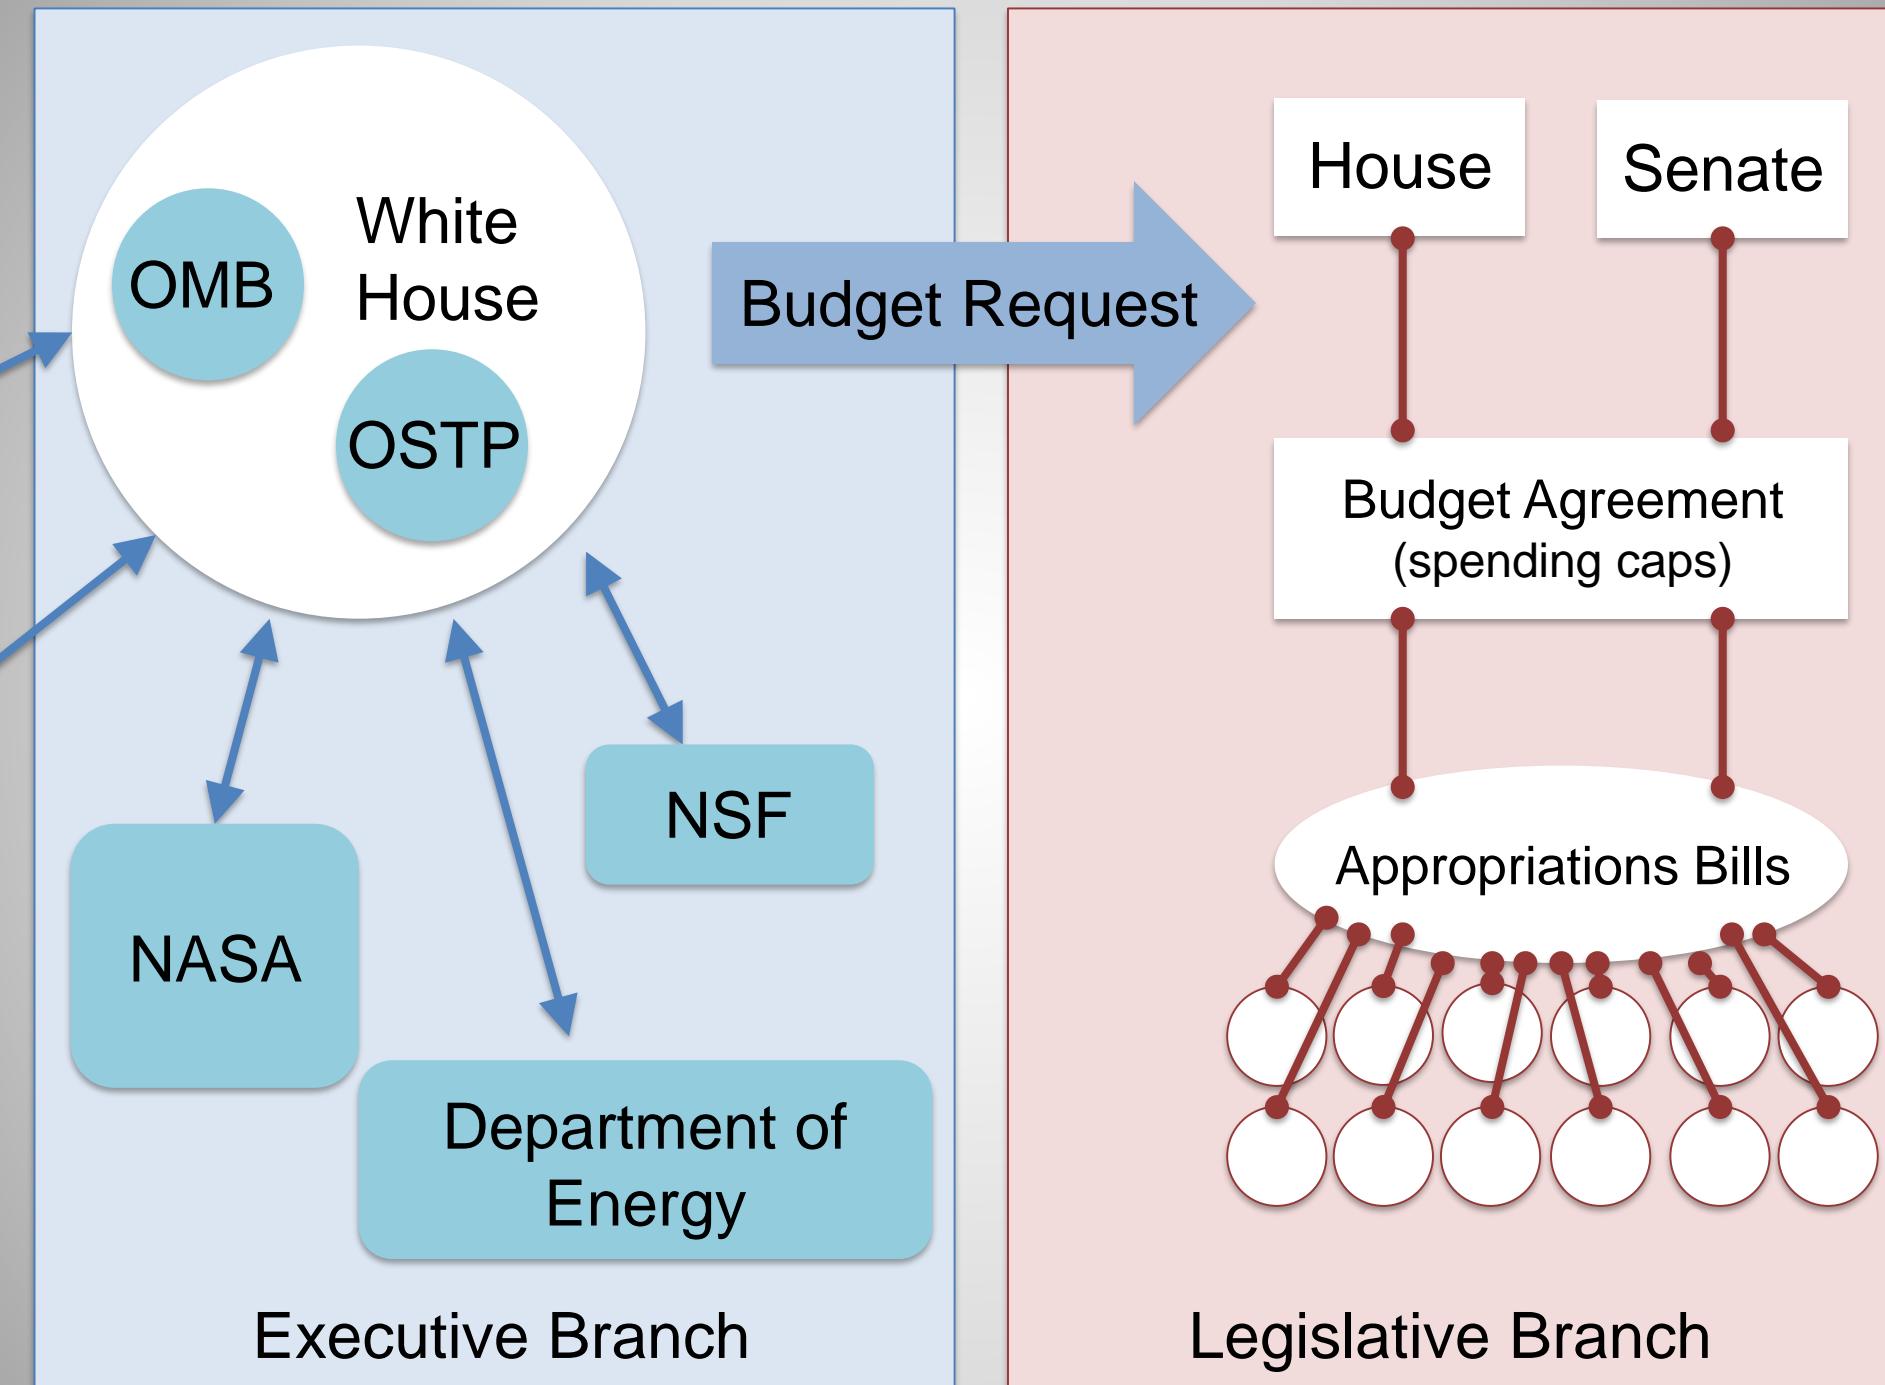

Total outlays: \$4.4 trillion

R&D as Percent of Discretionary Spending

percentage of outlays, 1962 - 2017

tl;dr:

The President Proposes, Congress Disposes.

Government Accountability Office (GAO), February 2018

**Where we are: Funding,
legislation, and major issues in
astronomy policy right now**

Science Budgets from the Trump Administration

*Flat in the FY19 request. *Includes renewables and efficiency, nuclear, fossil, grid research, cybersecurity, ARPA-E. | AAAS

Astronomy in the 109th Congress

- Largely rejecting Trump proposed cuts to basic science
- Significant interest in **search for life**
 - Added to over-arching NASA mission in 2017 NASA Transition Authorization Act
 - Exoplanet and Astrobiology Science Strategy studies
 - Europa Clipper + Lander
 - SETI/Technosignatures
- Generally supportive and interested

Non-Defense Discretionary Funding Increases Under Bipartisan Deal Yet Remains Below 2010 Level

In billions of 2018 dollars

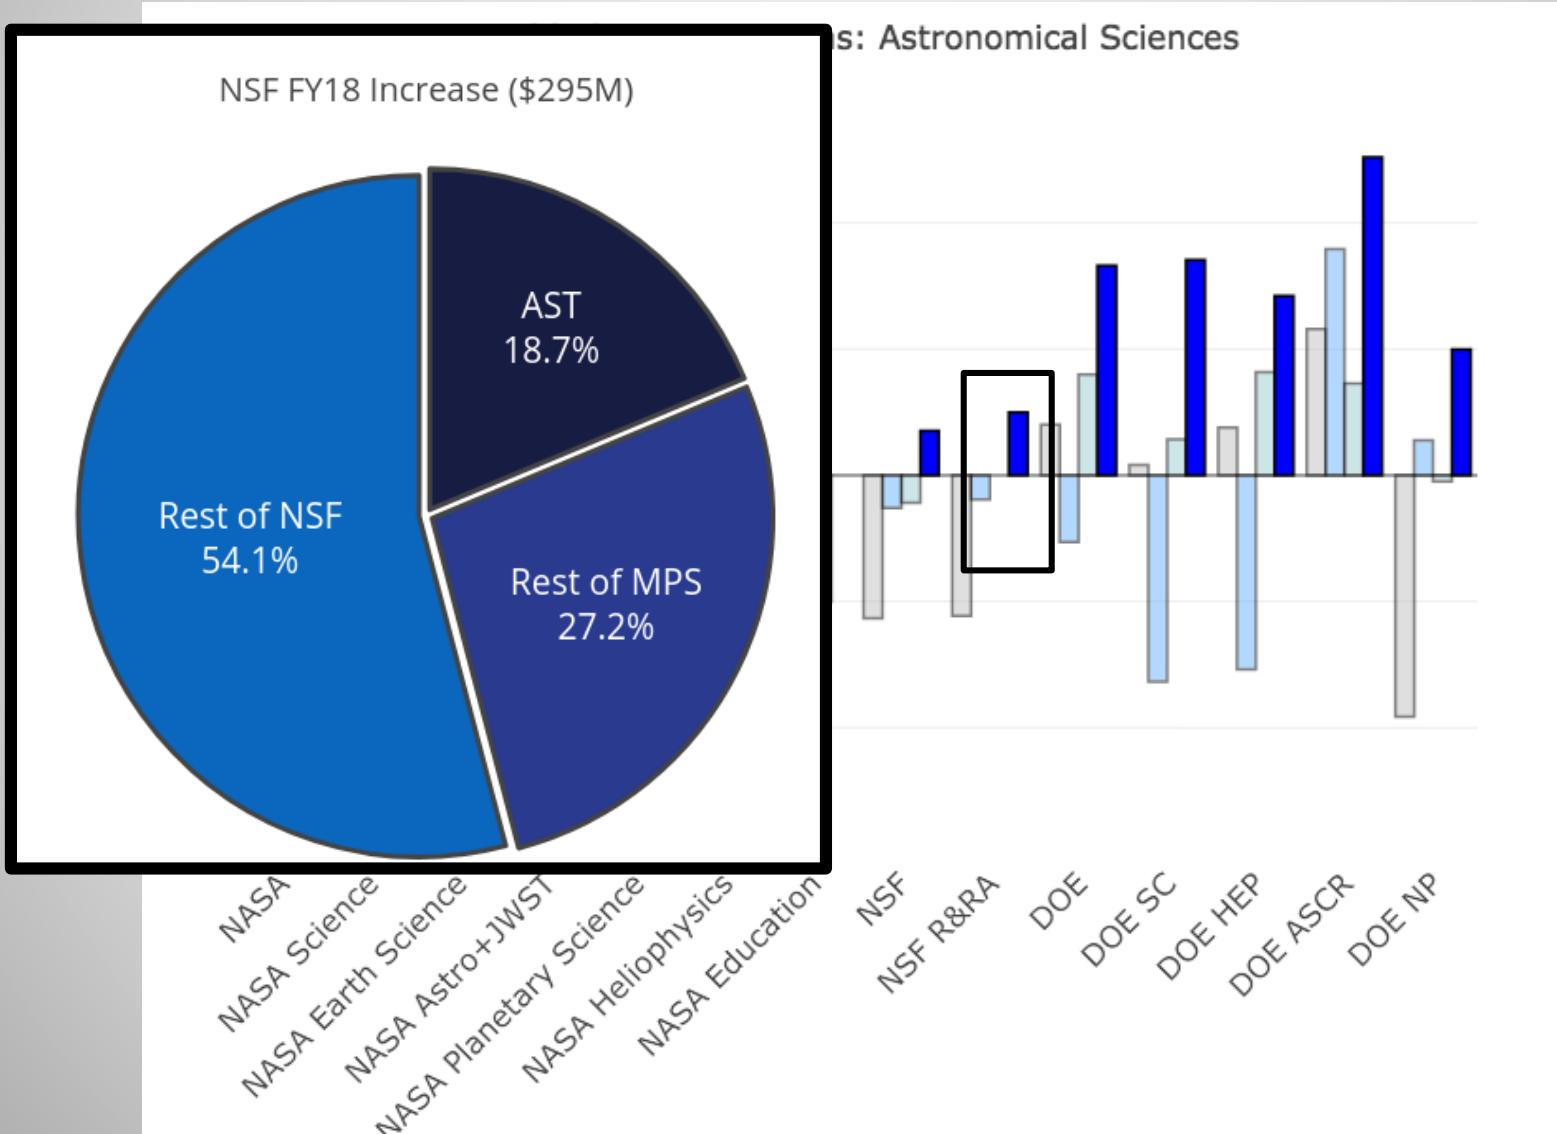

Note: All amounts exclude funding for disasters, emergencies, program integrity, and Overseas Contingency Operations (OCO).

Source: CBPP analysis of data from the Congressional Budget Office, Office of Management and Budget, and announced agreement for 2018 and 2019

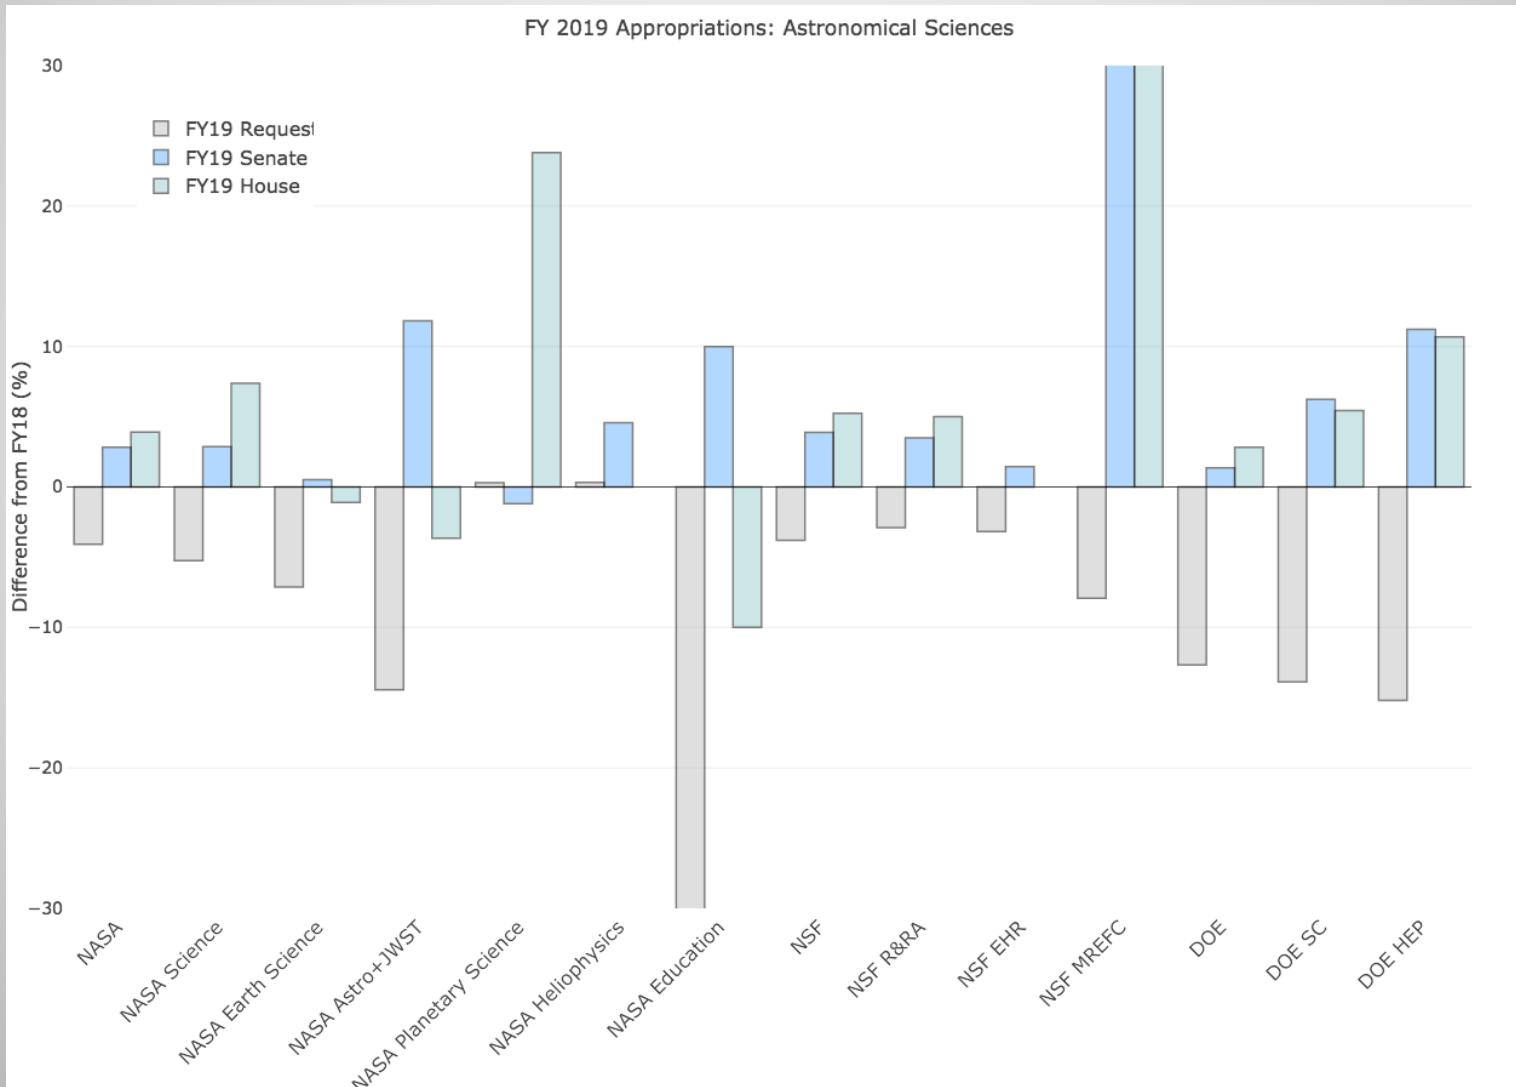

Astronomy in the 109th Congress

FY2018 Funding: Good news

Astronomy in the 109th Congress

FY2019 Funding: TBA (CR through Dec 7)

Astronomy in the 109th Congress

Successful bills and still-active legislation

- *(Passed, technically 108th)* **American Innovation and Competitiveness Act (AICA)**
- *(Passed)* **2017 NASA Transition Authorization Act**
- *(Passed)* **Energy Research and Innovation Act**
- *(Still Active)* **2018 NASA Authorization**
- *(Still Active)* **Space Weather Research and Forecasting Act**
- *(Still Active)* **Combating Sexual Harassment In the Sciences Act**, Introduced 5 October 2018

Major Issue: JWST (NASA Astrophysics)

Current launch date: March 30, 2021

Budget shortfall: **\$490 million over two years** (FY20-21)

NASA has a proposal for addressing the budget shortfall, but it will not be public until the FY20 budget request. From NASA Astrophysics Division Director Paul Hertz to AAAC (September):

- Principles
 - NASA understands the Decadal Survey priorities
 - NASA will protect the Explorer and R&A Programs
- NASA believes that the anticipated cost growth on Webb is likely to impact other science missions

Major Issue: JWST (NASA Astrophysics)

Current launch date: March 30, 2021

Budget shortfall: **\$490 million over two years** (FY20-21)

NASA has a proposal for addressing the budget shortfall, but it will not be public until the FY20 budget request. From NASA Astrophysics Division Director Paul Hertz to AAAC (September):

- Principles
 - NASA understands the Decadal Survey priorities
 - NASA will protect the Explorer and R&A Programs
- NASA believes that the anticipated cost growth on Webb is likely to impact other science missions

Does this mean only within Astrophysics, or other SMD division missions?

**2011 JWST Rebaseline Lifecycle Cost:
\$8.835 Billion**

Development Cap: \$7.998 B

Operations Estimate:
\$837 M

\$200 M
Remaining
Reserves

\$310 M
Intended FY19 – FY21
Operations Budget

**\$490 M
FY20 -21 Budget Shortfall**

\$23 M
Operations
Adjustment for
Inflation

**2018 JWST New Baseline Lifecycle Cost:
\$9.663 Billion**

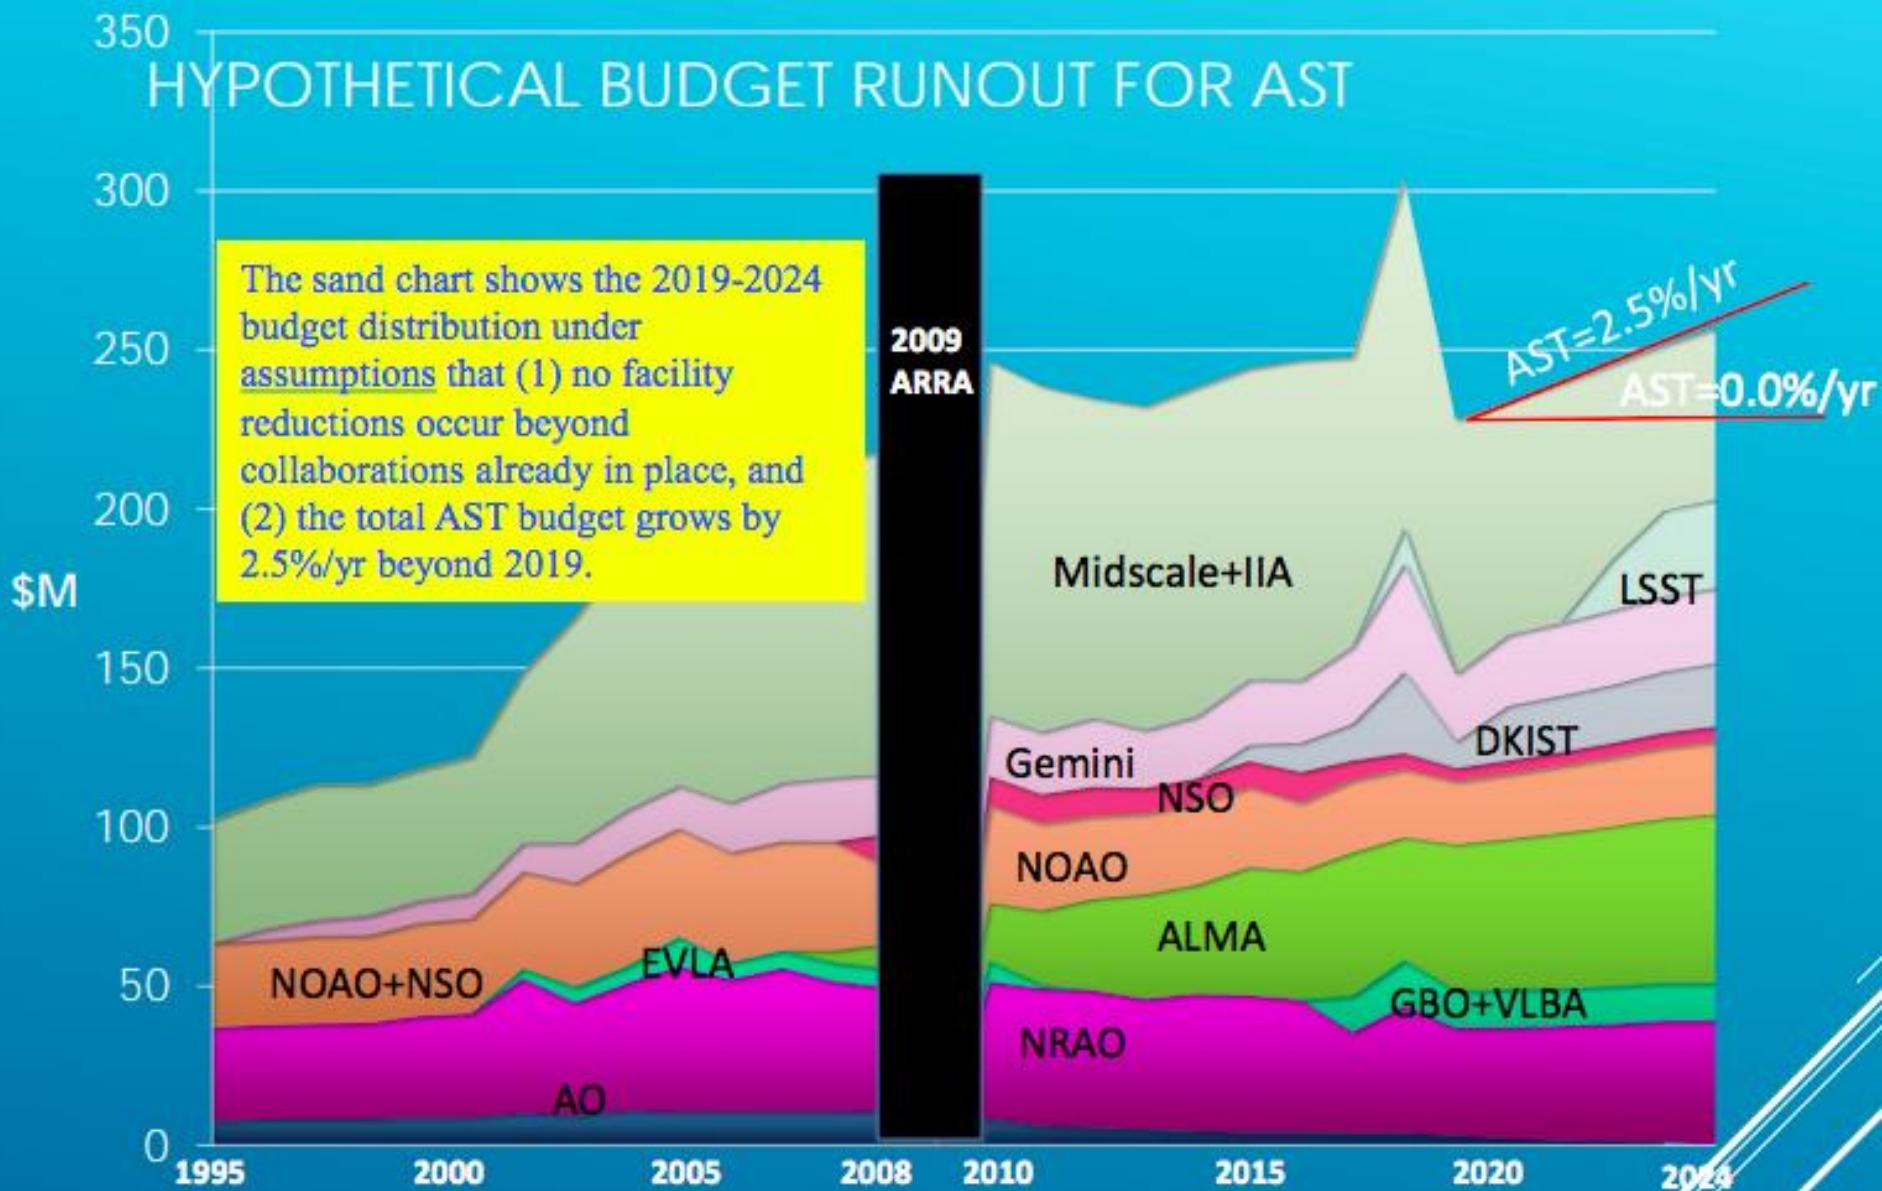

Major Issue: WFIRST (NASA Astrophysics)

A timeline of community input:

- 2011: Top-priority large space mission in Astro2010
- 2012: NASA receives gift telescope assemblies
- 2013: Harrison Report (National Academies)
- 2016: Astrophysics Midterm Review
- 2017: WIETR
- 2018: Proposed Cancellation

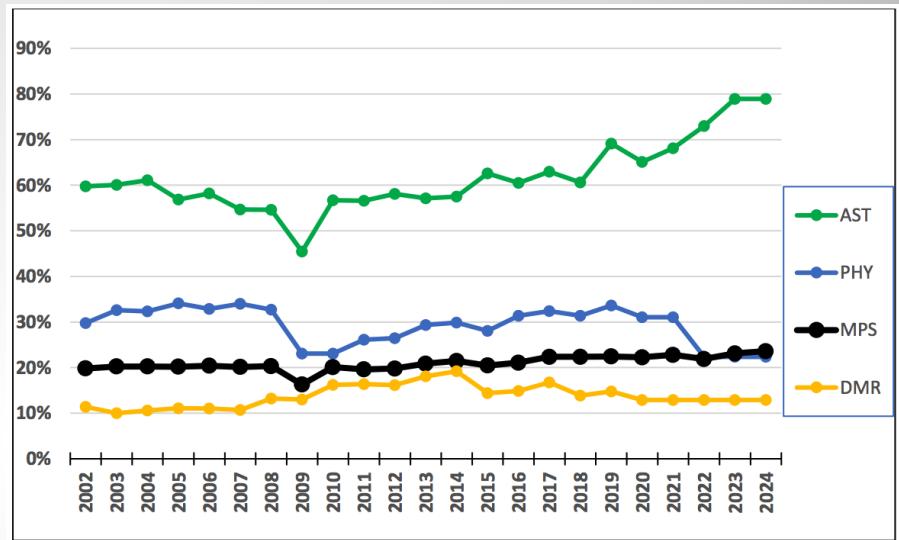

Bottom line: project still proceeding as if it will launch in 2025. Coronagraph is a tech demo. Starshade compatibility maintained. Cap is \$3.2 B (for now).

Major Issue: NSF Facilities Operations & Maintenance

Major Issue: NSF Facilities Operations & Maintenance

- NSF funds **construction costs only** of major (>\$75 million) through the agency-wide Major Research Equipment and Facility Construction (MREFC) account
- **Operations and maintenance costs (O&M)** are borne by the division (or directorate) using the facility
- For last 10 years, NSF budget has been flat, even as costs to build, operate, and maintain leading-edge facilities has grown.
- This model necessitates having major projects lined up maintain the budget line (a feature, not a bug)
- Astronomy in particular has and continues to face mounting pressures on grants and O&M costs. Right now, there is not space in the NSF AST budget for the coming LSST “wedge.”
 - Recent NSB report, “Study of O&M Costs for NSF Facilities” (May)

Science/Astronomy in Congress

In general

What motivates a member of Congress?

- Media
- Personal Conviction/Issues
- District

Science/Astronomy in Congress

In general

Given the generally **bipartisan support** of basic research, particularly for astronomy, and the **relatively small size of the necessary budgets**, individual members of Congress with the right combinations of personal conviction and district interest can have **significant impact** on the policies funding and governing astronomy...

...for better or for worse.

Some examples:

- Senator Robert Byrd (D-WV) (Green Bank and NSF MREFC)
- Senator Barbara Mikulski (D-MD) (HST and JWST)
- Senator Richard Bryan (R-NV) (canceling SETI)
 - But Representative Lamar Smith (R-TX) might succeed in bringing SETI back
- Representative John Culberson (R-TX) (Europa Clipper+Lander)

Science/Astronomy in Congress

In general

Given the generally **bipartisan support** of basic research, particularly for astronomy, and the **relatively small size of the necessary budgets**, individual members of Congress with the right combinations of personal conviction and district interest can have **significant impact** on the policies funding and governing astronomy...

...for better or for worse.

Engagement with policymakers on astronomy policy thus represents an **opportunity and a responsibility** unique even just within science policy.

**What you can do: opportunities for
astronomers to get (more)
engaged in astronomy policy**

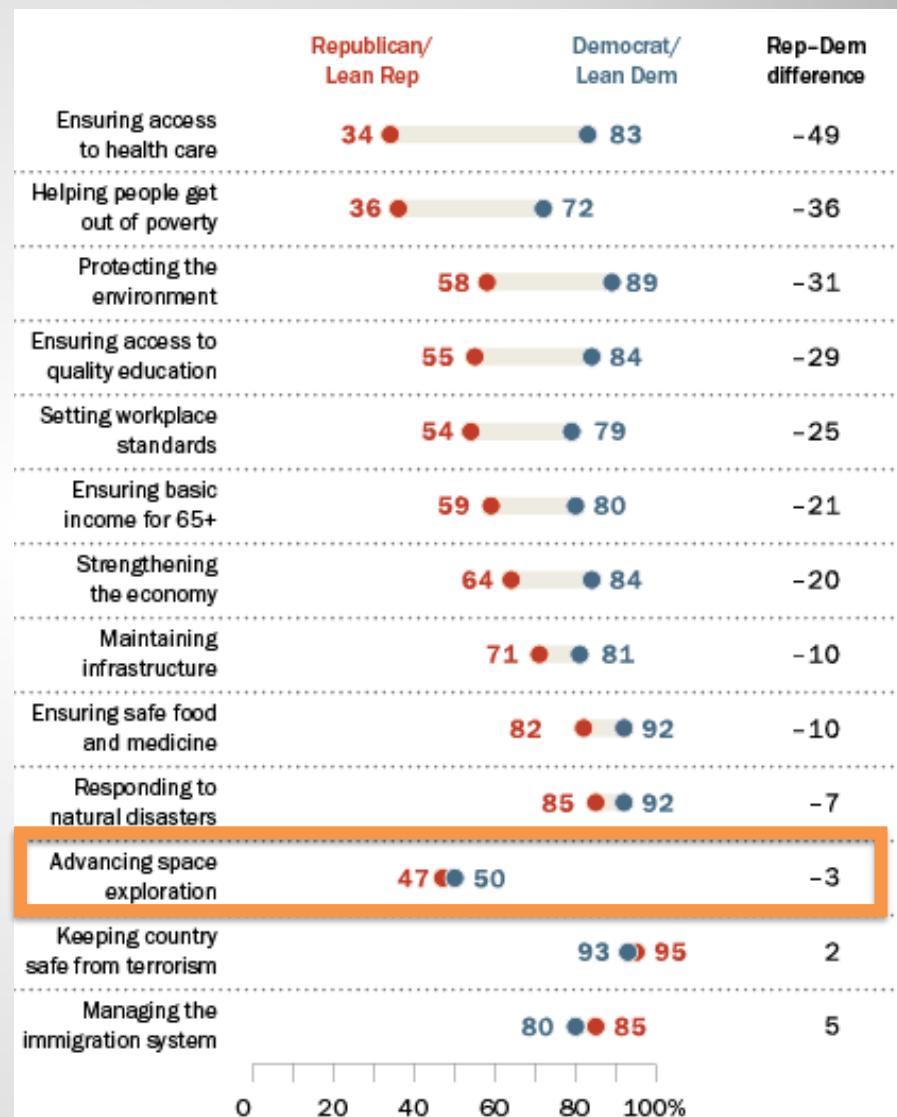

In general, science and engineering enjoy a broad base of support!

The only reason that science lacks support is that **other priorities rank higher**.

People who say the government should have a major role in...

In general, science and engineering enjoy a broad base of support!

The only reason that science lacks support is that **other priorities rank higher.**

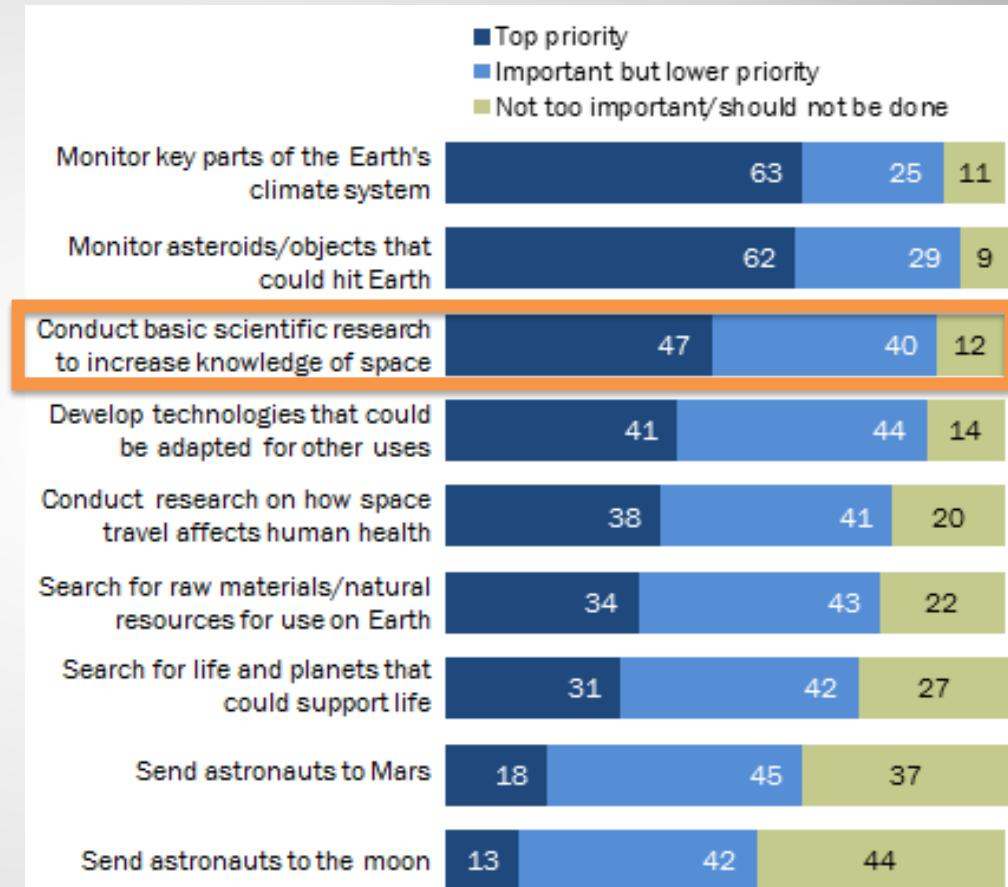

Survey conducted Aug. 27-Oct. 4, 2015. Q71.

PEW RESEARCH CENTER

% of U.S. adults who say each of the following should be a top priority for NASA:

In general, science and engineering enjoy a broad base of support!

The only reason that science lacks support is that **other priorities rank higher.**

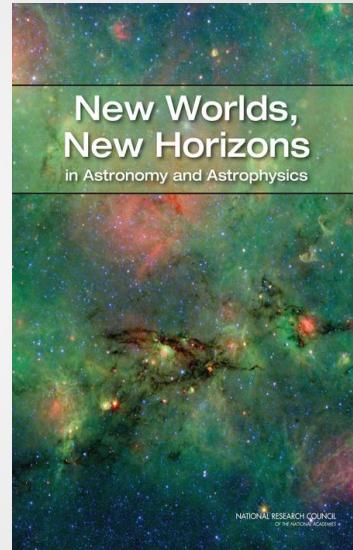

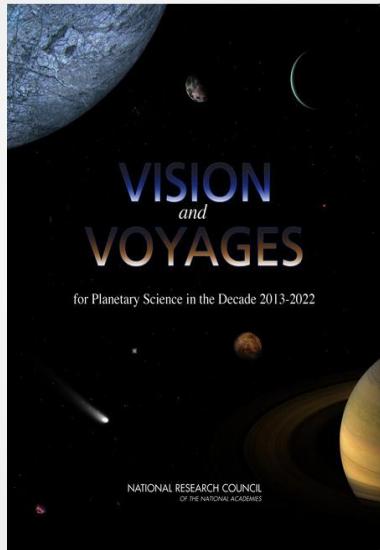

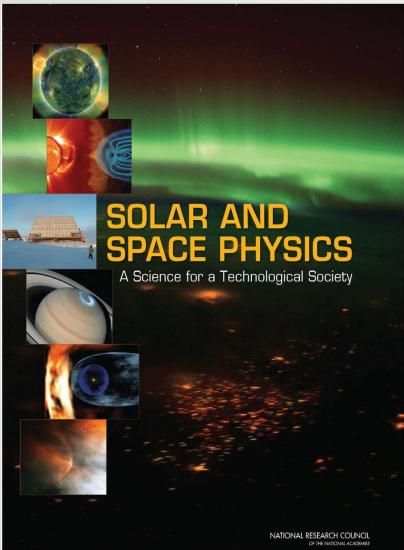

Note: Respondents who did not give an answer are not shown.

Source: Survey conducted March 27-April 9, 2018.

"Majority of Americans Believe It Is Essential That the U.S. Remain a Global Leader in Space"

PEW RESEARCH CENTER

Critical Inputs/Rulers

Community-based priority-setting

Want to do something?

Actions to take

1. Serve on an advisory committee

1. Federal: Every division, directorate, agency has them
2. Non-governmental: observatory users' committees, boards of operators/nonprofits, institutional committees, etc.
3. Usually have to be at a faculty level, but not always for subcommittees
4. Start by listening to their public meetings

2. Talk to your elected officials

1. Professional societies organize coordinated visits with training
2. Invite your representatives to visit your institution
3. Get to know your university's Federal Relations Office

3. Get organized

1. Start/join a local chapter of a science policy organization.

Want to do something?

Places to start

1. Organizations you're already in

- Professional Societies
- Institutional Federal Relations Office

2. (Some) Organizations you may want to check out

- Nonpartisan/Non-activist (mostly)
 - American Association for the Advancement of Science (AAAS)
 - Engineers and Scientists Engaging in Policy (ESEP)
 - Engineers and Scientists Acting Locally (ESAL)
- Lean partisan/activist (arguably, in some cases)
 - March for Science
 - 500 Women Scientists
 - [Science for the People](#)
 - Union of Concerned Scientists

3. News sources for astronomy+ policy news

- American Institute of Physics (AIP) FYI
- SpaceNews
- SpacePolicyOnline
- AAS Policy Blog

Want to do more?

Actions to take

1. Student (undergrad/grad) opportunities

1. Birkner Fellowship (Space Studies Board)
2. Mirzayan Fellowship

2. Post-PhD (Postdoc/faculty) opportunities

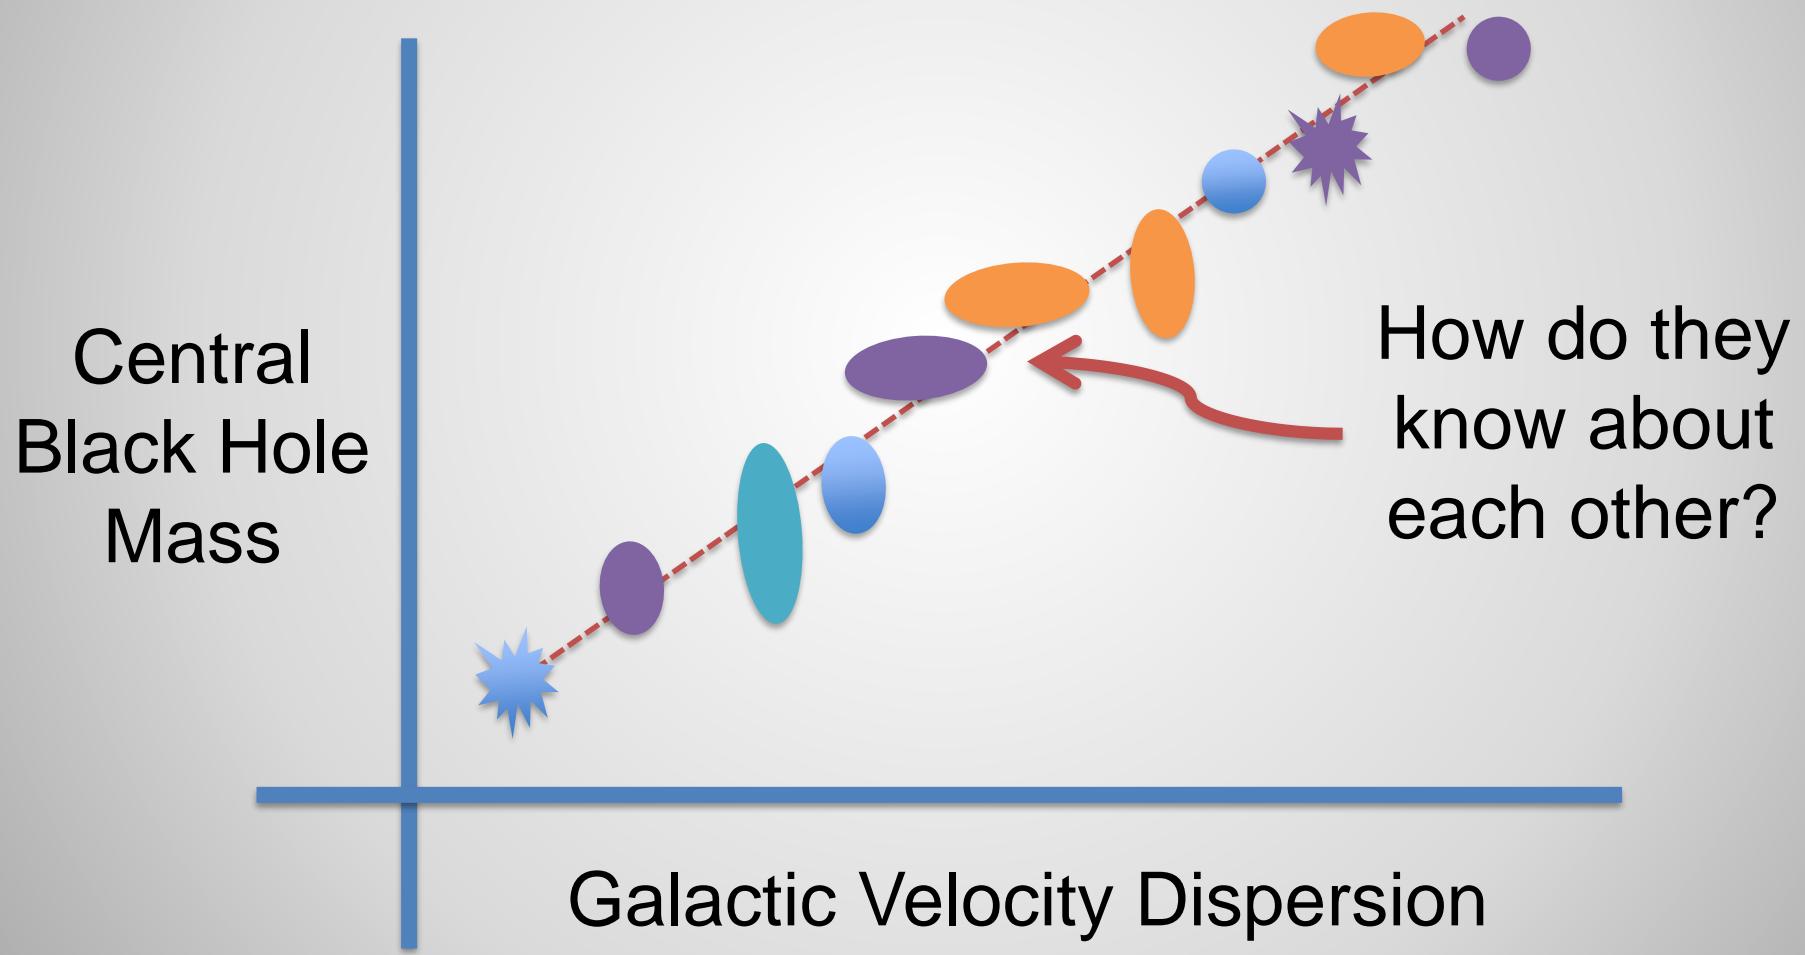

1. AAAS Science and Technology Fellowship Program
 1. Congressional and Executive Branch
 2. Can go through AAAS or some individual societies
2. California Science and Technology Policy Fellowship
3. Agency rotator (Intergovernmental Personnel Act)

Want to do even more? (careers in science policy)

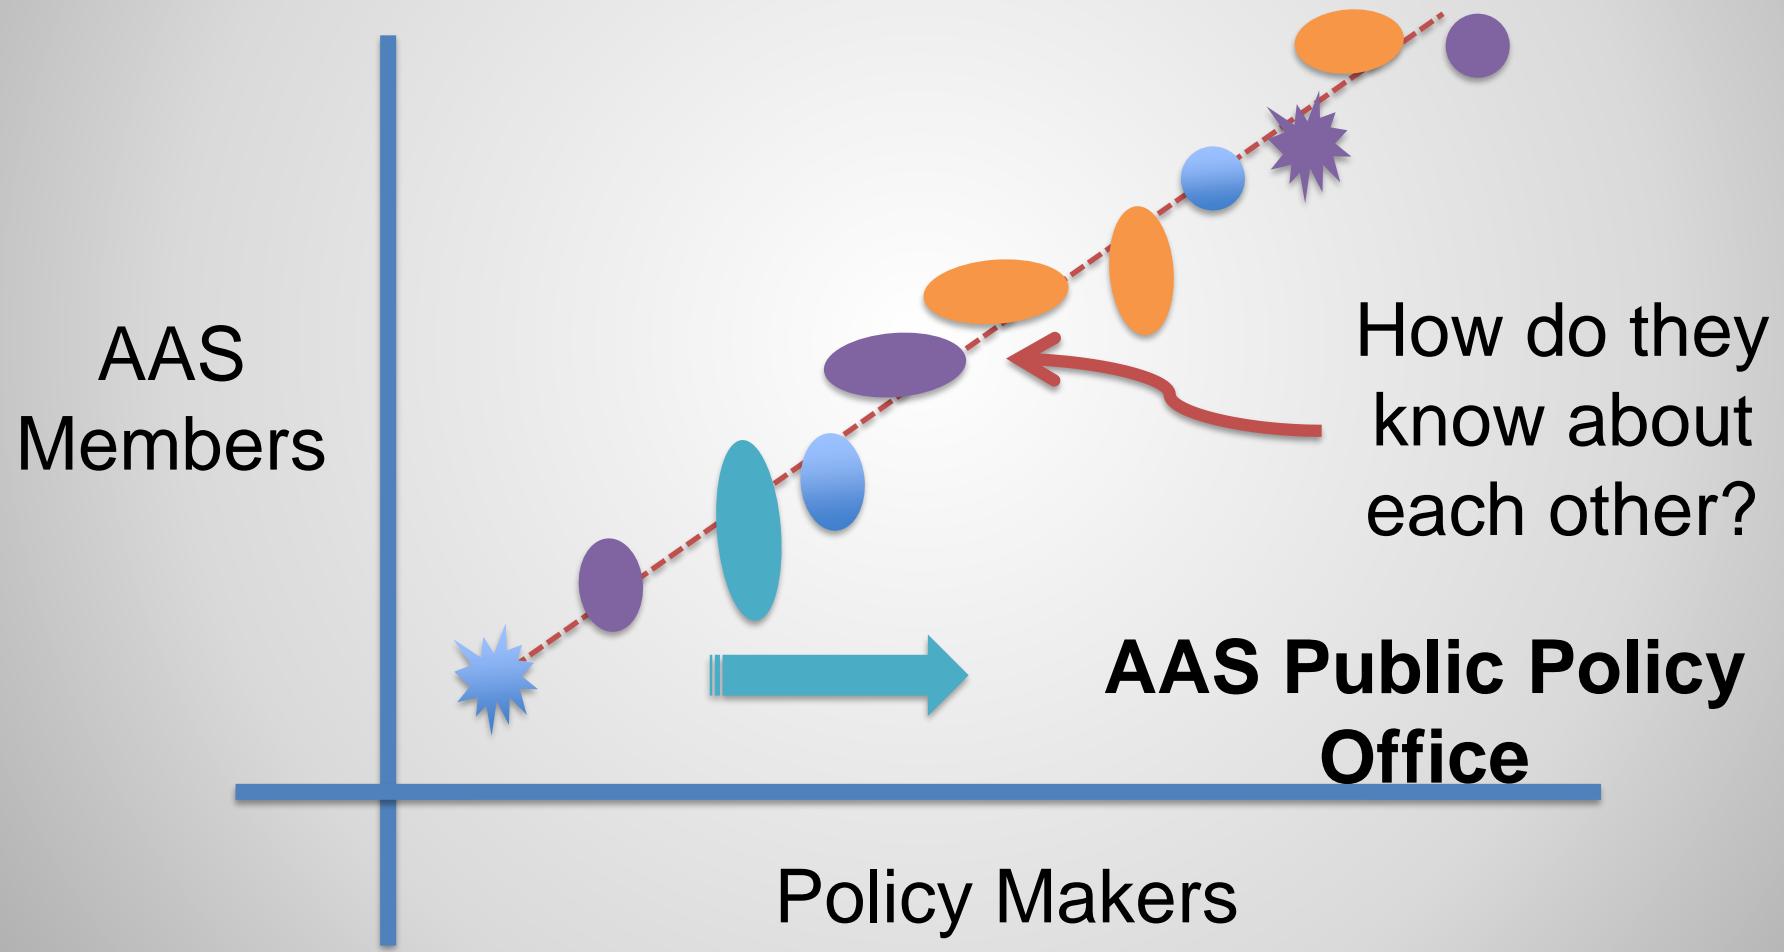

1. Executive Agencies
 1. Science agencies
 2. Regulatory/service agencies
2. Congressional Research Service
3. Office of Management and Budget
4. Congressional Staffer
5. Advocacy Organizations
6. Professional Societies
7. Be an Elected Official

Policymakers

Advocacy at the AAS: Policymakers

Our messages to policymakers are often coordinated with science and research coalitions.

- Physical Sciences Education Coalition (PSEPC)
- Task Force on American Innovation (TFAI)
- Coalition for Aerospace and Science
- Coalition for the NSF (CNSF)
- USCAS
- GATF

Talking to your elected officials

- Be an example of the science work being done in your district/state.
- Tell them about your work/education and about **the role of federal support** in that work.
- Politics is *always* local.

AAS Congressional Visits Day

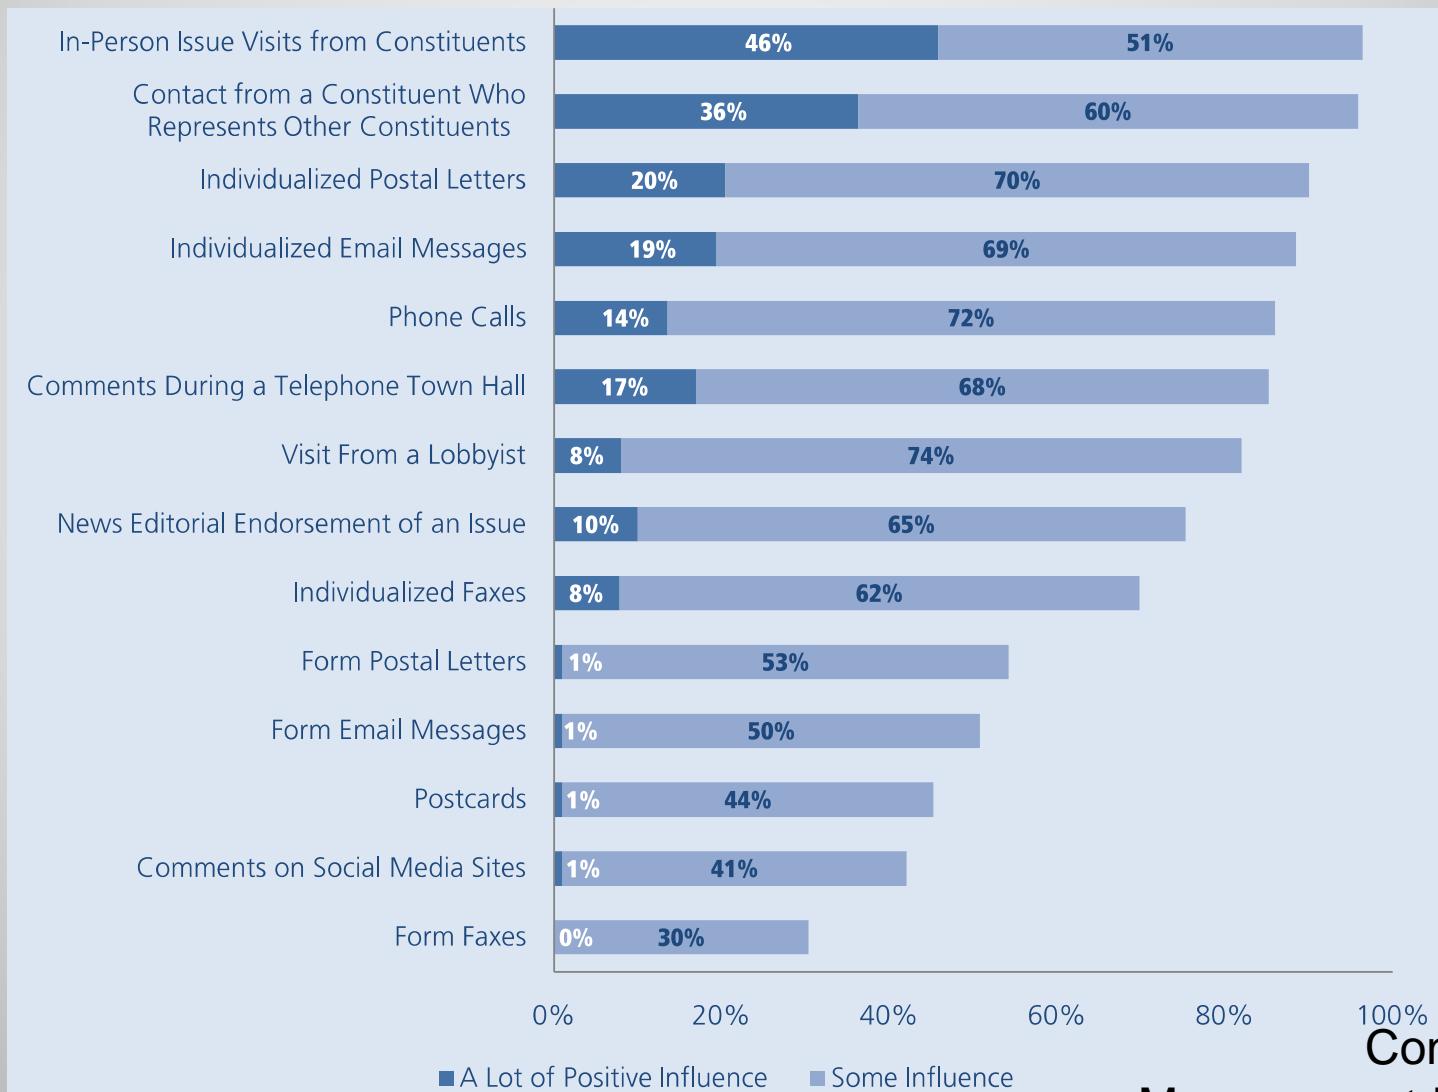

2016

2017

**As a private citizen, you
are never a lobbyist.**

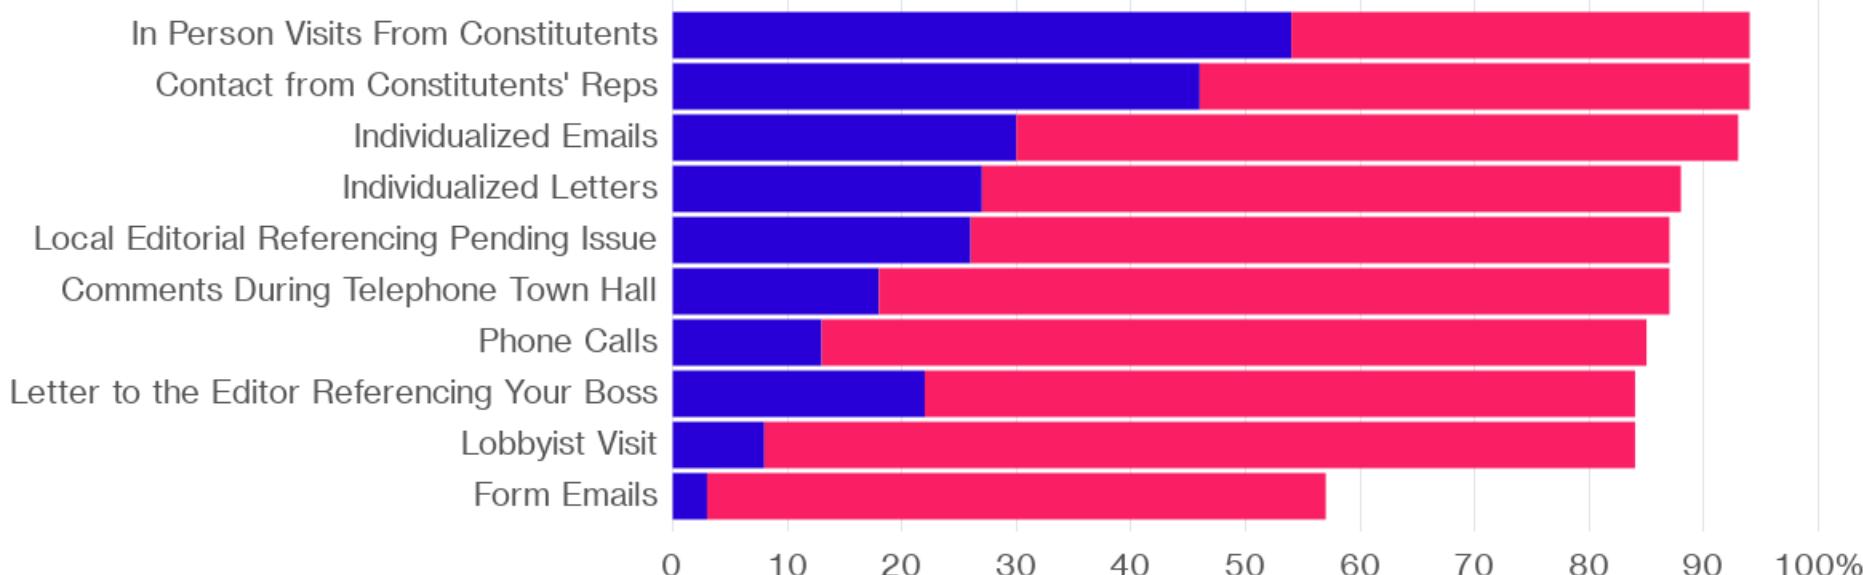

If a Member/Senator has not already arrived at a firm decision, how much influence might different advocacy strategies in the DC office have?

Want To Be Heard? Show Up!

Influence on Washington D.C.-based congressional staffers by communication type.

■ A Lot of Positive Influence ■ Some Positive Influence

Source: Congressional Management Foundation

*Bars do not add up to 100 because not all surveyed categories are displayed

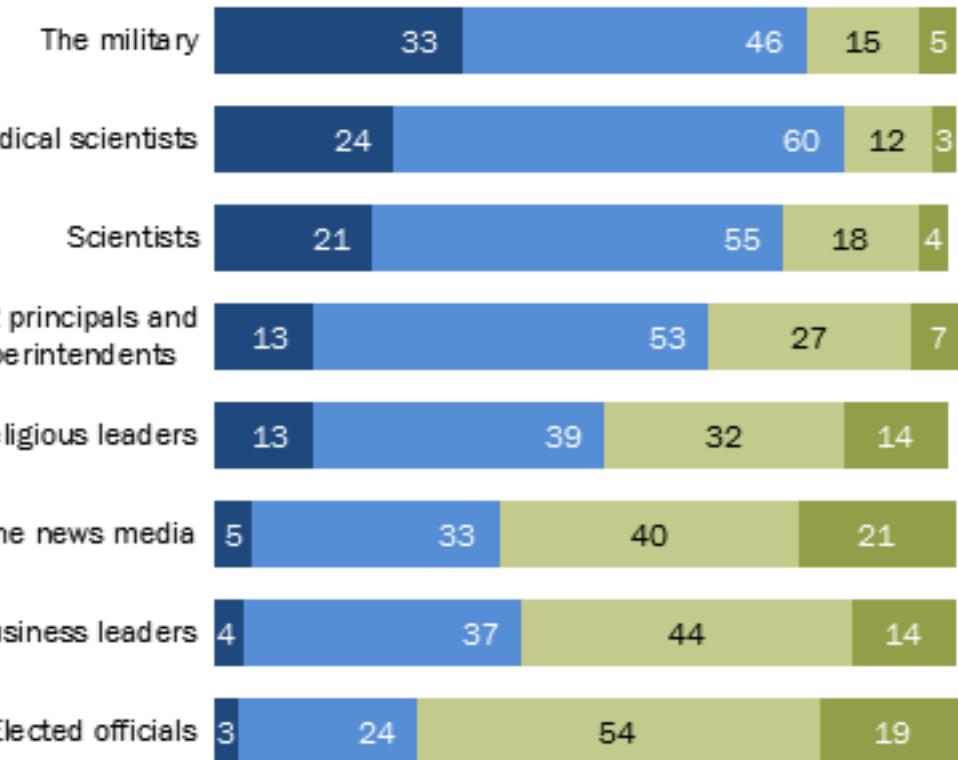

Bloomberg

The public trusts scientists!

Americans' trust in military, scientists relatively high; media, business leaders, elected officials low

% of U.S. adults who say they have ____ of confidence in each of the following groups to act in the best interests of the public

■ A great deal ■ A fair amount ■ Not too much ■ No confidence

Note: One-third of respondents randomly assigned to rate "medical scientists"; two-thirds randomly assigned to rate "scientists." Other questions asked of all. Respondents who did not give an answer are not shown.

Source: Survey conducted May 10-June 6, 2016.

Advocating for Science

1. Do no harm

- We don't advocate cutting other science/projects. If one discipline is targeted, we all lose.
- We don't advocate partisan solutions
- We don't present science as an entitlement

2. Remember your audience

3. Your reputation as a scientist **matters**

National Science Board (NSB) National Science and Engineering Indicators 2018

Gross domestic expenditures on R&D as a share of gross domestic product, by the United States, the EU, and selected other countries: 1981–2015
